<b>1. Immunity and Immunology</b>	<b>1</b>
1. Biological Background	1
2. Immunity	6
3. Inflammation	7
4. Phagocytosis	9
5. Kinds of Immunity	19
6. Genetics of Natural Resistance	20
7. Disease and Blood Groups	23
8. Natural Selection	24
9. Acquired Immunity	27
10. Grades of Immunity	28
11. Measurement of Immunity	29
12. Mechanisms of Natural Immunity	30
13. Mechanisms of Acquired Immunity	33
References	38
 <b>2. Antibodies and Antibody Specificity</b>	 <b>43</b>
1. Chemical Constitution of Blood, Plasma, and Serum	43
2. One Antibody, Many Manifestations	44
3. Modes of Behavior	47
4. Specificity	50
5. Nonhomogeneity	52
6. Normal Antibodies	54
7. Electric Charges and Electrophoretic Mobilities	57
8. Relation of Electrophoretic Components to Fractions Obtained by Salting Out	61
9. Molecular Weights	61
10. Size and Shape of Antibody Molecules	65

11. Action of Enzymes on Immunoglobulins	69
12. Reduction of Immunoglobulins	70
13. Allotropy	72
14. Chemical Nature and Analyses of Antibodies	72
15. Nature of Combining Groups of Antibodies	73
16. Valence of Antibodies	76
17. Species Differences	80
18. Methods of Purification	82
19. Formation of Antibodies	87
20. Normal Globulin	99
21. Measurement of Concentration	101
References	108
 <b>3. Antigens</b>	 117
1. Conditions of Antigenicity	118
2. Competition of Antigens	126
3. The Specificity of Antigens	127
4. Nature of Antigenic Determinants (Epitopes)	127
5. Number of Epitopes (Reactive Groups) (Valence) in an Antigen Molecule	133
6. Effect of Chemical Alteration and Conjugation on Specificity	135
7. Conjugation	141
8. Significance of Conjugation Studies	144
9. Influence of Optical Activity	154
10. Inhibition Reaction	160
11. Specificity of Natural Proteins	164
12. Serological Study of Zoological and Botanical Relationships	167
13. Medicolegal Tests	168
14. Organ Specificity	169
15. Toxins	172
16. Toxoids	179
17. Specificity of Carbohydrates	180
18. Lipide Antigens	183
19. Deoxyribonucleic Acids	183
20. Boivin Antigens (Carbohydrate-Lipide-Protein Complexes)	183
21. Haptens	184
References	185

<b>4. Cell Antigens</b>	193
1. Differentiation of Closely Related Species	194
2. Heterogenetic Antigens	195
3. Localization of Cell Antigens	198
4. Bacterial Types	199
5. Virus Antigens	232
6. Antigens of Parasites	238
7. Antigens of Animal Cells	239
8. Structure of Cell Antigens	239
References	241
 <b>5. Blood Groups</b>	 247
A. The ABO Blood Groups	247
1. Group Substances	247
2. Action of Genes	255
3. Basis of the Four Classical Groups	257
4. Agglutinins	257
5. Importance in Transfusion	258
6. Inheritance	259
7. Applications to Legal Medicine	265
8. Occurrence of A and B in the Human Body	
Outside of the Erythrocytes	267
9. Blood Group Enzyme	268
10. Secreting and Nonsecreting Types	268
B. The MNS Blood Groups	269
1. Discovery of M and N	269
2. Differences from the ABO Blood Groups	269
3. Inheritance of M and N	270
4. Application to Forensic Medicine	270
5. The S Factor	271
6. Inheritance of MNS	272
C. The Rh Blood Groups	272
1. Discovery of Rh	272
2. Rh and Transfusion Reactions	273
3. Rh and Erythroblastosis Fetalis	274
4. Inheritance of Rh Blood Groups	276
5. Forensic Applications of Rh	282
6. Possibilities of Isoimmunization in Rh Series	282
7. Rh Antigens	284
8. Anti-Rh Antibodies	284
D. Other Blood Group Systems	285

E. General Considerations	286
1. Number of Blood Group Specific Receptors (Epitopes) per Erythrocyte	286
2. Ontogenetic Development of Group-Specific Factors	287
3. Forensic Applications of Blood Groups: General	288
4. Blood Groups and Race	289
5. Gene Frequencies	290
6. Related Factors in Animals	292
7. Function of the Group Substances: Blood Groups and Disease	294
8. Blood Groups of Ancient Human Remains	296
9. Obtaining Sera for Blood Grouping	296
10. Lectins	297
References	299
 6. Antibody-Antigen Reactions	 305
1. Basic Facts	305
2. The Two Stages of Serological Reactions	308
A. First Stage: Combination	308
1. Mode of Combination Between Antibody and Antigen	308
2. Size of Reacting Groups	311
3. Nature of the Reactive Group	314
4. Reversibility of Serological Reactions	320
5. Heat of Serological Reactions	323
6. Effect of Varied Conditions on the First Stage of Antibody-Antigen Reactions	334
B. Second Stage: Neutralization, Complement Fixation, Precipitation, Etc.	335
1. Complement Fixation	335
2. Lysis	335
3. Bacteriolysis	336
4. Neutralization of Toxins and Viruses	337
5. Agglutination	343
6. The Precipitin Reaction	349
References	379
 7. Complement and Complement Fixation	 387
1. Complement	387
2. Mechanism of Action	388
3. Species Differences	388
4. Origin	389
5. Nature of Complement	390

6. Effect of Various Reagents	390
7. "Splitting" of Complement	391
8. Preservation of Complement	393
9. Complement Fixation	393
10. Titration of the Components of Complement	399
11. Actual Weight of Complement Involved in Fixation	400
12. Anticomplementary Effect	401
13. Quantitative Formulation of Course of the Fixation Reaction	402
14. Other Effects of Complement	403
15. Effect of Altered Conditions and Various Reagents	404
16. Forensic Complement Fixation Tests	405
17. Applications to Diagnosis of Disease	406
18. The Wassermann Test	406
19. Applications to Other Diseases	407
