Part One: Introduction to Information Systems Development		1
<hr/>		
1. Introduction to Information Systems Development		2
Systems Analyst: A Profession Worth Pursuing?	3	
In Perspective	5	
Working Smarter	5	<i>Benchmark</i>
Global Blurring of Industries	6	The Interdependence of Systems and Subsystems 26
Ideas and Information	6	Systems Development Strategies 26
Users: Information Workers	6	Classical Systems Development Life Cycle 27
The Burden of Responsibility	7	Determination of System Requirements 30
What Is Systems Analysis and Design?	9	Design of System 30
Overview of Systems Analysis and Design	9	Development of Software 31
What Systems Analysis Is NOT	11	Systems Testing 31
Systems Analysts' Work	12	Implementation and Evaluation 32
Responsibility for Computer Programming	12	Structured Analysis Development Method 34
Changes in Systems Analysts' Responsibilities	13	Systems Prototype Method 37
Who Are the Users?	14	Reasons for Systems Prototyping 37
<i>Benchmark</i>		Methods for Prototype Development 40
Successful Information Systems: A Joint Effort	16	<i>Benchmark</i>
Business Systems Concepts	16	Which Development Method Is the Right One? 40
What Is a System?	16	Tools for Systems Development 41
Important Systems Characteristics	17	Analysis Tools 41
Business Systems	19	Design Tools 42
Business Information Systems	20	Development Tools 42
Categories of Information Systems	21	Summary 42
Transaction Processing Systems	21	Review Questions 44
Management Information Systems	23	Application Problems 45
Decision Support Systems	25	References 47
Scope of Information Systems	25	
<hr/>		
2. Managing the Application Development Portfolio		48
The Good Old Days of Information Systems	49	Information Systems Planning Methodologies 63
How Systems Projects Are Begun	51	Sources of Project Requests 64
Reasons for Project Proposals	52	Managing Project Review and Selection 67
<i>Benchmark</i>		Steering Committee Method 67
Corporate Mission and the Role of Information Systems	63	

Information Systems Committee Method	69	<i>Benchmark</i>	
User-Group Committee Method	70	Preliminary Investigation of User-Developed Applications	79
Other Methods	71	Selecting the Project Development Strategy	80
<i>Benchmark</i>		Institutional Versus End-User Applications	80
Steering the Course in Information Systems Development	71	End-User Development Approach	81
Managing the Portfolio Direction	72	Development Strategies for Institutional Applications	85
Integrating the Application Portfolio	73	Summary	86
The Project Request	74	Review Questions	88
Preliminary Investigation	74	Application Problems	89
Scope of Study	75	References	92
Conducting the Investigation	77	<i>Case Study Phase I</i>	
Testing Project Feasibility	77	Sevco Industries: A Profile	93
Handling Infeasible Projects	79		

Part Two: Requirements Analysis and Determination **101**

3. Tools for Determining Systems Requirements **102**

The Receiving-Room Fiasco	103	<i>Benchmark</i>	
What Is Requirements Determination?	105	Fact Finding: A Challenge and an Opportunity	118
Activities in Requirements Determination	106	Tools for Documenting Procedures and Decisions	119
Basic Requirements	107	Decision Concepts	120
User Transaction Requirements	111	Decision Trees	122
User Decision Requirements	112	Decision Tables	126
Organization-Wide Requirements	114	Types of Table Entries	131
<i>Benchmark</i>		<i>Benchmark</i>	
When the Exception Is the Rule	114	Making Good Use of Analysis Tools	134
Fact-Finding Techniques	115	Structured English	138
Interview	115	Summary	143
Questionnaire	116	Review Questions	144
Record Review	117	Application Problems	145
Observation	118	References	147

4. Structured Analysis Development Strategy **148**

Static or Not: That's the Question	149	<i>Benchmark</i>	
Structured Analysis	151	Data Flow Tools: Beyond Analysis	155
What Is Structured Analysis?	152	Notation	157
What Is Data Flow Analysis?	153	Parallel Activities	158
Features of Data Flow Strategy	154	Advantages of Data Flow Analysis	159
Tools of Data Flow Strategy	154		

Developing Data Flow Diagrams	162	Why Is a Data Dictionary	
Development Process	162	Important?	185
<i>Benchmark</i>		What Does a Data Dictionary	
Using Physical and Logical Data Flow		Record?	187
Diagrams	176	Describing Data Elements	188
General Rules for Drawing Logical		Describing Data Structures	191
Flow Data Diagrams	176	Notation in the Data Dictionary	197
Explode Processes for More Detail	177	Recording Data Descriptions	198
Maintain Consistency Between		Defining Data Flows and Stores	198
Processes	179	Defining Data Structures	199
Follow Meaningful Leveling		Describing Processes	200
Conventions	179	Using the Data Dictionary Details	200
Add Control on Lower-Level		<i>Benchmark</i>	
Diagrams Only	179	The Data Dictionary	202
Evaluate Data Flow Diagram for		Summary	205
Correctness	182	Review Questions	206
Features of a Data Dictionary	184	Application Problems	207
What Is a Data Dictionary?	184	References	211

5. Application Prototype Development Strategy 212

Test Drive	213	Personal Computers	232
Purpose of Application Prototyping	215	Libraries of Reusable Code	233
Uses of Application Prototyping	215	Prototype Strategies	234
Rationale for Application		Prototype the Screens Only	234
Prototyping	216	Prototype the Processing	
Candidate Applications	218	Procedures Only	235
Steps in Prototype Method	219	Prototype the Mainline Functions	
Identify Known Requirements	221	Only	236
Develop Working Model	221	<i>Benchmark</i>	
User Prototype	223	Fitting Prototyping Tools to the Task	
Review Prototype	223	at Hand	237
Repeat as Needed	224	Misconceptions About Prototyping	238
Use of Prototypes	224	A Trivial Activity	238
Abandon Application	224	For Small Applications Only	238
Implement Prototype	225	For Simple Applications Only	238
Redevelop Application	225	Token User Involvement	238
Begin New Prototype	226	A Prototyping Example	239
<i>Benchmark</i>		Voice-Mail Application	239
Starting Point: Understand User		Second Iteration	241
Requirements	226	Third Iteration	243
Tools for Prototyping	227	Fourth Iteration	243
Fourth-Generation Languages	227	Full Implementation	244
Report Generators	229	Summary	245
Application Generators	230	Review Questions	246
Screen Generators	231	Application Problems	246
Data Dictionary Systems	232	References	249

6. Computer-Aided Systems Tools			250
Automating the Art	251	Main Facilities Menu	267
Role of Tools	252	Drawing Data Flow Diagrams	267
Benefits of Using Tools	252	<i>Benchmark</i>	
Benefits of Computer-Assisted Tools	254	CASE Tools: Looking Ahead	277
Categories of Automated Tools	256	Assessment of CASE	277
Front-End Tools	256	Benefits of CASE	277
Back-End Tools	256	Weaknesses of CASE	278
Integrated Tools	257	<i>Benchmark</i>	
<i>Benchmark</i>		Keeping CASE Tools in Perspective	281
Use of Automated Tools	259	Summary	282
Computer-Assisted Systems		Review Questions	283
Engineering (CASE) Tools	260	Application Problems	283
CASE Components	260	References	284
Integrating Tools in CASE	263	<i>Case Study Phase II</i>	
Using a CASE Tool	266	Systems Analysis of Sevco Industries	286
Getting Started	267		

Part Three: Systems Design **321**

7. The Analysis-to-Design Transition			322
A Token User?	323		
Specifying Application Requirements	325	Design of Input	344
Investigation Objectives	325	Design of Control	346
Analysis of Facts	325	Design of Procedures	346
Sample Analysis	331	Design of Program Specifications	346
Identification of Requirements	333	<i>Benchmark</i>	
Selection of Requirements		Maintenance: Keeping the System Useful	347
Fulfillment Strategies	334		
Objectives in Designing an Information System	336	Managing the Design Process for Institutional Applications	348
Specify the Logical Design Elements	337	Obtaining "Deliverables"	
Support Business Activities	338	Describing System Design	348
Ensure That System Features Meet User Requirements	338	Monitoring Design Process	349
<i>Benchmark</i>		Selecting Hardware and Software Involving Users	350
Fitting the System to the Organization	339	Managing End-User Developed Systems	351
Provide a System Engineered for Ease of Use by People	339	End-User Design Responsibilities	352
Provide Detailed Software Development Specifications	340	Systems Analysts' Responsibilities	352
Conform to Design Standards	341	Summary	355
What Features Must Be Designed?	341	Review Questions	356
Elements of the Design	342	Application Problems	357
Design of Output	342	References	359
Design of Files	343	<i>Case Study Phase III</i>	
Design of Database Interactions	343	From Analysis to Design at Sevco Industries	360

8. Design of Computer Output			370
A Picture for a Thousand Words	371	Designing Printed Output	392
How to Identify Computer Output		Printed Reports	392
Needs	372	Developing a Printed Output	
Output Objectives	373	Layout	398
Types of Output	375	Designing Printed Output	400
Key Output Questions	376	Designing Visual Display Output	406
<i>Benchmark</i>		Layout of Display Screens	407
Designing Computer Output:		<i>Benchmark</i>	
When Less Is Better	377	Display Screens	407
How to Present Information	378	Screen Design	407
Tabular Format	378	Summary	414
Graphic Format	381	Review Questions	415
Color Presentation	391	Application Problems	415
		References	417
<hr/>			
9. Design of Input and Control			420
Manual Is Cheaper	421	Transaction Validation	442
What Concerns Guide Input Design?	423	Checking the Transaction Data	444
Objectives of Input Design	423	Modifying the Transaction Data	447
Capturing Data for Input	425	<i>Benchmark</i>	
Data Capture Guidelines	425	Input Validation: Keeping Up with	
Design of Source Document	426	Changing Needs	449
<i>Benchmark</i>		Summary	451
State-of-the-Art Forms Generation	440	Review Questions	452
Input Validation	441	Application Problems	452
Checking the Transaction	441	References	455
<hr/>			
10. Design of Online Dialogue			456
Second Nature	457	<i>Benchmark</i>	
How Is Online Different?	458	Artificial Intelligence	475
Immediate Response to User		Question/Answer Dialogue	475
Requests	459	Data Entry Dialogues	475
Less Predictable Demand	459	Data Entry Templates	476
Direct Contact Between System		Question/Answer Prompt	476
and User	459	Editing in Online Systems	478
What Is an Interface?	460	Screen Management	480
Purpose of Interface	460	<i>Benchmark</i>	
Characteristics of Interface	461	Selecting Dialogue Strategies in	
<i>Benchmark</i>		Specific Applications	492
Interface Devices	462	Summary	493
Actions Occurring at Interface	462	Review Questions	494
Designing Dialogue	465	Application Problems	495
Dialogue Charts	465	References	499
Dialogue Design Decisions	467	<i>Case Study Phase IV</i>	
Dialogue Strategies	468	Design of Output and Input for	
Menu-Driven Dialogue	468	Sevco Industries	500
Keyword Dialogue	473		

11. Design of Files and Use of Auxiliary Storage Devices		530	
Fall Out for Roll Call!	531	Direct-Access Organizations	546
Basic File Terminology	532	Indexed Organization	551
Data Item	532	<i>Benchmark</i>	
Record	534	Storage Structures	556
Record Key	536	Magnetic Tape	556
Entity	536	Storing Data on Magnetic Tape	556
File	536	Sequential File Processing	559
Databases	536	Magnetic Disk	561
Data Structure Diagrams	537	Disk Layout and Design	561
Purpose	537	Track/Cylinder Addressing	561
Notation	537	Track/Sector Addressing	564
Use in File Design	537	Disk Storage Capacity	564
Types of Files	538	Timing Determination	565
Master File	538	Backup and Recovery of Files	565
Transaction File	539	Potential Causes of Data Loss	565
Table File	541	Backup Methods	566
Report File	541	Summary	568
Other Files	543	Review Questions	570
Methods of File Organization	543	Application Problems	570
Sequential Organization	543	References	573

12. Design of Database Interactions		574	
Hold the Sidewalks!	575	Structuring the Data	590
Systems Development in a Database		Normalization	592
Environment	576	Data Manipulation	597
Relationships in Data	576	Hierarchical Data Model	599
Data Structure Diagrams	580	Network Data Model	601
<i>Benchmark</i>		<i>Benchmark</i>	
Entity Relationships:		The Database Administrator	603
A Key to Managing Change	583	Design in a Database Environment	603
The Impact of Database		Summary	605
Management Systems on		Review Questions	606
Systems Design	583	Application Problems	607
Data Models	588	References	608

13. Design for Data Communications		610	
Why Not Lease?	611	<i>Benchmark</i>	
Requirements for Data		Overcoming Barriers of Time and	
Communications Systems	612	Distance	639
Communications Channels	612	Vendor Network Architectures	639
Communications Control Devices	623	Value-Added Carriers	642
Protocol	628	Design of Local Area Networks	645
Selecting the Right Communications		LAN Characteristics	645
Configuration	630	Channels	647
Communications Networks	632	LAN Access Methods	648
Network Topologies	633	PBX/CBX LANs	652
OSI Interconnect Model	635	Interfaces and Gateways	653

Distributed Systems	653	Design of File Processing in a	
Concept of a Distributed System	655	Communications Environment	662
Characteristics of Distributed		Processing Validation	662
Systems	655	Audit Trail	664
Reasons for Designing Distributed		File Handling	666
Systems	657	Summary	668
Distributed Processing System:		Review Questions	669
An Example	659	Application Problems	670
<i>Benchmark</i>		References	673
The Transparent Transformation of		<i>Case Study Phase V</i>	
Data Communications	661	Design of Files and Communications	
		Capabilities for Sevco Industries	674

**Part Four: Implementation, Development Management, and Selection
of Hardware and Software** **687**

14. Systems Engineering and Quality Assurance **688**

How Tested Is "Tested"?	689	Warnier/Orr Diagrams	713
Design Objectives	690	Managing Quality Assurance	717
Designing Reliable Systems	691	Levels of Assurance	717
Designing Maintainable Systems	694	<i>Benchmark</i>	
Program Structure Charts	696	Assessing Systems Reliability:	
Purpose of Structure Charts	696	The Customer Is in Control	718
Notation	697	Testing Strategies	719
Data Passing	698	Managing Testing Practices	721
Design of Software	698	Levels of Tests	721
Top-Down Structure of Modules	699	<i>Benchmark</i>	
Coupling	700	Documentation:	
Cohesion	703	Maintaining Credibility	727
Span of Control	706	Designing Test Data	728
Module Size	706	Testing Libraries	729
Shared Modules	707	Summary	730
Software Design and Documentation		Review Questions	731
Tools	707	Application Problems	732
Structured Flowcharts	707	References	735
HIPO	710		

15. Managing System Implementation **736**

Home for the Holidays	737	<i>Benchmark</i>	
Training	739	Management's Perspective on	
Training Systems Operators	739	Training	744
User Training	740	Conversion	746
Training Methods	742	Conversion Methods	746

<i>Benchmark</i>		Review Methods	759
Preparedness: Making Direct		Summary	761
Cutover Work	749	Review Questions	763
Conversion Plan	751	Application Problems	763
Site Preparation	754	References	766
<i>Benchmark</i>		<i>Case Study Phase VI</i>	
Finding the Weak Links in a System	755	Processing Design and	
Data and File Preparation	755	Implementation of the New	
Postimplementation Review	758	System at Sevco Industries	767
Review Questions	758		

16. Managing Information Systems Development			786
A Best Guess at Best	787	Project Team Concepts	804
Estimation and Management of		Structured Walkthroughs	807
Development Time	788	<i>Benchmark</i>	
Estimating Time Requirements	789	Outside Consultants	813
<i>Benchmark</i>		Summary	814
Estimation: Meeting the Challenge	803	Review Questions	815
Personnel and Development		Application Problems	816
Management	804	References	817

17. Hardware and Software Selection			818
What You See Is What You Get	819		
Hardware Selection	820	Software Selection	833
Determining Size and Capacity		Evaluation of Software	833
Requirements	820	<i>Benchmark</i>	
Computer Evaluation and		Sales Representatives Are	
Measurement	822	Knowledgeable Experts	839
Plug-Compatible Equipment	825	Software Contracts	839
Financial Factors	825	Summary	841
Maintenance and Support	828	Review Questions	843
<i>Benchmark</i>		Application Problems	844
"Used" Systems: Previously		References	845
Owned Can Be Like New	832		

Index			846
