

# Contents

## INTRODUCTION

The position of the Protozoa among living organisms	1
Principles in the classification of the Protozoa	3

## ANIMAL KINGDOM—PHYLUM 1: PROTOZOA

<b>Class I: Flagellata or Mastigophora</b>	
Classification of the Flagellata	7
The biology of the flagellates	14
Reproduction and sexuality in the flagellates	15
Figures 2–25	20
<b>Class II: Rhizopoda</b>	
Classification of the Rhizopoda	52
Reproduction and sexuality in the Rhizopoda	60
Figures 26–45	66
<b>Class III: Sporozoa</b>	
Classification and developmental cycles of the Sporozoa	92
Figures 46–72	108
<b>Class IV: Ciliata or Ciliophora</b>	
Classification of the Ciliata	135
Reproduction and sexuality of the ciliates	141
Figures 73–100	147

## THE CELL ORGANELLES OF THE PROTOZOA

The nucleus with its somatic function and the endoplasmic reticulum	183
Golgi apparatus and parabasal apparatus	200
Mitochondria and kinetoplast	202
The plastids	207
The pellicle	209
Cuticle and other alloplasmic structures	212
The fibrillar systems of the Protozoa	214
The locomotory organelles	217
Food uptake	229
Digestion	235

Reserve substances	242
Osmoregulation and excretion	244
Extrusomes	248
Sensory organelles and reactions to stimuli	252
Functional morphology	256
Sexuality and heredity	263
Cell associations and cellular differentiation	280
THE PROTOZOA AND THEIR ENVIRONMENT	
The habitat of the free-living Protozoa	285
The Protozoa as parasites and causal agents of diseases	288
Parasitic flagellates	290
Parasitic Rhizopoda	296
Sporozoa	299
Parasitic ciliates	302
Hyperparasitism and the parasites of the Protozoa	304
Bibliography	305
Sources of illustrations	308
Index	311
