

JULY ONE Biology: The Interaction of Facts and Ideas

Science as Inquiry

3

How the scientific method works · 1-1 Scientists deal with problems, 3 · 1-2 Science is like detective work, 4 · 1-3 The creative part of science, 4 · A famous prediction · 1-4 How are coral islands formed?, 5 · 1-5 Darwin's hypothesis contains a prediction, 6 · 1-6 Darwin's prediction is tested, 6 · The work of Darwin · 1-7 Scientists collect facts through observation, 8 · 1-8 Scientists formulate hypotheses, 8 · 1-9 Hypotheses are tested through experimentation, 10 · 1-10 Einstein suggests a sample problem, 11 ·

Chapter Summary · Highlights, 13 · Questions, 13 · Bibliography, 13 ·

Some Biological Problems Related to the Variety of Living Things, 14 ·

The Variety of Living Things

21

Classifying Living Things · 2-1 Methods of classification differ, 21 · 2-2 Early attempts at classification, 23 · 2-3 Some organisms are difficult to classify, 25 · Variety and the theory of evolution · 2-4 The theory of evolution helps to explain variety, 26 · 2-5 Fossils supply evidence for evolution, 27 · 2-6 The theory of evolution brings changes in biological classification, 29 · 2-7 Chart of major categories, 31 · 2-8 Scientific inquiry and the variety of life, 31 ·

Chapter Summary · Highlights, 32 · Questions, 32 · Bibliography, 33 ·

A Brief Classification of Organisms, 34 ·

The Means of Evolution: Two Conflicting Views

45

Views on Evolution Before Darwin · 3-1 Early ideas on evolution, 45 · 3-2 Lamarck explains evolution, 45 · Darwin's theory of evolution · 3-3 The voyage of the *Beagle*, 47 · 3-4 The clue from Malthus, 50 · 3-5 Clues from observation and experimentation, 51 · 3-6 Darwin's theory of evolution by natural selection, 52 · 3-7 Darwin announces his hypothesis, 54 · 3-8 Comparing Lamarck's and Darwin's hypotheses, 55 · Adaptation and Selection · 3-9 How adaptations relate to natural selection, 59 · 3-10 Experiments confirming natural selection, 59 · 3-11 Recent examples of natural selection, 60 ·

Chapter Summary · Highlights, 61 · Questions, 62 · Bibliography, 63 ·

The Origin of Living Things 65

4-1 Aristotle proposes a hypothesis on the origin of life, 65 · 4-2 The theory of spontaneous generation becomes widely accepted, 66 · 4-3 Redi's famous experiment raises questions, 68 · 4-4 The microscope supplies new evidence, 70 · 4-5 The work of Needham and Spallanzani, 71 · 4-6 Pasteur performs conclusive experiments, 72 · 4-7 The theory of biogenesis raises new questions, 74 · 4-8 Life from outer space, 75 · 4-9 The autotroph hypothesis, 76 · 4-10 The heterotroph hypothesis, 76 ·

Chapter Summary · Highlights, 78 · Questions, 78 · Bibliography, 79 ·

The Evolution of the Cell

The Forerunners of Life 83

5-1 The ancient earth, 83 · 5-2 The ancient atmosphere, 85 · 5-3 A key to the chemistry of matter: the atomic theory, 87 · 5-4 Chemical composition of water, 88 · 5-5 The electrical nature of matter, 89 · 5-6 Combinations of atoms, 90 · 5-7 Molecules of simple gases, 92 · 5-8 The formation of organic compounds, 94 · 5-9 Molecules of amino acids, 95 · 5-10 Building with amino acids, 96 · 5-11 An experiment with amino acids, 97 · 5-12 Clusters of organic molecules, 99 · 5-13 Interaction of coacervates and other organic materials, 100 · 5-14 The nature of life, 101 ·

Chapter Summary · Highlights, 103 · Questions, 104 · Bibliography, 105 ·

Chemical Energy for Life 107

6-1 Organization and energy, 107 · 6-2 Source of energy for the coacervates, 108 · 6-3 Releasing energy from chemical bonds, 109 · 6-4 Catalysts in living organisms, 111 · 6-5 Raw materials for energy-releasing reactions, 113 · 6-6 Another way to activate reactions, 113 · 6-7 ATP, enzymes, and fermentation, 115 · 6-8 Fermentation as a source of energy, 117 · 6-9 The nature of the cell boundary, 118 · 6-10 Movement of molecules through the cell membrane, 120 · 6-11 The diffusion of water, 120 · 6-12 The process of active transport, 121 ·

Chapter Summary · Highlights, 124 · Questions, 124 · Projects, 125 · Bibliography, 125 ·

Master Molecules 127

7-1 Nucleic acids are found in all life, 127 · 7-2 The parts of a nucleic acid molecule, 128 · 7-3 Nucleic acids can transform bacteria into new types, 132 · 7-4 Viruses and nucleic acids, 135 · 7-5

The activities of a bacterial virus, 135 · 7-6 Nucleic acids control cell activities, 136 · Two Organisms from One · 7-7 A requirement for success — duplication, 138 · 7-8 Volume and surface area during growth, 138 · 7-9 What causes a cell to divide?, 139 · 7-10 Further problems of duplication, 141 · A Molecular Model of DNA · 7-11 Clues to the DNA mystery, 142 · 7-12 A molecular model, 143 · 7-13 The DNA "ladder", 144 · 7-14 The usefulness of the model, 146 · 7-15 The test of the model, 148 ·

Chapter Summary · Highlights, 150 · Questions, 150 · Bibliography, 151 ·

The Biological Code

153

The Language of Life · 8-1 How does a cell pass on its traits?, 153 · 8-2 Code symbols, 154 · 8-3 The code of DNA, 155 · 8-4 Cracking the code, 156 · Building Protein Molecules · 8-5 The DNA and RNA of a cell are closely related, 159 · 8-6 Where are proteins made?, 110 · 8-7 How are proteins made?, 160 · 8-8 Proteins in the life of cells, 162 · New Code Messages · 8-9 The origin of new code messages, 163 · 8-10 A mutation affects the life of a cell, 163 · 8-11 The life of a bread mold, 165 · 8-12 Molds with damaged genes, 165 · 8-13 Genes and enzymes, 169 · New Genetic Patterns · 8-14 Sets of DNA molecules, 171 · 8-15 Genes in new combinations, 172 · 8-16 The transfer of genes, 172 · 8-17 The advantages of sexual reproduction to microorganisms, 174 ·

Chapter Summary · Highlights, 175 · Questions, 175 · Bibliography, 176 ·
Biological Theme, 177 ·

PART THREE The Evolving Organism

Light as Energy for Life

181

Evolution in a Changing World · 9-1 The changing environment, 181 · 9-2 A new form of life — the autotroph, 182 · 9-3 A problem of energy change, 183 · 9-4 The nature of light, 183 · The Nature of Photosynthesis · 9-5 The raw materials and the products, 185 · 9-6 Factors that affect photosynthesis, 186 · 9-7 An energy-changing molecule, 189 · Photosynthesis — a Series of Reactions · 9-8 Carbon in carbon dioxide becomes carbon in carbohydrate, 191 · 9-9 Energy carriers in the reactions of photosynthesis, 194 · 9-10 Oxygen — an important by-product, 194 · The Evolution of Photosynthesis · 9-11 The similarity and variety of photosynthesis, 195 · 9-12 Living material for experimental use, 196 · 9-13 The first autotroph, 197 · The Development of Respiration · 9-14 Oxygen for evolving organisms, 199 · 9-15 Respiration and fermentation compared, 200 · 9-16 The mitochondria and enzymes, 200 · 9-17 The citric acid cycle, 201 ·

Chapter Summary · Highlights, 204 · Questions, 204 · Bibliography, 206 ·
Biological Theme, 207 ·

The Evolved Cell

209

Cells as Operational Units · 10-1 Cells in general, 209 · 10-2 Cells maintain their organization, 210 · 10-3 The cytoplasm contains many structures, 210 · Cell Division · 10-4 The nature of cell division, 212 · 10-5 Division of plant cells,

213 · 10-6 Division of animal cells, 215 · 10-7 The control of cell division, 218 · 10-8 Can cells exist without a nucleus?, 218 · 10-9 Bacteria — more cells without a distinct nucleus, 219 · 10-10 A variety of motion, 221 · 10-11 A variety of structure and function, 223 · 10-12 A biochemical curiosity, 225 · 10-13 Can cells exist without cytoplasm?, 225 ·

Chapter Summary · Highlights, 227 · Questions, 228 · Bibliography, 228 ·

The Cell Theory

231

· 11-1 The microscope leads to new observations, 231 · 11-2 Hooke views the cell, 232 · 11-3 Other biologists observe cells, 233 · 11-4 Knowledge of cells gradually accumulates, 235 · 11-5 The cell theory is proposed, 236 · 11-6 Better tools aid research, 238 · 11-7 Every cell from a cell, 238 · 11-8 The living substance of the cell, 238 · 11-9 New dyes reveal nuclear activity, 239 · 11-10 The functions of whole organisms depend upon cells, 240 · 11-11 The cell theory illustrates the interrelation of facts and ideas, 240 · 11-12 New instruments bring new advances, 241 · 11-13 The cell theory fits into a general scheme, 242 ·

Chapter Summary · Highlights, 243 · Questions, 243 · Project, 244 · Bibliography, 244 · Biological Theme, 245 ·

The Multicellular Organism

247

· 12-1 Aggregates of cells, 247 · 12-2 Division of labor, 248 · 12-3 Life on the old frontiers, 250 · 12-4 Energetic efficiency, 252 · 12-5 Life on land, 252 · 12-6 Structure and function, 253 · 12-7 Reproduction and development, 255 · 12-8 Raw materials and wastes, 255 · 12-9 Distribution of materials, 256 · 12-10 Integration of activities, 256 · 12-11 Multi-purpose systems, 257 ·

Chapter Summary · Highlights, 258 · Questions, 259 · Project, 259 · Bibliography, 259 ·

Multicellular Organisms: New Individuals

Reproduction

263

· 13-1 Sexual reproduction involves the fusion of two nuclei, 263 · 13-2 Gametes and chromosomes, 263 · 13-3 Meiosis — the production of monoploid cells, 265 · 13-4 Fertilization completes the cycle of sexual reproduction, 266 · 13-5 The production of gametes, 266 · 13-6 Sexual reproduction in a protist, 267 · 13-7 The reproductive cycle of the mosses, 268 · 13-8 The success of the flowering plants, 268 · 13-9 The reproductive cycle of the flowering plants, 268 · 13-10 The formation of seed and fruit, 269 · 13-11 Insect pollination — an example of highly specific adaptation, 270 · 13-12 The production of gametes in animals, 271 · 13-13 Patterns of external fertilization, 272 · 13-14 Patterns of internal fertilization, 273 · 13-15 Maintaining the developing organisms, 274 · 13-16 Protection and nourishment by the egg, 274 · 13-17 Protection and nourishment from the mother, 275 ·

13-18 The male reproductive system, 279 · **13-19** The female reproductive system, 279 · **13-20** The female reproductive cycles, 280 · **13-21** Structure and function of the placenta, 281 · **13-22** The birth process, 282 · **13-23** The secretion of milk, 284 · **13-24** The role of hormones produced by the ovaries, 285 · **13-25** The role of the pituitary hormones, 286 · **13-26** Hormonal control by the placenta, 286 · **13-27** Hormone controls of the male reproductive system, 288 ·

Chapter Summary · Highlights, 289 · Questions, 289 · Bibliography, 290 ·

Development

293

The origin of development · **14-1** The meaning of development, 293 · **14-2** Development after asexual reproduction, 294 · **14-3** Development after sexual reproduction, 296 · **14-4** Early ideas about development, 297 · **14-5** The mystery of mammalian development, 298 · **14-6** The beginnings of development, 300 · **14-7** Cleavage in vertebrate embryos, 302 · **14-8** The cavities of early animal embryos, 304 · **14-9** The primary cell layers in animals, 306 · **14-10** The beginnings of plant development, 308 · **14-11** The primary growth tissues in plants, 309 · **14-12** The experimental approach, 311 · **14-13** The experiments of Roux and Driesch, 311 · **14-14** Further light on the problem of differentiation, 313 · **14-15** Embryonic induction in the development of the eye, 315 · **14-16** The culture of tissues, 316 · **14-17** Regeneration in plants, 319 · **14-18** Regeneration in animals, 319 · **14-19** Variations in development, 321 · **14-20** Uncontrolled growth, 322 ·

Chapter Summary · Highlights, 323 · Questions, 324 · Bibliography, 324 ·

Multicellular Organisms: Genetic Continuity

Patterns of Heredity

329

Hereditary material · **15-1** What is genetics?, 329 · **15-2** Selective breeding, 330 · **15-3** The role of environment, 331 · **15-4** Nature and nurture: identical twins, 333 · **15-5** Planning the experiments, 335 · **15-6** Performing the experiments, 337 · **15-7** How a trait is inherited, 339 · **15-8** What is probability?, 340 · **15-9** Two principles of probability, 341 · **15-10** Applying the principles of probability, 342 · **15-11** Using probability in genetics, 343 · **15-12** Interpreting Mendel's results, 344 · **15-13** Dominance, 346 · **15-14** Lack of dominance, 347 · **15-15** The test cross, 348 · **15-16** Multiple alleles, 348 · **15-17** Inheritance of two traits, 349 ·

Chapter Summary · Highlights, 352 · Questions, 353 · Bibliography, 354 ·
Biological Theme, 355 ·

Genes and Chromosomes

357

Linking the experiments to the theory · **16-1** The neglect of Mendel's work, 357 · **16-2** Sutton's theory to explain Mendel's principles, 358 · **16-3** How could Sutton's theory be tested?, 360 · **16-4** The discovery of sex-linked inheritance, 361 · **16-5** Chromosomes are involved in sex determination, 362 · **16-6** An explanation of sex-linked inheritance, 364 · **16-7** Sex-linked inheritance in man, 366 · **16-8** Bridges' unexpected experi-

mental results, 368 · 16-9 Non-disjunction as an explanation, 370 · 16-10 Non-disjunction observed in cells, 371 · 16-11 Linkage: many genes on one chromosome, 373 · 16-12 The mapping of chromosomes, 374 · 16-13 Giant chromosomes, 374 · 16-14 The study of human chromosomes, 375 ·

Chapter Summary · Highlights, 378 · Questions, 379 · Bibliography, 380 · Biological Theme, 381 ·

Origin of New Species

383

· 17-1 New kinds of genes arise by mutation, 383 · 17-2 How often do genes mutate?, 385 · 17-3 What causes genes to mutate?, 385 · 17-4 How radiation was shown to cause mutations, 386 · 17-5 Radiation can have other biological effects, 388 · 17-6 How frequently do certain genes occur in a population?, 390 · 17-7 The genes of a population are pooled for purposes of study, 391 · 17-8 The importance of population genetics, 392 · 17-9 The gene pool of a population changes very slowly, 392 · 17-10 How populations change, 393 · 17-11 How gene pools become isolated, 395 · 17-12 The origin of new varieties, 396 · 17-13 The domestication of plants and animals, 398 · 17-14 New genetic types and agriculture, 399 · 17-15 The origin of species, 401 · 17-16 Is evolution taking place today?, 404 ·

Chapter Summary · Highlights, 406 · Questions, 406 · Bibliography, 407 ·

The Human Species

409

· 18-1 Studying the evolution of man, 409 · 18-2 The search for human fossils, 410 · 18-3 Measuring the age of human fossils, 411 · 18-4 Reconstructing the story of human evolution, 411 · 18-5 What kinds of human traits are under genetic control?, 415 · 18-6 Genes affecting man's appearance, 415 · 18-7 Genes affecting man's intelligence, 416 · 18-8 Genes affecting man's health, 417 · 18-9 Defining a population, 418 · 18-10 Sampling a population, 419 · 18-11 Determining the frequency of a gene in a population, 420 · 18-12 Finding the frequency of a gene, 421 · 18-13 The Hardy-Weinberg principle, 422 · 18-14 Applying the Hardy-Weinberg principle, 424 · 18-15 The varieties of mankind, 425 · 18-16 Frequencies of blood group genes in human populations, 427 · 18-17 The "races" of man, 428 · 18-18 The future of the human species, 429 ·

Chapter Summary · Highlights, 432 · Questions, 432 · Bibliography, 433 ·

Multicellular Organisms: Energy Utilization

Photosynthetic Systems

437

· 19-1 The evolutionary pathway, 437 · 19-2 The final product of photosynthetic evolution—the multicellular green plant, 438 · 19-3 Problems of the multicellular green plant, 438 · 19-4 The entry of carbon dioxide into multicellular plants, 439 · 19-5 The pathway of oxygen in multicellular

plants, 442 · 19-6 Photosynthesis occurs in the chloroplasts, 443 · 19-7 Chlorophyll absorbs light energy, 445 · 19-8 The entry and transport of materials in the multicellular plant, 446 · Factors Which Affect the Rate of Photosynthesis in Multicellular Plants · 19-9 Photosynthesis and the growth rate of the multicellular plant, 448 · 19-10 Carbon dioxide concentration, 448 · 19-11 The effect of light intensity on photosynthesis, 449 · 19-12 The effect of temperature on photosynthesis, 450 · 19-13 Mineral nutrition and its effect on photosynthesis, 450 · 19-14 The effect of water concentration on photosynthesis, 451 ·

Chapter Summary · Highlights, 452 · Questions, 452 · Bibliography, 454 · Biological Theme, 455 ·

Transport Systems

457

Transport in Plants · 20-1 The transport system is the product of evolution, 457 · 20-2 Two kinds of conducting tissue: xylem and phloem, 458 · 20-3 The mechanism of water transport in plants is a complicated engineering problem, 459 · 20-4 The cohesion-tension theory, 461 · 20-5 The phloem: conductor of organic materials, 461 · Transport Systems of Animals · 20-6 Transport: A problem of complex organisms, 463 · 20-7 Two major types of transport systems, 463 · 20-8 The transport fluid is a complex substance, 465 · 20-9 Early investigations of blood flow in transport systems, 466 · Circulation and Acquisition of the Transport System · 20-10 The heart and its control, 469 · 20-11 How the nerves affect changes in heart rate, 470 · 20-12 Blood pressure and blood flow, 471 · Homeostasis and the Internal Environment · 20-13 The meaning of homeostasis, 474 · 20-14 Tissue fluid: the internal environment, 474 · 20-15 The mechanism of fluid exchange through the capillaries, 475 · 20-16 The lymphatic system, 477 ·

Chapter Summary · Highlights, 478 · Questions, 478 · Bibliography, 479 ·

Respiratory Systems

481

The Discovery of Respiration · 21-1 Our knowledge of respiration, 481 · Form and Function of Respiratory Surfaces · 21-2 The respiratory surfaces of plants and small animals, 483 · 21-3 The form and function of gills, 484 · 21-4 The form and function of tracheae, 484 · 21-5 The form and function of lungs, 485 · 21-6 The mechanics of lung breathing — the human as an example, 486 · Adaptations for the Transport of the Gaseous Osmotic Solvent · 21-7 The transport of oxygen in complex animals, 487 · 21-8 The important properties of the transport pigments, 488 · 21-9 The role of blood in carbon dioxide transport, 489 ·

Chapter Summary · Highlights, 490 · Questions, 490 · Bibliography, 491 ·

Digestive Systems

493

Patterns of Digestion · 22-1 The significance of digestion, 493 · 22-2 Intracellular and extracellular digestion, 494 · 22-3 Digestion in plants, 495 · 22-4 Digestion in animals, 496 · The Human Digestive System · 22-5 The human digestive tract, 497 · 22-6 Digestion starts in the mouth and esophagus, 498 · 22-7 Alexis St. Martin's stomach, 499 · 22-8 Digestion continues in the stomach, 501 · 22-9 The small intestine, the pancreas, and the liver, 502 · 22-10 Final breakdown and absorption in the small intestine, 504 · 22-11 The role of the large intestine, 504 ·

Chapter Summary · Highlights, 506 · Questions, 506 · Bibliography, 507 ·

Excretory Systems

509

23-1 The evolution of excretory processes, 509 · 23-2 What is excretion?, 510 · 23-3 Excretion in plants, 510 · 23-4 Excretion in animals, 511 · 23-5 The excretory system of man, 513 · 23-6 The kidney's blood supply, 515 · 23-7 The kidney as a filter, 515 · 23-8 Reabsorption and active excretion, 516 · 23-9 Urea formation, 517 · 23-10 Regulation of the internal environment by the kidney, 518 · 23-11 Adaptations of vertebrate excretory processes, 518 ·

Chapter Summary · Highlights, 519 · Questions, 520 · Project, 520 · Bibliography, 520 ·

Multicellular Organisms: Integrative Systems**Regulatory Systems**

525

24-1 The discovery of a regulating mechanism in plants, 525 · 24-2 Other biologists' work with coleoptiles, 528 · 24-3 Auxins: plant hormones, 531 · 24-4 Regulation is the basis of homeostasis, 531 · 24-5 Many coordinators act to regulate one compound, 532 · 24-6 The thyroid and its general function, 534 · 24-7 The discovery of thyroid function, 535 · 24-8 The regulation of the thyroid gland, 537 · 24-9 Thyroid disorders: disturbance of homeostasis, 538 ·

Chapter Summary · Highlights, 539 · Questions, 540 · Project, 540 · Bibliography, 540 ·

Nervous Systems

543

25-1 Nerve structures in different organisms, 543 · 25-2 The characteristic nerve cell, 544 · 25-3 The nerve impulse, 546 · 25-4 Transmission across synapses, 548 · 25-5 Stimuli, receptors and sensory neurons, 550 · 25-6 The brain, spinal cord, and effector neurons, 551 · 25-7 Regulation by nerves, 552 · 25-8 Reflex activity of the spinal cord, 552 · 25-9 Brain reflex activity, 554 ·

Chapter Summary · Highlights, 556 · Questions, 556 · Bibliography, 556 ·

Skeletal and Muscular Systems

559

26-1 Skeletal systems provide support and protection, 559 · 26-2 Bone is the building material of skeletons, 560 · 26-3 Control of bone formation, 561 · 26-4 Muscle function, 562 · 26-5 Muscle tissues, 562 · 26-6 Muscle types in different organisms, 566 · 26-7 Organization of muscles, 566 · 26-8 Muscle action in different animals, 567 · 26-9 What stimulates striated muscle to contract?, 567 · 26-10 The mechanics of contraction, 568 · 26-11 Energy for muscle contraction, 569 · 26-12 Glycolysis, 570 · 26-13 ATP and creatine phosphate, 570 ·

Chapter Summary · Highlights, 571 · Questions, 572 · Project, 572 · Bibliography, 572 · Biological Theme, 573 ·

The Integrated Organism and Behavior 575

The Change of Identity · 27-1 Behavior—the total activities of an organism, 575 · 27-2 A single-celled organism shows behavior, 576 · 27-3 Plants behave in a stereotyped manner, 577 · 27-4 Different types of behavior, 581 · 27-5 Innate behavior in the vertebrates, 581 · 27-6 Learning through the conditioned response, 585 · 27-7 Imprinting and experiments with mazes, 586 · 27-8 Reasoning is characteristic of man and some primates, 587 · 27-9 Behavior as an aspect of adaptation, 589 ·

Chapter Summary · Highlights, 591 · Questions, 592 · Bibliography, 593 ·

Higher Levels of Organization

Populations 597

The Population of Organisms · 28-1 Groups of similar individuals, 597 · 28-2 Population controls suggested by Plato, 598 · 28-3 Malthus, population, and food, 599 · 28-4 Curves, variables, and proportions, 602 · 28-5 Verhulst and population growth, 604 · 28-6 Populations of mice, 606 · 28-7 Paramecia in competition, 608 · 28-8 Lynx, sunspots, and snowshoe hares, 610 ·

Chapter Summary · Highlights, 613 · Questions, 613 · Bibliography, 614 ·
Biological Theme, 615 ·

Societies 617

The Structure of Societies · 29-1 Groups of animals, 617 · 29-2 Group structure based on sexual differences, 620 · 29-3 Group structure based on body adaptations of individuals, 621 · 29-4 Group structure based on behavioral adaptations of individuals, 622 · 29-5 Problems of a society, 622 · 29-6 Order in a society, 623 · 29-7 Leadership, 627 · 29-8 Territoriality, 629 · 29-9 Communication among bees, 631 ·

Chapter Summary · Highlights, 636 · Questions, 636 · Bibliography, 637 ·
Biological Theme, 639 ·

Communities 641

The Structure of a Community · 30-1 A collection of species living together, 641 · 30-2 The dominant species of communities, 644 · 30-3 The layers of a community, 644 · 30-4 The boundaries of communities, 647 · 30-5 Size and number, 648 · The structure of a community · 30-6 Food chains and food webs, 650 · 30-7 The transfer of energy and matter in a community, 651 · 30-8 Community integration, 653 · 30-9 Changing communities—succession, 655 · 30-10 The climax community, 658 · 30-11 Community succession, 663 ·

Chapter Summary · Highlights, 667 · Questions, 667 · Bibliography, 668 ·
In conclusion, 669 ·

Appendix
