xv

SECTION I MANAGEMENT INFORMATION SYSTEMS

CHAPTER 1 THE ORGANIZATION: ITS MANAGERS, STRUCTURE, AND ACTIVITIES	3
Introduction	4
Organization of the Textbook	4
Why Study Management Information Systems?	5
The Environment of Organizations	5
Hierarchy in the Organization Structure	6
<i>Information Flows • Managerial Spans of Control • Information Summarization • Hierarchy in, and Complexity of, Organizations</i>	
Filtering Information	10
Concentration of Authority	11
<i>Centralized Management • Decentralized Management • Coordinative Management</i>	
The Organization's Functions	15
Management Style	15
<i>The Nature of Human Minds • Human Information Processing and Thought Patterns</i>	
Characteristics of Managers	24
The Manager as Part of the Information System	27
Problem Solving by Managers	30
<i>Problem and Opportunity Identification • Information Search • Choosing from among Alternatives • Decision Making</i>	
CHAPTER 2 THE INFORMATION NEEDS AND SOURCES OF MANAGERS	38
Introduction	39
Activities of the Organization	39
Managerial Activities	41
<i>Planning • Overall Reviews and Evaluations (Management Control) • Critical-Problem Analysis • Leadership and Ceremonial Activities • Direct Supervision • Operations Control</i>	

vii

The Time Orientation of Managerial Information Needs	46
Types of Management Decisions and Information Needs	46
Types of Information Needed	48
Sources of Information	50
Uncertainty Absorption	52
The Design of Information Systems for Managers	55
CHAPTER 3 THE CONCEPT OF A MANAGEMENT INFORMATION SYSTEM	64
Introduction	65
The Elements of a Simple Information System	66
Transactions Processing Information Systems	66
Information Systems for Managers	68
External Financial Reporting Information Systems	72
Intelligence Information Systems	74
Decision Support Systems	79
Key-Task Organization of Information Systems	82
Integration of Information Systems	84
The Manager/Machine Interface	89
CHAPTER 4 MANAGEMENT INFORMATION SYSTEMS	96
What Is a Management Information System?	97
A Management Information System: A Matter of Degree	101
Capabilities of a Management Information System	104
<i>Batch Transactions Processing • Single-Transaction Processing • On-line, Real-Time Transactions Processing • Data Communications and Message Switching • Remote Data Entry and File Update • Record Search and Analysis • File Inquiry • Decision Algorithms and Models • Office Automation</i>	
Reporting Capabilities	111
<i>Principles of Reporting • Report Presentation Modes • Types of Reports</i>	
Information Resources Management (IRM)	123
<i>What Is IRM? • The Ingredients of IRM • Organizing for IRM</i>	
The Need for a Management Information System	128
Why Managers Are Often Frustrated with Their Management Information System	128
 SECTION II FUNDAMENTALS OF COMPUTER SYSTEMS	
CHAPTER 5 GENERAL CHARACTERISTICS OF COMPUTER INFORMATION SYSTEMS	139
The Rise of Computers	140
What Managers Should Know about Computer Systems	141

The Importance of Computers	142
What Is a Computer System?	144
Types of Computer Systems	145
The Information Technology Industry	148
<i>The Development of the Industry • The Economics of Change in the Computer Industry • The Computer Marketplace</i>	
Careers in the Information Technology Industry	154
<i>Types of Positions Available • Certification Programs</i>	
CHAPTER 6 COMPUTER SYSTEMS	162
A Computer-Based Information System	163
The Central Processing Unit	163
Systems Programs	166
Data File and Record Systems	166
<i>Manual versus Computer Files • Internal Representation of Data</i>	
Main Memory: MOS Chips	170
Secondary Memory	171
<i>Magnetic Reel Tape • Hard Disk Storage Devices • Bubble Memory • Floppy Disks</i>	
A Computer Information System	180
<i>Channel Devices and Controllers</i>	
Indicators of Computer Power	183
Data Collection and Input-Output Systems	185
Input Devices and Media	188
<i>Punched Paper Cards • Terminal Entry Systems • Magnetic-Ink Character Recognition • Optical Character Recognition • Point-of-Sale Data Entry • Key-to-Tape Systems and Key-to-Disk Systems</i>	
Output Devices and Media	199
<i>Printers • Plotters • Microfilm and Microfiche</i>	
CHAPTER 7 COMPUTER SOFTWARE	208
What Is Software?	209
Types of Software	210
<i>Operating Systems • Utility Programs • Special-Purpose Programs</i>	
Applications Programs and Their Operation	212
Programming Languages	213
<i>Machine Languages • Assembly Languages • Procedural Languages • Interactive Languages • File and Data Base Query Languages • Productivity Languages • Specialty Languages</i>	
Comparison of the General Types of Languages	223
Language Translation	224
Choosing a Programming Language	225
<i>COBOL • FORTRAN • BASIC • PL/1 • FOCUS • RPG-II • ADA • Choosing a Language • Students' Perspective on Language Portability</i>	
Programming in Context	231

CHAPTER 8 MICROCOMPUTERS	236
The Excitement of Microcomputers	237
Definitions of Microcomputers	239
A Microcomputer System	241
Microcomputer Users	245
Microcomputers in the Office	247
Information Services for Microcomputers	250
Microcomputer "Friendliness"	251
Incompatibility Problems of Microcomputers	251
Limitations of Microcomputers	253
Microcomputers and Data Security	254
Trends in Microcomputers	255
Why Are Microcomputer Systems Important?	257
Two Families of Microcomputers: Apple and IBM	259
Getting Started with Microcomputers	263
 CHAPTER 9 DATA COMMUNICATIONS AND DISTRIBUTED PROCESSING SYSTEMS	 272
Data Communications	273
Telecommunications Systems	274
<i>A Simple Data Transmission System</i>	
Telecommunications Lines	276
Computer-Controlled Data Transmission	278
High-Speed Data Transmission	281
<i>Microwave Data Transmission • Satellite Data Transmission • Laser Data Transmission</i>	
Commercial Communications Networks	284
Network Concepts	285
<i>External Networks • Local Area Networks</i>	
Distributed Data Processing	291
<i>A Definition • Tailoring the Information System to the Organization • New Technology • The Distribution Options • Advantages and Disadvantages of DDP</i>	
 CHAPTER 10 CONVENTIONAL AND DATA BASE FILE ORGANIZATIONS	 302
Data Files: The Key to Information Availability and Processing Efficiency	303
Conventional File Organizations	304
<i>Sequential File Organization • Direct Access File Organization • Indexed</i>	
<i>Sequential File Organization</i>	
The Conventional Data Processing Approach	309
Data Bases: A Preview	313
Data Base File Organizations	314
<i>Inverted List File Organization • Hierarchical (Tree) File Organization •</i>	

<i>Network File Organization • Relational Data Base Systems</i>	
Data Bases: Some Characteristics and Benefits	325
CHAPTER 11 DATA BASE SYSTEMS	334
Information as a Resource	335
What Is a Data Base?	336
Components of a Data Base	338
The Data Base Management System	341
The Geography of Data Bases	344
Data Base Technology: A Summary	344
Operations Data Bases	346
Managerial Data Bases	347
Comparison of Data Base Management Systems	351
Design Principles for Data Bases	352
The Impact of Data Bases on Management Processes	355
Data Base Administration	356
Disadvantages of Data Bases	358
CHAPTER 12 ACCOUNTING INFORMATION SYSTEMS	369
Functional Information Systems	370
General Characteristics of Accounting Information Systems	371
Data Summarization in Accounting Information Systems	374
Coding Systems	374
Responsibility Accounting Information Systems	380
Cost Accounting Information Systems	385
The Accounting Process	387
The General Ledger System	389
The Financial Reporting Information System	394
The Sales Order Entry System: Batch Basis	394
The Sales Order Entry System: On-Line, Real-Time	397
Accounting Software Packages	401
CHAPTER 13 MARKETING AND MANUFACTURING INFORMATION SYSTEMS	411
The Marketing Information System	412
<i>Overview of the Marketing Information System • The Sales Information System • The Market Research and Intelligence Information System • The Promotion and Advertising Information System • The New Product Development Information System • The Sales Forecasting Information System • The Product Planning Information System • The Product Pricing Information System • The Expenditures Control Information System</i>	
Manufacturing Information Systems	426
<i>The Nature of Production Activities • The Present Status of Production Operations • Production Processes and Information Needs • Materials Requirements Planning</i>	

SECTION III DEVELOPING INFORMATION SYSTEMS

CHAPTER 14 INTRODUCTION TO SYSTEMS INVESTIGATIONS	447
What Is a Systems Investigation?	448
Why Study Systems Investigations?	448
The Life Cycle of an Information System	450
<i>The Concept • Economics of the Life Cycle</i>	
The People Involved in a Systems Investigation	454
People Problems in Systems Investigations	457
<i>Avoiding People Problems</i>	
General Principles of Systems Investigations	461
Auditors' Roles in Systems Investigations	466
Control of Systems Investigations	468
<i>Management Control of Systems Development Processes •</i>	
<i>The Systems Steering Committee</i>	
Planning for Information Systems	471
Project Management Systems	474
<i>Bar Charts • Program Evaluation Review Technique (PERT)</i>	
CHAPTER 15 THE PRELIMINARY STUDY AND SYSTEMS ANALYSIS PHASES	485
Introduction	486
The Nature of Systems Analysis	486
Structured Analysis	487
Types of Systems Investigations	488
<i>Hardware Projects • Software Projects • Management Information</i>	
<i>Systems Projects</i>	
A Perspective on Information Systems Development	494
General Approaches to Systems Investigations	496
The Preliminary Study Phase	497
The Systems Analysis Phase	500
<i>The Systems Study Proposal • The Systems Survey • Problem Specification •</i>	
<i>The Systems Study Proposal Revision • Systems Analysis • The Systems</i>	
<i>Requirements Specifications Report</i>	
Systems Analysis Tools and Techniques	508
<i>Interviewing • Flowcharting • Organization Charts • Operating Manuals •</i>	
<i>Position Descriptions • Questionnaires • Systems Documentation and</i>	
<i>Forms Reviews • Document Walk-throughs • Direct Observation • Work</i>	
<i>Measurement • Examination of Other Systems</i>	
CHAPTER 16 INFORMATION SYSTEMS DESIGN AND IMPLEMENTATION	517
Introduction	518
Systems Design	518
<i>The Design Process • Structured Design • Macro Design • Feasibility Studies •</i>	
<i>Selection of Macro Alternatives • Detailed Design • Systems Controls •</i>	

<i>Software: Make or Buy? • Software Development • The Request for Proposal</i>	
The Implementation Phase	541
<i>Personnel Education and Training • Programming • Site Preparation •</i>	
<i>Equipment and Program Installation and Checkout • File Conversion •</i>	
<i>Documentation • System Conversion • Acceptance of the New System</i>	
The Postaudit	548
Systems Maintenance	550
The Systems Investigation Activities: A Synopsis	551
CHAPTER 17 COMPUTER POWER: SOURCES AND SELECTION	561
Introduction	562
Computer Purchase	562
Computer Rental from the Manufacturer	563
Computer Lease from a Third Party	564
Acquisition of a Used Computer	565
Computer Service Centers	567
Timesharing Companies	569
Facilities Management Companies	570
The Criteria for Choice	574
Computer System Selection	576
<i>Turnkey Computer Systems • Choosing a Computer System</i>	
CHAPTER 18 ACQUIRING A SMALL BUSINESS COMPUTER	587
Introduction	588
Is Purchase of a Small Business Computer Justified?	588
Principles of Selection	590
Sources of Business Microcomputers	600
<i>Computer Manufacturers • Package Dealers • Retail Computer Stores •</i>	
<i>Manufacturers' Retail Outlets • Discount Mail-Order Stores • Convenience</i>	
<i>Software Stores • User Clubs</i>	
The Selection Process	603
INDEX	611
