

Contents

Chapter I • Mitosis

INTRODUCTION	3	MITOSIS	6	MITOSIS IN REPRODUCTION	20
SUGGESTED EXERCISES	21				

Chapter II • Meiosis and the Normal Chromosomal Complement

INTRODUCTION	23	SPERMATOGENESIS	24	OOGENESIS	36
✓ THE NORMAL CHROMOSOME SET	42				
SUGGESTED EXERCISES	60				

✓ Chapter III • Chromosomal Aberrations

INTRODUCTION	61	CHANGES IN NUMBER	63	PLOIDY AND SOMY	66
• AUTOSOMAL TRISOMIES	70	GONOSOMAL ABNORMALITIES OF NUMBER	79		
SEXUAL DIFFERENTIATION	79	SEX CHROMATIN ANALYSIS	84		
MOsaICISM	86	GONOSOMAL SYNDROMES OF NUMBER	90		
THE XYY ANOMALY AND BEHAVIOR	102				
OTHER DISORDERS OF SEXUAL DEVELOPMENT	105				

x CONTENTS

CHROMOSOMAL REARRANGEMENT	106	INTERCHROMOSOMAL	
EXCHANGES	106	INTERCHROMOSOMAL TWO-BREAK ABERRATIONS	121
MULTIPLE-BREAK ABERRATIONS	132	THE CAUSES OF CHROMOSOMAL	
ABERRATIONS	134		
SUGGESTED EXERCISES	137		

✓ Chapter IV • Mendel's Laws and the Structure of the Genetic Material

INTRODUCTION	140	THE CHROMOSOMAL THEORY	140
THE GENE THEORY	154	THE "MOLECULAR" CONCEPT	163
SUGGESTED EXERCISES	171		

Chapter V • Gene Action and the Mendelian Ratios: Dominance; Pleiotrophism

INTRODUCTION	174	DOMINANCE	174	HOW GENES ACT	187
PLEITROPISM	201				
SUGGESTED EXERCISES	220				

Chapter VI • Gene Action and the Mendelian Ratios: Variable Expressivity and Penetrance; Lethals

INTRODUCTION	224	* VARIABLE EXPRESSIVITY	224	INCOMPLETE
PENETRANCE	227	AGE OF ONSET	244	SEX DIFFERENCES IN GENE
EXPRESSION	245	CAUSES OF VARIABLE EXPRESSIVITY	247	
PHENOCOPIES	249	LETHAL GENES	251	

Chapter VII • Chance and the Mendelian Ratios

INTRODUCTION	265	PROBABILITY	266	WHAT THE GENETIC RATIOS
MEAN	271	EMPIRIC PROBABILITY	278	SIMPLIFYING PROBABILITY
CALCULATIONS	279	SIGNIFICANT DEVIATION FROM EXPECTED RATIOS	287	
SPECIAL TESTS FOR SIGNIFICANCE	291			

CONFIDENCE INTERVALS	304
SUGGESTED EXERCISES	309
APPENDIX I. SQUARES, FACTORIALS, AND SQUARE ROOTS	313
APPENDIX II. CUMULATIVE PROBABILITY AND t	314
APPENDIX III. DISTRIBUTION OF χ^2	315

✓ Chapter VIII • Special Methods of Genetic Inference in Human Genetics; Pedigrees

INTRODUCTION	316	PEDIGREES	317
SUGGESTED EXERCISES	329		

Chapter IX • Sex-Related Inheritance

INTRODUCTION	338	X-LINKAGE	338	TERMINOLOGY	342
SOME FEATURES OF SEX-RELATED INHERITANCE	345				
X-LINKED CONDITIONS	354	DOSAGE COMPENSATION AND THE			
LYON HYPOTHESIS	356	DOUBTFUL X-LINKAGE	363		
MATERNAL INHERITANCE	367				
SUGGESTED EXERCISES	368				

✓ Chapter X • Linkage

THE TYPES OF LINKAGE	377	INFORMATIVE MATINGS FOR LINKAGE		
STUDY	379	MODERN METHODS OF ESTIMATING LINKAGE	388	
KNOWN LINKAGE GROUPS	398	CHIASMA FREQUENCIES	406	
AUTOSOMAL CHROMOSOMAL MAPPING	407			
MAPPING THE X-CHROMOSOME	408			
SUGGESTED EXERCISES	416			

Chapter XI • Special Methods of Genetic Inference from Pooled Data

INTRODUCTION	419	METHODS OF ASCERTAINMENT	419
CORRECTION OF TRUNCATE COMPLETE SELECTION	422	CORRECTION FOR TRUNCATE SINGLE SELECTION	430
		SUGGESTED EXERCISES	433

Chapter XII • The Random Mating Equilibrium as a Special Method of Genetic Inference; and the Problem of Associations

INTRODUCTION	435	DERIVATION OF THE RANDOM MATING LAW	436
RANDOM MATING AND MULTIPLE LOCI	446	GENETIC INFERENCES FROM THE RANDOM MATING LAW	452
		POPULATION ASSOCIATIONS	475
		SUGGESTED EXERCISES	487

Chapter XIII • Consanguinity and Genetic Inference

INTRODUCTION	492	TERMINOLOGY	492	RELATIONSHIP AND
CONSANGUINITY	493	THE GENERAL THEORY OF INBREEDING	495	
CALCULATING THE INBREEDING COEFFICIENT	499	USES OF THE		
INBREEDING COEFFICIENT	507	CONSANGUINITY AND RECESSIVE		
INHERITANCE	511	GENERAL EFFECT OF INBREEDING	520	
SUGGESTED EXERCISES	521			

Chapter XIV • The Study of Twins as a Special Method of Genetic Inference

GENES AND ENVIRONMENT	525	FREQUENCY OF MULTIPLE BIRTHS	531
THE CAUSES OF TWINNING AND OTHER MULTIPLE BIRTHS:			
DIZYGOTIC TWINS	531	MONOZYGOTIC TWINS	534

THE DIAGNOSIS OF ZYGOSITY	535	BY PLACENTATION	535	BY THE
SIMILARITY METHOD	539	UNKNOWN PARENTAL BLOOD GROUPS	541	
CHIMERA TWINS	542	DERMATOLOGYPHICS	542	
SKIN GRAFTING	542	SATELLITE COUNTS	543	
GENETIC INFERENCE FROM TWIN STUDIES	543			

Chapter XV • Allelism

THE PROBLEM	549	PHYSIOLOGICAL INSIGHTS: MOLECULAR	550
COMPLEMENTATION	577	THE SUBSTITUTION PRINCIPLE	585
RECOMBINATION	587	POPULATIONAL EVIDENCE	588

Chapter XVI • Gene Action and the Mendelian Ratios: Genetic Interactions

INTRODUCTION	595	COMPLEMENTARY GENES	596	EPISTATIC
GENES	604	INDIRECT EPISTASIS	619	THE OPERON THEORY
DUPLICATE LOCI	624	ADDITIVE GENES	632	
SUGGESTED EXERCISES	639			

Chapter XVII • The Origin of Genetic Polymorphism: Mutation

INTRODUCTION	642	MUTATION	645	MUTATION RATES	649
TOTAL MUTATION RATES	659	REVERSE MUTATION	662		

xiv CONTENTS

SIGNIFICANCE OF THE MUTATIONAL EQUILIBRIUM	664
SUGGESTED EXERCISES	666

Chapter XVIII • Induced Mutations

EXPERIMENTAL MUTAGENESIS	668	IONIZING RADIATIONS	674
--------------------------	-----	---------------------	-----

Chapter XIX • Maintenance of Polymorphism:
Selection and Genetic Drift

INTRODUCTION	685	NATURAL SELECTION	685	SELECTION AGAINST A
SINGLE ALLELE	687	SELECTION AGAINST ONE HOMOZYGO	689	
SELECTION FAVORING HETEROZYGOTES AGAINST BOTH HOMOZYGOTES	696			
SELECTION AGAINST HETEROZYGOTES ONLY	700	GENETIC DRIFT	705	
WHICH EVOLUTIONARY FORCES ARE AT WORK?	712	MIGRATION	712	
MUTATION	714	DRIFT OR SELECTION?	714	THE CASE FOR
SELECTION	717	MALARIA AND SELECTION	720	THE RH
PROBLEM	733	OTHER BLOOD GROUP PROBLEMS	734	
GENETIC LOADS	735			
SUGGESTED EXERCISES	738			

Chapter XX • Genetic Counseling

GENETIC PROGNOSIS	743	THE FAMILY HISTORY	746	EMPIRIC RISK FIGURES	749	RECURRENCE RISKS	753	MENTAL RETARDATION	753	ABORTIONS	755
-------------------	-----	--------------------	-----	-------------------------	-----	------------------	-----	-----------------------	-----	-----------	-----

Directory of Genetic Units	757
Bibliography	768
Index	863
