

CONTENTS

1	<i>Introduction</i>	3
1.	The Living World and Its Study	4
	“Know Thyself”	4
	A Forest	4
	The Scene and the Actors	4
	Some Themes of the Drama	5
	A Coral Island	7
	Another Scene, Another Cast	7
	Themes Old and New	10
	Organizing the Inquiry	12
	Pursuing the Inquiry	13
	The Nature of Science	13
	Biology and the Scientific Conceptual Scheme	16
	Origins of Science	16
	Early, Incompletely Scientific Biology	17
	Biology Fully Enters the Scheme	17
	CHAPTER SUMMARY	18
2	<i>The Basis of Life</i>	21
2.	Molecular Aspects of Biology	22
	Chemical Substances	23
	Atoms	23
	Chemical Bonds	26
	Major Elements of the Living Organism	28
	Carbon	28
	Hydrogen and Oxygen	29
	Nitrogen	30
	Minerals	31
	Properties of Compounds	31
	Unusual Properties of Water	32
	Ionic Dissociation	34
	Properties of Organic Compounds	36
	Organic Compounds in Living Organisms	39
	Simple and Complex Carbohydrates	41
	Lipids	44
	Amino Acids and Proteins	45
	Nucleotides and Nucleic Acids	49
	Properties of Chemical Reactions	51
	Energy and Work in General	52
	Factors Governing Reaction Velocity	53
	The Energy of Chemical Reaction	54
	Oxidation-Reduction: Energy Exchange	57
	Chemical Equilibrium	58
	Enzymes	58
	Mechanisms of Enzyme Action	59
	Enzyme Inhibitors	60
	Coenzymes	61
	CHAPTER SUMMARY	63
3.	The Cell: Unit of Life	64
	The Cell Theory	64
	Development of the Cell Theory	64
	The Cell: The Minimum Material Organization Possessing Life	68
	Organization of the Cell	69
	Sizes and Shapes of Cells	69
	Protoplasm: A Useful if Misleading Word	71

The Generalized Cell	71	Heredity as Information for the Control of Development	146
The Cell Membrane and Wall	71	Cellular Basis of Reproduction	147
The Nucleus	74	Virchow's Doctrine: "All Cells from Cells"	147
The Cytoplasm	75	The Nucleus as Control Center	147
Physical Organization of Protoplasm	80	Mitosis	149
The Cell as an Organism	87	Diploidy: Its Origin in Fertilization	155
The Multicellular Organism	89	Haploidy: Its Origin in Meiosis	156
Protistan Colonies and Cellular Differentiation	89	Significance of Mitosis and Meiosis	160
Cellular Differentiation: Cells, Tissues, Organs, and Systems	90	CHAPTER SUMMARY	161
Plant Cells and Tissues	91	6. The Chromosome Theory of Heredity	162
Animal Cells and Tissues	98	Pre-Mendelian Ideas on Heredity	163
CHAPTER SUMMARY	104	Blending of Inheritance	163
4. The Cell: Its Metabolic Machinery	105	Inheritance of Acquired Characteristics	164
Adaptation and Homeostasis	105	Pangenesis	165
Cell Metabolism: Some Basic Principles	106	Weismann's One-Way Relationship Between Germ Cells and Soma	165
Anabolism and Catabolism	106	Mendel's Principles of Heredity	166
Universality of Fundamental Metabolic Processes	106	Mendel's First Experimental Results:	
Cellular Environment and Nutrition	107	A Single Character Difference	166
How Cells Get Their Materials	110	Mendel's Hypothesis of Paired Factors:	
Relations of Cell Structure and Cell Metabolism	111	Segregation and Dominance	168
Chemical Work of the Cell	112	Mendel's Tests of the Hypothesis	170
Energy Capture: Photosynthesis	113	Two Character Differences: Independent Segregation	171
Energy Release and Expenditure	117	Physical Basis of Heredity	173
Energy Utilization: Synthesis of Cell Components	128	The Chromosome Theory	173
Control of Cell Metabolism	133	Tests of the Chromosome Theory	175
Factors Affecting the Level of Enzyme Activity	134	Linkage and Crossing Over	185
Regulation of the Rate of Enzyme Formation	136	Quantitative Inheritance	189
CHAPTER SUMMARY	137	The Theory of Multiple Factors	189
		CHAPTER SUMMARY	193
		7. Genes and Their Actions	194
3	Reproduction: The Continuity of Life	The Inherited Message in Living Systems	194
		Nature of the Genetic Material	195
		Small Size of the Inherited Message	195
		Genes: Size and Number	195
		What Is a Gene?	196
		Chemistry of the Genetic Material	197
		Genetic Significance of DNA	197
5. Reproduction: Cellular Aspects	141	Reproduction of the Genetic Material	201
Major Features of Organic Reproduction	141	Mechanism of Gene Action	204
Human Reproduction: Problems and Principles	141	The One Gene-One Enzyme Theory	204
Biogenesis: Argument from Experiment	144	How DNA Controls Protein Synthesis	206
Biogenesis: Argument from Theory	144	Mutations	211
		Dominance and Multiple Alleles	215
		Action of the Genotype as a Whole	217

Again, What Is a Gene?	220
Cytoplasmic Inheritance	221
CHAPTER SUMMARY	223
8. Development	224
Processes of Development	224
Growth and Cell Division	224
Morphogenesis: The Creation of Pattern and Shape	225
Differentiation: Cell Specialization	225
Patterns of Morphogenesis and Differentiation in Animals	225
Maturation of the Egg Cell	225
Fertilization	227
Cleavage	227
Castrulation: A Principal Morphogenetic Phase	229
Differentiation and Organ Formation	232
Induction and Organizers	232
The Problem of Genetic Control	234
Patterns of Growth	236
The Growth Curve	236
Percentage Growth	238
Relative Growth	239
Evolution of Development	240
Supposed Recapitulation	240
Changes in Ontogeny	241
Relative Growth and Evolution	242
CHAPTER SUMMARY	243
9. Reproduction: Organismic Aspects	244
The Generalized Reproductive Cycle	245
Asexual and Sexual Reproduction	245
Distribution and Significance of Sex in Organisms	246
The Haplophase-Diplophase Reproductive Cycle	248
Reproductive Cycles in Plants	250
Gametophyte and Sporocyte	250
Plantlike Protists	250
Algae	251
Mosses	253
Ferns	254
Seed Plants	255
The Problem of Plant Immobility	258
Reproductive Cycles in Animals	264
Dominance of the Diplophase	264
Sexual plus Vegetative Reproduction	265
Fertilization	266
Larvae	270
Evolution of Vertebrate Reproduction	272
Regression of Sexuality	276
CHAPTER SUMMARY	278

4 The Maintenance and Integration of the Organism	281
10. Organic Maintenance: I	283
Procurement Processes	283
Intake	283
Digestion	287
Assimilation	292
Nutrition	292
Respiration	294
The Meaning of Respiration	294
Cellular Respiration	294
Respiratory Rates	297
Respiratory Systems	299
CHAPTER SUMMARY	300
11. Organic Maintenance: II	303
Transportation and Circulation	303
Transportation in Protists and Plants	303
Transportation in Animals	305
Secretion and Excretion	317
Secretion	319
Excretion in Plants and Lower Animals	320
Water Problems	321
Excretion in Higher Animals	322
CHAPTER SUMMARY	325
12. Organization and Integration	326
Organization	326
Internal Environment	327
Regulation of the Internal Environment	330
Chemical Coordination	339
Hormones of the Human Body	340
Hormones of Other Animals	347
Hormones of Plants	350
CHAPTER SUMMARY	352
13. Responsiveness	353
Reactivity of Protoplasm	353
Stimulus and Response	354
Kinds of Stimuli	354
Effectiveness of Stimuli	355
Responses	356
Nerves and Nerve Action	357
Nerve Cells	357
Nerve Impulses	358
Nerve Connections	359
Nerve Patterns and Responses	361

Receptors	361	Genetics of Populations	423
Light Receptors	362	Variations Within Biparental	
Touch, Pressure, and Sound Receptors	367	Populations	425
The Sense of Equilibrium	369	Evolution as a Change in Genetic Pools	425
Chemical Receptors	369	Genetic Equilibrium	426
Other Receptors	372	Evolution as a Deviation from Genetic	
History of the Nervous System	374	Equilibrium	429
Origin	375	Natural Selection	431
Trends in Higher Vertebrates	375	Nonrandom Reproduction	431
Structure of the Vertebrate Brain	377	Nature of Natural Selection	437
Function of the Brain in Mammals	381	CHAPTER SUMMARY	441
The Nervous System and the Internal			
Environment	383		
CHAPTER SUMMARY	385	16. The Evolution	
		of Adaptation	442
14. Behavior	387		
		Evolution and the Problem of Purpose	442
What Is Behavior?	387	Nature of Adaptations	443
Effectors	388	A Definition	443
Movements	388	Diversity of Adaptations	445
Effectors in Plants	388	Broad and Narrow Adaptations	448
Effectors in Protists	389	Individual Adaptability	449
Muscular Effectors	390	Inheritance of Acquired Characters	450
Other Effectors	392	Lamarckism or Neo-Lamarckism	450
Study of Behavior	394	Failure of the Hypothesis	451
Tropisms and Similar Movements	396	Natural Selection and Adaptive	
Tropisms	396	Coloration	452
Nontropistic Movements	398	Cryptic Coloration	452
Adaptive Nature of Behavior	400	Warning Coloration	455
Behavior and Nervous Systems	401	Other Kinds of Adaptive Coloration	455
Nerve-Net Behavior	401	Natural Selection as a Historical Process	456
Behavior with the Beginnings of Brains	402	Occupation of New Environments	456
Innate and Learned Behavior	403	Major Adaptive Radiations	459
Instinct and Learning	403	The Evolutionary Lottery	461
Imprinting, Releasers, and Action Patterns	404	Historical Opportunism Versus Design	463
Reflexes	405	Natural Selection and the Inherited	
Conditioned Reflexes	407	Information	466
Conditioned Responses, Habits, and Learning	409	CHAPTER SUMMARY	466
Motivation	410		
Other Influences on Learning	412	17. Variation, Species, and	
Behavior in Insects	412	Speciation	468
Concepts and Symbols	414		
Other Aspects of Behavior	416	Species: Unit of Population Diversity	468
CHAPTER SUMMARY	417	Intraspecific Variation	468
		Sources of Variation	469
5		Bell-Shaped Distribution of Variation in	
<i>The Mechanism</i>		Demes	469
<i>of Evolution</i>	419	Polymorphism	471
		Differences Between Demes	474
15. Elementary Processes of		Species and Speciation	479
Evolution	421	The Species Problem	479
		Speciation	480
Individuals, Populations, and Species	421	Isolating Mechanisms	481
The Forest and the Trees	421	Interspecific Selection	483
Units of Life	421	CHAPTER SUMMARY	484

6 *The Diversity of Life* 487

18. Principles of Classification 488

Resemblance and Difference 488

Nature of Systematic Units 491

Interpretation of Form and Descent 493

Homology 494

Homoplasy and Analogy 495

Transformation 497

Irreversibility of Evolution 498

Convergence and Parallelism 499

Divergence 501

The Practice of Classification 502

The Systematic Hierarchy 502

Nomenclature 504

CHAPTER SUMMARY 505

19. Protists and Simple Plants 507

General Characteristics 509

Bacteria 510

General Characteristics 510

Adaptations 511

Useful and Harmful Bacteria 511

Blue-Green Algae 513

Flagellates 514

Animal-like Protists 515

Amoeba and Its Kin 516

Sporozoa 519

Ciliates 520

Slime Molds 521

Algae, the Grass of the Waters 522

Fungi 524

Lichens 527

CHAPTER SUMMARY 528

20. More Complex Plants 529

Conditions of Land Life 529

Bryophytes 530

Early Vascular Plants 531

Psilopsids 531

Lycopods (Club Mosses) 532

Sphenopsids (Horsetails) 533

Ferns 533

Early Seed Plants 535

Seed Ferns 537

Ginkgos 537

Cycadeoids and Cycads 540

Cordaites 541

Conifers 541

Flowering Seed Plants 543
CHAPTER SUMMARY 546

21. Major Groups of Animals 547

What Is an Animal? 547

Major Animal Phyla 548

Porifera (Sponges) 549

Coelenterata 550

Platyhelminthes 553

Nematoda 555

Bryozoa 555

Brachiopoda 555

Mollusca 557

Annelida 557

Arthropoda 559

Echinodermata 559

Chordata 563

Adaptive Radiations Versus the Ladder
of Life 565

Basic Characteristics of the Animal Phyla 569

Tissue Layers 569

Digestive System 569

Coelom 571

Skeletal System 571

Circulatory System 571

Segmentation 572

Symmetry 572

Larvac 573

Origins and Relationships of the Animal
Phyla 573

Origins of Multicellular Animals 574

The Annelid Superphylum 576

The Echinoderm Superphylum and the

Origin of Vertebrates 577

CHAPTER SUMMARY 581

22. Mollusks, Anthropods, and Vertebrates 582

Mollusks 583

Gastropods 584

Pelecypods 585

Cephalopods 589

Arthropods 590

Crustaceans 591

Arachnids 592

Insects 594

Vertebrates 597

Agnathis 602

Placoderms 604

Chondrichthyans 604

Osteichthyans 606

Amphibians 608

Reptiles 610

Birds	612	Limiting and Balancing Factors	668
Mammals	615	Materials and Energy	668
CHAPTER SUMMARY	622	Food Chains	668
		Competition	670
		Population Periodicity	671
		Intraspecific Interactions	673
		Competition	673
		Aggregation and Cooperation	676
		Division of Roles and the Rise of Societies	676
		Societies	678
		Insect Societies	678
		Human Societies	681
		CHAPTER SUMMARY	682
			682
7	The Life of Populations and Communities		
	625		
23. Environments, Populations, and Communities	627	26. The Human Species and Communities	683
Environment	628	Man and Nature; Man in Nature	683
The Physical Environment	628	Systematics of <i>Homo sapiens</i>	684
The Biotic Environment	633	Origin and Nature of Races	685
Population and Environment	633	Racial Characters	687
Range, Limits, and Optimum	634	Unity and Diversity	688
Tolerance and Preferences	634	Basic Ecology of <i>Homo sapiens</i>	688
Adaptation and Adaptability	635	Primitive Man and Environments	689
Community and Environment	635	Cultural Modification of Human Ecology	690
Cycles of Materials	636	Modification of Environment	691
Transfers of Energy	639	Land Use	692
CHAPTER SUMMARY	641	Disturbance of Communities	693
		Depletion and Conservation	694
24. Organization and Change in Communities	642	Utilization Versus Preservation	694
		Man and Soil	696
The Web of Life	642	Floods and Flood Control	697
Chains and Pyramids	642	Renewing Renewable Resources	698
Food Chains	642	CHAPTER SUMMARY	700
Pyramids of Energy and Mass	643		
The Pyramid of Numbers	644		
Budgets: The Limitation of Life	644		
Niches and Competition	646		
Relationships Among Niches	647		
Nature of Competition	648		
Competition and Evolution	648		
Interspecific Interactions: Symbiosis	649		
Commensalism	651		
Mutualism	651		
Parasitism	652		
Change in Communities	659		
Succession	659		
Examples of Community Succession	659		
Convergence and Climax	661		
Climax and Change	662		
CHAPTER SUMMARY	663		
25. Organization and Change in Population	664	8	The Geography of Life 703
Rise and Fall of Populations	664	27. Ecological Biogeography	705
Birth, Death, and Survival	664		
Malthus and the Growth of Populations	666	Bases of Biogeography	705
		Some Principles of Ecological Biogeography	706
		Importance of Plants in Biogeography	706
		Horizontal and Vertical Controls	707
		Terrestrial Communities	709
		Tundra and Alpine Communities	712
		Taiga	713
		Temperate Deciduous Forests	714
		Rain Forests	715
		Grasslands	718
		Deserts	719

Fresh-Water Communities	720
Marine Environments and Communities	721
Marine Environments	722
Over-All Ecology of the Ocean	723
CHAPTER SUMMARY	724
28. Historical Biogeography	726
Biogeographic Regions	727
Faunal Regions on Land	727
Some Problems	728
Faunal Change and Earth Change	732
Dispersal and Isolation	733
Means of Dispersal	733
Routes of Dispersal	734
Barriers	735
Changing Biotas and Geography	737
The World Continent	737
Island Continents	738
Faunal Interchange	739
Faunal Stratification	741
Disjunction	741
CHAPTER SUMMARY	744

9 *The History of Life* 747

29. Background, Beginnings, and Trends	749
“Being” Versus “Becoming”	749
Time and the Earth	750
In the Beginning	750
The Geological Time Scale	750
Origin of Life	752
Problems	752
A Hypothesis on the Forerunners of Life	754
Early Organisms	755
Fossils and the Historical Record	756
Principles	756
Uniformitarianism	757
What Fossils Are	757
Pre-Cambrian Fossils	760
Over-All Record	761
Some Major Tendencies	761
Expansion	761
Occupation of Environments	764
Change: Persistence and Replacement	764
Complication and Improvement	765
CHAPTER SUMMARY	766

30. Ancient Seas and Conquest of the Land	769
Cambrian and Ordovician Seas	770
Appearance of the Animal Phyla	770
Life of the Late Ordovician	770
The Age of Fishes	774
Occupation of the Land	777
Difficulties	777
Earliest Land Plants and Animals	778
The Permo-Carboniferous	778
Coal Forests	778
Land Invertebrates	779
Amphibians	780
Reptiles	780
The Age of Reptiles	781
Permo-Triassic Crisis	781
Dinosaurs	783
Some Other Mesozoic Reptiles	785
Into the Air	785
Mammals	789
The Great Dying	789
CHAPTER SUMMARY	790
31. Modernization of the Living World	792
Modernization in Aquatic Environments	793
Aquatic Plants	793
Invertebrates	793
Fishes	793
Other Aquatic and Amphibious Vertebrates	793
Modernization in Land Environments	794
Plants	794
Insects	794
Reptiles	795
Birds	795
History of the Mammals	796
Mesozoic Mammals	796
Beginning of the Age of Mammals	797
Modernization of Mammals	799
Eocene and Oligocene Mammals	799
The Horse Family	803
Forerunners of Man	805
Early Prosimians	806
Monkeys	807
Apes	807
Australopithecines	809
Man's Place in Nature	811
Human Origins	811
Fossil Men	813
Neandertal Men	813
Early <i>Homo sapiens</i>	813
Early Man in America	814
And What of the Future?	814
CHAPTER SUMMARY	814

10 *The History of Biology*

	819			
32. The Long Search	821			
Natural History	822			
Classification and Systematics	822			
Life Sciences and the Scope of Biology	823			
The Organism in Its Environment	824			
Biogeography	824			
Ecology	825			
The Organism in the Laboratory	826			
Human and Comparative Anatomy	826			
Physiology	827			
Within the Organism	829			
Science and Technique	829			
Microorganisms	829
