

Contents

CHAPTER		
1	Introduction	1
2	Monohybrid Inheritance	17
3	Cytological Bases of Inheritance	37
4	Dihybrid Inheritance	67
✓ 5	Probability and Goodness of Fit	85
✓ 6	Linkage, Crossing-Over, and Genetic Mapping of Chromosomes	101
✓ 7	Multiple Alleles, Pseudoalleles, and Blood Group Inheritance	127
8	Multiple Genes	146
9	Statistical Concepts and Tools	154
✓ 10	Sex Determination	166
✓ 11	Inheritance Related to Sex	188
✓ 12	Chromosomal Aberrations	201
✓ 13	Population Genetics	230
14	The Identification of the Genetic Material	247
15	Protein Synthesis and Genetic Coding	269
16	Molecular Structure of the Gene	291

17	Regulation of Gene Action	307
18	The Question of Cytoplasmic Genetic Systems	317
19	Genetics: Problems and Promise	332
APPENDIX		
A	Answers to Problems	343
B	Selected Life Cycles	354
C	The Essential Amino Acids	365
D	Useful Formulas, Ratios, and Statistics	370
E	General References	373
GLOSSARY		376
