Foreword	1

REPORT OF THE INTERNATIONAL COMMITTEE

Summary	5
I. Introduction	7
II. Physical characteristics of nuclear explosions and their effects	9
Phenomena occurring when nuclear weapons are exploded	9
Effect of size of bomb and height of explosion	10
Electromagnetic pulse	11
Effect of nuclear detonations on human beings	12
Blast wave.	12
Thermal wave	13
Initial radiation	14
Local radioactive fallout	15
Global radioactive fallout	16
Effects of radiation on the body.	16
Nuclear war scenarios	18
Scenario 1: a single 1-Mt bomb	19
Scenario 2: local use of nuclear weapons	21
Scenario 3: all-out nuclear war	22
III. Management of the casualties	22
Scope of the problem	22
Treatment of casualties	25
IV. Short-term effects of a nuclear war.	26
V. Long-term effects of a nuclear war.	28
VI. Conclusion.	32
Glossary	33
Select bibliography	37

ANNEXES

Annex 1. Physical effects of thermonuclear weapons, by J. Rotblat	41
Annex 2. The short-term effects of the use of nuclear weapons in warfare, by L. A. Ilyin & J. Rotblat	65
Annex 3. Short-term and medium-term health effects of thermonuclear weapons and war on individuals and health services, by M. F. Lechat	77
Annex 4. Health effects on individuals and health services of the Hiroshima and Nagasaki bombs, by T. Ohkita	101
Annex 5. Late effects of A-bomb radiation: Hiroshima and Nagasaki, by H. Kato & I. Shigematsu	117
Annex 6. Indirect environmental effects of nuclear war affecting health, by A. Leaf	139
Annex 7. Cancer induction as a result of nuclear war, by C. E. Land & P. Oftedal	147
Annex 8. Genetic damage following nuclear war, by P. Oftedal	163
Annex 9. Teratogenic effects following nuclear war, by P. Oftedal	175
