

Contents

I Biochemical Foundations of Medicine

1	The Interplay Between Biochemistry and Medicine	3
2	Growth and Neoplasia	63
3	Kidney—Function and Malfunction	79
4	Acid-Base Physiology and Its Abnormalities	115
5	Liver	131
6	Heme Biosynthesis	161

II Disorders of Metabolism

7	Hypoglycemia	169
8	Lactic Acidosis	179
9	Ketogenesis	187
10	Diabetes Mellitus	195
11	Disorders of Carbohydrate Metabolism	205
12	Disorders of Amino Acid Metabolism	221
13	Disorders of Organic Acid Metabolism	235
14	Nutritional Disorders	251
15	Lipid and Lipoprotein Metabolism	263
16	Purine and Pyrimidine Metabolism and Their Disorders	283
17	Disorders of Porphyrin Metabolism	297

III Disorders of Organs

18	Hematologic Disorders	309
19	Immunity and Infectious Diseases	349
20	Endocrine and Reproductive Disorders	387

21	The Skeleton—Disorders of Bone, Connective Tissue, and Ground Substance	419
22	Gastrointestinal Pathobiochemistry	451
23	Respiratory Disease	465
24	Cardiovascular Pathophysiology	491
25	Muscle: Normal and Abnormal Biochemistry and Function	513
26	Diseases of the Nervous System	529
	Index	557
