ADDRESS OF WELCOME	vii
By WILLIAM A. MIDDLETON, University of Wisconsin	
ISOTOPES IN BIOCHEMISTRY: HISTORICAL BACKGROUND	3
By HANS T. CLARKE, Columbia University	
SEPARATION OF STABLE ISOTOPES	16
By HAROLD C. UREY, Institute for Nuclear Studies, University of Chicago	
<i>Thermodynamic properties of isotopic substances—electrolytic method for separation of the hydrogen isotopes—chemical separation methods: cascade processes—thermal diffusion cascades—cascades of simple separating units—other applications</i>	
THE PREPARATION OF RADIOACTIVE ISOTOPES	43
By GLENN T. SEABORG, University of California	
<i>Bombardment by accelerated neutrons, protons, and deuterons—nuclear chain reaction units—giant cyclotrons—preparation of materials—chemical purification and isolation of products—specific examples of reactions</i>	
RECENT DEVELOPMENTS IN THE AVAILABILITY OF ISOTOPES	56
By PAUL C. AEBERSOLD, Chief of the Isotopes Branch, United States Atomic Energy Commission	
<i>Distribution and use of radioactive isotopes—distribution and use of stable isotopes—availability of isotopes—improvements in and additions to radioisotopes—possible additions to the list of stable isotopes—remarks on individual items: hydrogen, carbon, fluorine, sodium, phosphorus, sulfur, chlorine, argon, potassium, calcium, manganese, iron, cobalt, copper zinc, arsenic, bromine, krypton, strontium, silver, antimony, iodine, gold, mercury, lead, bismuth, astatine</i>	
THE DETECTION OF STABLE ISOTOPES	80
By ALFRED O. NIER, University of Minnesota	
<i>Methods of measuring isotope abundance ratios—the mass spectrometer—refocussing properties of wedge-shaped magnet fields—the measurement of isotope abundance ratios—application of abundance ratio measurements to tracer experiments—accuracy of measurements—the analysis of hydrogen</i>	

FUNDAMENTAL PRINCIPLES OF THE DETECTION AND MEASUREMENT OF RADIOACTIVITY	105
By CHARLES D. CORYELL, Massachusetts Institute of Technology	
<i>Definitions and literature—radioactive decay—density of ionization in air from different radiations—the electroscope and the Geiger counter—interpretation of counter absorption curves—some other principles of radiochemical measurement</i>	
ASSAY OF RADIOACTIVE ISOTOPES IN BIOLOGICAL RESEARCH	141
By MARTIN D. KAMEN, Washington University, St. Louis	
<i>Instrumentation available—isotopic assay: tritium (H^3), short-lived carbon (C^{14}), long-lived carbon (C^{13})</i>	
PREPARATION OF COMPOUNDS CONTAINING ISOTOPES	161
By DONALD B. MELVILLE, Cornell University Medical College	
<i>Preparation of compounds containing hydrogen, nitrogen, sulfur, and carbon</i>	
STUDIES ON THE METABOLISM OF PROTEINS	182
By DAVID B. SPRINSON, Columbia University	
<i>Dynamic state of tissue proteins—rate of protein synthesis and nitrogen transfer—mechanism of protein synthesis—possible occurrence of reversible dehydrogenation in proteins—interrelationships between protein and non-protein nitrogen</i>	
THE USE OF ISOTOPES IN THE STUDY OF INTER-MEDIARY CARBOHYDRATE METABOLISM	209
By HARLAND G. WOOD, Western Reserve University	
<i>Investigations with P^{32}: role of phosphate in glycolysis, in vitro studies, in vivo studies, the problem of determining intracellular phosphate—Investigations with deuterium: principles of Stetten's procedure, distribution of deuterium in urinary Glucose, reliability of the method as applied to study of glycogen synthesis from different compounds—Investigations with carbon isotopes: tricarboxylic acid cycle, conversion of lower fatty acids to glycogen, ATP and TPN and the fixation of carbon dioxide</i>	
THE INTERMEDIARY METABOLISM OF LIPIDS	243
By KONRAD BLOCH, University of Chicago	
<i>Rates of regeneration of tissue lipids—biological interrelationships of steroids—pathways of fatty acid oxidation—acetic acid as an intermediate in lipid metabolism—mechanism of fatty acid synthesis</i>	

TRACER STUDIES ON THE METABOLISM OF MINERAL
ELEMENTS WITH RADIOACTIVE ISOTOPES 261

By DAVID M. GREENBERG, University of California Medical School

Metabolism of the bone salts—rickets—healing bone fractures—elements of catalytic function: iron, cobalt, manganese, zinc—carbohydrate metabolism studies with P^{32} : muscle, liver

APPLICATION OF RADIOACTIVE IODINE TO STUDIES
IN IODINE METABOLISM AND THYROID FUNCTION 292

By I. L. CHAIKOFF and A. TAUROG, University of California

Iodine-concentrating capacity of the normal thyroid gland—uptake of labeled iodine by tissues other than the thyroid—formation of diiodotyrosine and thyroxine by the normal thyroid gland—studies with surviving slices of thyroid tissue—the question of exchange—the mechanism of iodine fixation by the thyroid gland—circulating iodine—the role of the anterior pituitary in iodine metabolism

MEDICAL APPLICATIONS OF RADIOACTIVE TRACERS 327

By JOSEPH G. HAMILTON, University of California

Studies in human physiology and biochemistry—radioactive tracers as a prelude to therapeutic applications of the radioelements—the toxicological application of radioactive tracers

THERAPEUTIC USE OF RADIOPHOSPHORUS IN POLYCYTHEMIA VERA, LEUKEMIA, AND ALLIED DISEASES 353

By BYRON E. HALL, Mayo Clinic, Rochester, Minnesota

Results of treatment of polycythemia vera: clinical manifestations, hematological response, lowered incidence of complications, duration of remissions, complications, causes of death, details of treatment—Leukemia and allied diseases: chronic myelogenous leukemia, chronic lymphatic leukemia, acute and subacute leukemia, Hodgkin's disease, multiple myeloma

TREATMENT OF THYROID DISEASE BY MEANS OF
RADIOACTIVE IODINE 377

By SAUL HERTZ, Harvard University

Tracer experiments on goiterous individuals—early clinical trials of I^{130} in hyperthyroidism—criteria of efficacy of the clinical use of radioactive iodine therapy in hyperthyroidism—urinary excretion of I^{130} and I^{131} —physiologic considerations—rationale of radioactive iodine treatment—clinical response to radioactive iodine—treatment of cancer of the thyroid—safety factors for patient and personnel

HEALTH HAZARDS IN THE USE OF RADIOACTIVE ISOTOPES	395
By WILLIAM F. BALE, University of Rochester School of Medicine and Dentistry	
MEASURES FOR THE PROTECTION OF PROPERTY AND PERSONNEL	409
By JAMES J. NICKSON, Memorial Hospital, New York City	
INTERNATIONAL ASPECTS OF ATOMIC ENERGY	423
By HAROLD C. UREY, Institute for Nuclear Studies, University of Chicago	
COMMENTS ON THE DEVELOPMENT OF ATOMIC ENERGY	433
By FARRINGTON DANIELS, University of Wisconsin	
PANEL DISCUSSIONS ON SPECIAL TOPICS	443
