

Contents

Part 1

Introduction and Orientation

- 1
- 1 Introduction to Anatomy and Physiology 3**
 - An Approach to the Study of the Body The Cell as the Basic Unit of Life
 - The Internal Environment—Homeostasis The Cell—Its Structure and Function

 - 2 Concepts Important for Understanding Cell Function 17**
 - Chemical Organization Translocation of Materials
 - Metabolism and Energy Exchange Cell Growth and Reproduction
 - Electrical Phenomena

 - 3 Organization of the Body 57**
 - Tissues Skin Anatomical Orientation

Part 2

The Musculoskeletal System

- 85
- 4 Skeleton—The Framework 87**
 - General Osteology Bones of the Skeleton

 - 5 Articulations 134**
 - Fibrous Joints Cartilaginous Joints Synovial Joints

 - 6 Skeletal Muscle System 148**
 - Gross Anatomy of a Skeletal Muscle Principles of Skeletal Muscle Action
 - Muscles of the Body—Their Attachments and Action

 - 7 Muscle Contraction 192**
 - Microscopic and Submicroscopic Anatomy of Skeletal Muscle
 - Excitation and Contraction of Skeletal Muscle Fiber
 - Contraction of Skeletal Muscles Smooth Muscle Cardiac Muscle

Part 3
The Nervous System

217

**8 Introduction to the Nervous System—
Its Organization and Components 219**

Cells of the Nervous System Excitation and Transmission of Impulses

9 The Spinal Cord and Reflexes 243

Anatomy of the Spinal Cord Nerves of the Spinal Cord Spinal Reflexes

10 Anatomy of the Brain and Related Structures 261

Structure of the Brain The Cranial Nerves
Protective and Supportive Structures

11 Sensory Aspects of the Nervous System 286

The General Senses The Special Senses—Vision
The Special Senses—Hearing and Equilibrium The Special Senses—Smell
The Special Senses—Taste

**12 Motor Aspects of the Central Nervous System,
and Higher Brain Functions 322**

Control of Skeletal Muscle Control of Visceral Structures—The Autonomic
System Higher Function of the Central Nervous System Brain Metabolism

13 The Endocrine Glands as a Control System 352

Nature of Hormones and Hormone Action The Pituitary Gland and
Hormone Control Endocrine Glands and Their Secretion

Part 4
Systems of Transport

383

14 Blood 385

The Nature of Blood Formed Elements Plasma Blood Clotting
The Basis of Blood Groups Blood in Acid-Base Balance

15 The Cardiovascular System—The Heart 409

Introduction to the Circulation Structure of the Heart
Excitation of the Heart Extrinsic Innervation of the Heart
Events in the Cardiac Cycle Cardiac Output and its Control

16 Anatomy of the Blood Vessels and Lymphatics 433

Structure of the Blood Vessels The Pulmonary Circuit
The Systemic Circuit The Lymphatic System

17 Circulation of the Blood and Lymph 454

Blood Flow—Hemodynamics Arterial Pressure
The Microcirculation—The Capillary Bed Venous Circulation
Lymphatic Circulation

18 Cardiovascular Adaptations and Adjustments 477

Circulation Through Regions with Special Needs
Cardiovascular Homeostasis—Adjustments to Some Physiological Stresses
Cardiovascular Effects of Some Abnormal Stresses

Part 5

Respiration

493

19 The Respiratory Apparatus—Its Structure and Function 495

Structure of the Respiratory Apparatus Ventilation of the Lungs

20 Gas Exchange and Transport 515

Properties of Gases Diffusion of Gases Transport of Oxygen
Transport of Carbon Dioxide Role of Respiration in Acid-Base Balance

21 The Control of Respiration 527

The Respiratory Cycle Pulmonary Ventilation Respiratory Problems

Part 6

Metabolic Processes and Energy

539

22 Anatomy of the Digestive System 541

General Structure of the Digestive Tract Organs of the Digestive System
Blood Supply Innervation of the Digestive Tract
Peritoneum

**23 Digestive and Absorptive Functions
of the Gastrointestinal Tract 564**

Control of the Digestive Tract
Motor and Secretory Functions of the Digestive Tract
Absorption

24 Metabolism of Foodstuffs	589	
Some Basic Considerations	Carbohydrate Metabolism	Fat Metabolism
Protein Metabolism	Endocrine Regulation of Metabolic Processes	
Some Conditions that Require Metabolic Adjustments		
Metabolism of Other Substances		

25 Energy Metabolism	620	
Energy Balance	Sources of Energy	Energy Expenditure

26 Body Temperature and its Regulation	635	
Normal Body Temperature	Heat Gain	Heat Loss
Regulation of Body Temperature		

Part 7

The Urinary System

647

27 The Urinary System	649
Homeostasis and Excretion	Anatomy of the Urinary System
The Formation of Urine	Micturition
28 Regulation of the Extracellular Fluid	666
Reabsorption of Sodium and Potassium	Reabsorption of Water
Tonicity and Osmolarity of the Urine	Renal Regulation of Acid-Base Balance
The Regulatory Role of Renin and Angiotensin	

Part 8

The Reproductive System

679

29 Reproduction and the Male Reproductive System	681
Origin of Gametes and the Individual	The Male Reproductive Organs
Endocrine Function of the Testes	
30 The Female Reproductive System	696
The Female Reproductive Organs	Endocrine Function of the Ovary
The Menstrual Cycle and its Control	Pregnancy
Mammary Glands and Lactation	Control of Fertility
