
CONTENTS

1	INTRODUCTION.....	1
	Classification of Genetic Disorders	3
	The Family History	4
	The Genetic Point of View	4
2	THE CHROMOSOMAL BASIS OF HEREDITY	6
	The Human Chromosomes	6
	Mitosis	14
	Meiosis	18
	Medical Applications of Chromosome Analysis	24
3	THE MOLECULAR STRUCTURE AND FUNCTION OF CHROMOSOMES AND GENES	27
	The Nucleic Acids: A Brief Review	27
	Classes of DNA in the Genome	30
	Gene Structure	31
	Transcription	33
	Translation	34
	Recombinant DNA Technology	35
	Mutation	39
	The Fine Structure of Chromosomes	40
4	PATTERNS OF SINGLE-GENE INHERITANCE.....	44
	Autosomal Inheritance	46
	X-Linked Inheritance	58
	Variation in Gene Expression	65
5	HUMAN BIOCHEMICAL GENETICS	79
	The Hemoglobins	79
	The Thalassemias	88
	Human Biochemical Disorders	93
	Pharmacogenetics	103
✓ 6	CHROMOSOMAL ABERRATIONS.....	109
	Classification of Chromosomal Aberrations	109
	Aberrations of Chromosomal Structure	111

Mosaicism	117
Causes of Chromosomal Aberrations	118
Clinical Aspects of Autosomal Disorders	119
Conditions with Defects Demonstrable by High-Resolution Banding ...	128
Chromosomal Breakage Syndromes	130
Chromosomal Changes in Neoplasia	131
 7 THE SEX CHROMOSOMES AND THEIR DISORDERS	 135
Embryology of the Reproductive System	135
The Y Chromosome	136
The X Chromosome	137
Sex Chromosome Abnormalities	141
Disorders of Sexual Development with Normal Chromosomes	146
Hydatidiform Moles	148
 8 IMMUNOGENETICS.....	 151
Immunoglobulins	152
Histocompatibility	155
Complement	159
Genetic Disorders of the Immune System	160
HLA and Disease Associations	161
Autoimmune Diseases	163
 9 BLOOD GROUPS AND SOME OTHER POLYMORPHISMS IN BLOOD.....	 165
Blood Groups	166
Red Cell Enzyme Polymorphisms	178
Plasma Protein Polymorphisms	178
The Significance of Polymorphism	181
 10 SOMATIC CELL GENETICS	 184
Cell Cultures	185
Somatic Cell Hybridization	187
Use of Somatic Cell Hybrids in Gene Mapping	188
Other Methods of Transfer of Genetic Information	189
Complementation	189
Mutation in Cell Cultures	190
Studies of Differentiated Cell Function	190
Conclusion	191
 11 LINKAGE AND MAPPING.....	 193
Linkage Phase	194
Detection and Measurement of Linkage in Family Studies	195
Gene Mapping	203
Clinical Application of RFLPs	204

12	MULTIFACTORIAL INHERITANCE	210
	Normal Variation	211
	Heritability	214
	Threshold Traits	214
	Criteria for Multifactorial Inheritance	221
	Common Diseases of Adult Life	223
	Conclusion	224
13	GENETIC ASPECTS OF DEVELOPMENT	226
	The Development of Hemoglobin	226
	Hereditary Anemias in the Mouse	227
	Chimeras	228
	Differentiation of Transplanted Teratocarcinoma Cells	228
	Incorporation of Foreign Genes into Fertilized Ova	229
	Cloning	230
	In Vitro Fertilization and Embryo Transfer	230
	Congenital Malformations	231
14	ELEMENTS OF MATHEMATICAL GENETICS	237
	Probability	238
	Tests of Genetic Ratios	241
	The X^2 Test of Significance	247
	Bayesian Methods in Risk Estimation	248
15	POPULATION GENETICS	255
	Gene Frequencies in Populations: The Hardy-Weinberg Law	255
	Systems of Mating	257
	Consanguinity	258
	Mutation	260
	Selection	265
	Migration	269
	Eugenics	270
16	TWINS IN MEDICAL GENETICS.....	273
	Monozygotic and Dizygotic Twins	273
	Frequency of Multiple Births	274
	Determination of Twin Zygosity	275
	Limitations of Twin Studies	278
	Examples of Twin Studies	278
	Unusual Types of Twins	280
17	DERMATOGLYPHICS IN MEDICAL GENETICS.....	283
	Embryology	283
	Classification of Dermal Patterns	283
	Clinical Applications	287

18	PRENATAL DIAGNOSIS	291
	Indications for Prenatal Diagnosis	291
	Techniques	292
	Alpha-Fetoprotein (AFP)	294
	Biochemical Disorders	296
	Recombinant DNA Technology in Prenatal Diagnosis	296
	The Organization of Prenatal Diagnosis Programs	297
	Termination of Pregnancy	297
19	GENETIC COUNSELING	300
	The Genetic Counseling Process	300
	Screening for Genetic Disease	305
	Concluding Comments	308
	GLOSSARY	312
	REFERENCES	323
	ANSWERS	329
	NAME INDEX	337
	SUBJECT INDEX	341
