## PART ONE NEURAL ORGANIZATION FOR PERCEPTION 1

### ONE ANALYSIS OF SIGNALS IN THE CENTRAL NERVOUS SYSTEM 3

Information in individual neurons • Connections and meaning of signals • Organization for perception • BACKGROUND INFORMATION 8 • Neuronal shapes and cerebellar connections • Recording techniques

### TWO THE VISUAL WORLD: CELLULAR ORGANIZATION AND ITS ANALYSIS 16

RETINA AND LATERAL GENICULATE NUCLEUS 17 • Anatomical pathways • Receptive fields: size and overlap • Synthesis of receptive fields • What do ganglion cells tell us? • THE VISUAL CORTEX 34 • Structure • Receptive fields of simple, complex, hypercomplex cells • Binocular convergence on neurons • Connections combining right and left visual fields • Corpus callosum • Cortical receptive fields: organization and perception of form • Hierarchical synthesis of receptive fields

### THREE COLUMNAR ORGANIZATION OF THE CORTEX 61

Methods for tracing interconnections • Organization in columns: orientation and ocular dominance • Shapes and distribution of columns

## PART TWO MECHANISMS FOR NEURONAL SIGNALING 75

### FOUR ELECTRICAL SIGNALING 77

Current flow in neurons • Types of signals • Measurement of membrane potential • Nerve impulses • SIGNALS USED IN A SIMPLE REFLEX 83 • Synthesis of signals, integration

### FIVE IONIC BASIS OF RESTING AND ACTION POTENTIALS 88

The resting potential • Origin of electrochemical potentials • Sodium ions and the action potential • Changes in ion concentration through activity • Membrane permeability and membrane potential • Ionic currents and conductances

### SIX CONTROL OF MEMBRANE PERMEABILITY 106

Voltage clamp • Ionic currents as a function of membrane potential • Sodium and potassium currents • Selective poisons for ionic channels • Calcium and excitability • Sodium and potassium permeabilities and reconstruction of the nerve impulse • Channels for ionic movement • Gating currents

<b>NEURONS AS CONDUCTORS OF ELECTRICITY</b>	<b>SEVEN 132</b>	Electrical properties of nerve and muscle membranes • Capacitance and time constant • Local currents and impulse conduction • Myelin and saltatory conduction
<b>SYNAPTIC TRANSMISSION</b>	<b>EIGHT 145</b>	Concept of chemical transmission • Nerve-muscle junctions • ELECTRICAL SYNAPTIC TRANSMISSION 154 • Structural basis • Significance • Electrical coupling in non-neural tissues • CHEMICAL SYNAPTIC TRANSMISSION 161 • Action of acetylcholine • Ionic permeabilities and reversal potential • Simultaneous sodium and potassium permeability increase • SYNAPTIC INHIBITION 168 • PRESYNAPTIC INHIBITION 171 • Electrical inhibition • Unusual mechanisms of transmission
<b>RELEASE OF CHEMICAL TRANSMITTERS</b>	<b>NINE 177</b>	Synaptic delay • Calcium entry and transmitter release • Quantal release of transmitter • Miniature synaptic potentials • Significance
<b>MICROPHYSIOLOGY OF CHEMICAL TRANSMISSION</b>	<b>TEN 192</b>	Fine structure • Sites of transmitter release • Vesicles and release • CHEMORECEPTORS AND THEIR DISTRIBUTION 200 • Chemical specialization of synaptic membranes • COMPONENTS OF THE SYNAPTIC RESPONSE 205 • Elementary and quantal responses • Postsynaptic potentiation • Number of molecules in a quantum
<b>THE SEARCH FOR CHEMICAL TRANSMITTERS</b>	<b>ELEVEN 219</b>	Cellular approach • Criteria for identification • GABA: AN INHIBITORY TRANSMITTER 223 • Similar actions of applied and nerve-released GABA • GABA in the vertebrate brain • Metabolic basis of GABA accumulation • Action of glycine • Other transmitters • Axoplasmic transport
<b>ACTIVE TRANSPORT OF IONS</b>	<b>TWELVE 237</b>	IONIC CONCENTRATION CHANGES RESULTING FROM NERVE IMPULSES 238 • Active transport: sodium, potassium, and the sources of energy • Ionic pumps and potential changes: significance for signaling • CALCIUM EXTRUSION FROM SQUID AXONS AT THE EXPENSE OF SODIUM ENTRY 247
<b>PART THREE</b>		<b>THE SPECIAL ENVIRONMENT OF NERVE CELLS IN THE BRAIN FOR SIGNALING 253</b>
<b>PHYSIOLOGY OF NEUROGLIAL CELLS</b>	<b>THIRTEEN 255</b>	Classification of neuroglia • HYPOTHESES FOR FUNCTIONAL ROLES OF NEUROGLIAL CELLS 264 • PHYSIOLOGICAL PROPERTIES OF NEUROGLIAL CELL MEMBRANES 268 • Glia in simple nervous systems • Dependence of membrane potential on potassium • Absence of active responses and special interconnections • Physiological identification of glial cells in the mammalian brain • A SIGNALING SYSTEM FROM NEURONS TO GLIAL CELLS 274 • Potassium-mediated signals • GLIAL CELLS AS A SOURCE OF POTENTIALS RECORDED WITH SURFACE ELECTRODES 282 • Electroencephalogram and electroretinogram • MEANING OF SIGNALING FROM NEURON TO GLIA 285 • Consequences of potassium accumulation
<b>REGULATION OF THE COMPOSITION OF THE FLUID SPACES IN THE BRAIN</b>	<b>FOURTEEN 289</b>	Distribution of cerebrospinal fluid and blood • INTERCELLULAR CLEFTS AS CHANNELS FOR DIFFUSION IN THE BRAIN 292 • IONIC ENVIRONMENT OF NEURONS IN THE BRAIN 298 • Homeostatic regulation • Potassium concentration in intercellular clefts • Sites of regulation • Endothelial cells • Choroid plexus

**PART FOUR    SENSORY RECEPTORS    305**

**HOW SENSORY SIGNALS ARISE  
AND THEIR CENTRIFUGAL  
CONTROL    307**

**FIFTEEN**

Sensory endings as transducers • MECHANOELECTRICAL TRANSDUCTION IN STRETCH RECEPTORS 310 • Generator potential • Muscle spindles • Sensory adaptation • CENTRIFUGAL CONTROL OF SENSORY RECEPTORS 315 • Excitatory and inhibitory control • Control of movement • OTHER RECEPTORS AND CONTROL OF ASCENDING PATHWAYS 329

**PART FIVE    HOW NERVE CELLS TRANSFORM INFORMATION    333**

**TRANSFORMATION OF  
INFORMATION BY SYNAPTIC  
ACTION IN INDIVIDUAL  
NEURONS    335**

**SIXTEEN**

CRUSTACEAN MYONEURAL SYNAPSES 336 • SYNAPTIC INTERACTIONS AT THE MAUTHNER CELL 340 • Structure and function • Excitatory electrical and chemical synapses • Chemical inhibition • Electrical inhibition • Pre-synaptic inhibition • INTEGRATION BY THE SPINAL MOTONEURON 347 • COMPARISON OF INTEGRATION IN THE THREE CELL TYPES 351

**SEVENTEEN  
A SIMPLE  
NERVOUS SYSTEM:  
THE LEECH    354**

Why invertebrates? • ANALYSIS OF REFLEXES MEDIATED BY INDIVIDUAL NEURONS 358 • Sensory and motor neurons in ganglia • Performance of various synapses • Activity modifies signaling • Levels of integration

**PART SIX    NATURE AND NURTURE    373**

**NEURAL SPECIFICITY:  
DENERVATION AND FORMATION  
OF NEURONAL  
CONNECTIONS    377**

**EIGHTEEN**

DENERVATION AND FORMATION OF CONNECTIONS 378 • The denervated muscle membrane • Acetylcholine receptors: formation, synthesis, turnover • Denervated neurons • SUPERSENSITIVITY AND REINNERVATION OF MUSCLES 385 • Foreign nerves and multiple innervation • NERVE GROWTH FACTOR: WHAT INDUCES GROWTH? 390 • REINNERVATION IN THE CENTRAL NERVOUS SYSTEM 392 • Accuracy of reinnervation • Sprouting • ABNORMAL CONNECTIONS IN THE MAMMALIAN CENTRAL NERVOUS SYSTEM: THE SIAMESE CAT 395 • GENERAL CONSIDERATIONS OF NEURAL SPECIFICITY 398

**GENETIC AND ENVIRONMENTAL  
INFLUENCES IN THE  
MAMMALIAN VISUAL  
SYSTEM    402**

**NINETEEN**

THE VISUAL SYSTEM IN NEWBORN KITTENS AND MONKEYS 404 • EFFECTS OF ABNORMAL EXPERIENCE 406 • Lid closure • Susceptible period and recovery • Morphological changes • Whiskers in the mouse • REQUIREMENTS FOR MAINTENANCE OF FUNCTIONING CONNECTIONS IN THE VISUAL SYSTEM 413 • Squint • SENSORY DEPRIVATION IN EARLY LIFE 416 • CONCLUDING REMARKS 417

**APPENDIX  
CURRENT FLOW IN  
ELECTRICAL CIRCUITS    421**

Terms and units • Ohm's law • Membrane model • Capacitance

**GLOSSARY    432**

**BIBLIOGRAPHY    439**

**INDEX    475**
