Chapter	Page	Chapter	Page
1 The Cellular Environment1		7 The Regulation of Water81	
The Cell ... and its surroundings - "Internal environment" - Fluid loss from the E.C.F. and its control - Plasma & interstitial fluid - Visual models.		Control of volume & concentration by the kidney - Obligatory & Free water reabsorption - The nephron as a counter current multiplier - Water depletion - ADH dependent water loss - ADH independent water loss, renal medullary disease, nephrogenic diabetes insipidus, renal cortical disease - Water retention, ADH dependent & independent.	
2 Coming to Terms with Terms8		8 The Regulation of Hydrogen Ions97	
Basic chemical concepts - Atoms, molecules & ions - Electrolytes & valency - Atomic & molecular weights - The mole, the unit of amount of substance - Equivalents - Some conversions from old units to S.I. - Osmotic & electrical activity - Tonicity - pH.		pH and hydrogen ion concentration - Buffering - The Henderson Hasselbalch equation - Intracellular buffers - Extracellular buffers - The Respiratory Response - The Renal response, bicarbonate trapping, ammonia production, titratable acid - The link between lung and kidney - Respiratory acidosis and alkalosis - Metabolic acidosis and alkalosis (including the concept of the "anion gap").	
3 The Distribution of Body Fluids.....25		9 The Regulation of Potassium119	
Body water content - Distribution between E.C.F. & I.C.F. - Distribution of solutes, electrical & osmotic activity - Distribution between plasma & interstitial fluid - The mechanisms of edema.		Potassium balance - Reabsorption by the kidney - Secretion by the kidney - Hyperkalemia (including "False hyperkalemia") - Potassium gain and potassium shift - Hypokalemia - Potassium loss and potassium shift.	
The Regulation of Body Fluids36		10 The Regulation of Calcium and Phosphate132	
Changes in plasma volume - Changes in interstitial volume - Regulation of E.C.F. - Antidiuretic hormone - Aldosterone - Clinical assessment of the state of body fluid compartments.		Distribution of calcium and phosphate - E.C.F. calcium - Calcium absorption - E.C.F. phosphate - Urinary phosphate - Relationship between calcium and phosphate - Parathyroid hormone - Vitamin D - Hypocalcemia - Hypercalcemia - Hyperphosphatemia - Hypophosphatemia.	
Body Fluids in Abnormal States51		11 Some Therapeutic Guidelines148	
The system under stress - A man in the Sahara - A man in the Pacific Ocean - Diabetes Insipidus - An unconscious patient - Heart failure - Hypoalbuminemia - The important principles of fluid distribution.		An approach to the problems of fluid therapy - How, what and how much to give - Diuretics - Some specific problems - Maintenance fluids - Burns - Bicarbonate therapy - Hyperkalemia and hypokalemia.	
The Regulation of Sodium61			
Sodium balance - The major role of the kidney - Reabsorption in the proximal tubule - Reabsorption in the Loop of Henle - Reabsorption in the distal tubule - Edema - Heart failure - Volume overload - Sodium loss - "Factitious hyponatremia".
