

CONTENTS

PART I

INTRODUCTION TO PHYSIOLOGY: THE CELL AND GENERAL PHYSIOLOGY

Chapter 1 ✓	Functional Systems of the Cell	19
Functional Organization of the Human Body and Control of the "Internal Environment"	Functions of the Endoplasmic Reticulum	19
2	Ingestion by the Cell—Pinocytosis	20
Cells as the Living Units of the Body ...	The Digestive Organ of the Cell—The Lysosomes	21
2	Extraction of Energy from Nutrients.....	22
The Extracellular Fluid—The Internal Environment	Cell Movement	24
2		
"Homeostatic" Mechanisms of the Major Functional Systems	Chapter 3 ✓	
3	Genetic Control of Protein Synthesis, Cell Function, and Cell Reproduction.....	27
Homeostasis	The Gene	27
3	The Genetic Code	29
The Fluid Transport System	Ribonucleic Acid (RNA)	29
3	Messenger RNA—The Process of Transcription	30
Origin of Nutrients in the Extracellular Fluid	Transfer RNA	30
4	Ribosomal RNA.....	31
Removal of Metabolic End-Products	Formation of Proteins on the Ribosomes—The Process of Translation.....	32
4	Synthesis of Other Substances in the Cell	32
Regulation of Body Functions ...	Control of Genetic Function and Biochemical Activity in Cells ...	32
5	Genetic Regulation	33
Reproduction	Control of Enzyme Activity.....	34
5	Cell Reproduction.....	35
The Control Systems of the Body	Replication of the Genes.....	35
5	The Chromosomes and their Replication	35
Examples of Control Mechanisms		
5		
Characteristics of Control Systems		
6		
Automaticity of the Body		
8		
Appendix: Basic Physical Principles of Control Systems		
8		
Oscillation of Control Systems ...		
11		
Chapter 2 ✓		
The Cell and Its Function		13
Organization of the Cell—Protoplasm...		13
Physical Structure of the Cell		14
14		14
Membranes of the Cell		14
14		16
Physical Nature of the Cytoplasm		16
16		18
The Nucleus		18
18		19
Comparison of the Animal Cell with Precellular Forms of Life		19

Mitosis.....	36	Factors that Increase Membrane Excitability	63
Control of Cell Growth and Reproduction.....	37	Inhibition of Excitability— “Stabilizers” and Local	
Cancer.....	37	Anesthetics.....	63
Cell Differentiation	37	Rhythmicity of Certain Excitable Tissues—Repetitive Discharge	63
Chapter 4 <i>Q</i>		Recording Membrane Potentials and Action Potentials	64
Transport Through the Cell Membrane ...	39	Chapter 6 ✓	
Diffusion.....	39	Function of Neuronal Synapses and Neuromuscular Junctions.....	66
Kinetics of Diffusion—The Concentration Difference	40	Physiologic Anatomy of the Synapse	66
Diffusion Through the Cell Membrane	40	Excitatory Functions of the Synapses ...	66
Net Diffusion Through the Cell Membrane and Factors that Affect It	43	Mechanism of Excitation and the Excitatory Transmitter Substance	66
Net Diffusion of Water Across Cell Membranes—Osmosis.....	44	Inhibitory Function of Synapses	71
Active Transport	47	Some Special Characteristics of Synaptic Transmission.....	72
Basic Mechanism of Active Transport	47	Transmission of Impulses from Nerves to Skeletal Muscle Fibers: The Neuromuscular Junction.....	74
Transport Through Intracellular Membranes.....	48	Myasthenia Gravis.....	76
Active Transport Through Cellular Sheets	48	Excitation of Smooth Muscle.....	76
Active Transport of Sodium, Potassium, and Other Electrolytes.....	49	Transmission to Heart Muscle	77
Active Transport of Sugars	50	Chapter 7 ✓	
Active Transport of Amino Acids	50	Contraction of Muscle	79
Pinocytosis and Phagocytosis	50	Physiologic Anatomy of Skeletal Muscle.....	79
Chapter 5 <i>Q</i>		Conduction of Impulses by Skeletal Muscle Fibers.....	81
Membrane Potentials, Action Potentials, Excitation, and Rhythmicity	52	Skeletal Muscle Contraction	82
Basic Physics of Membrane Potentials...	52	Initiation of Contraction by the Action Potential.....	82
Origin of the Cell Membrane Potential	53	The Contractile Process	82
The Action Potential	55	Efficiency of Muscle Contraction	86
Conductance Changes in the Membrane During the Action Potential	55	Characteristics of a Single Muscle Twitch	86
Means by which Conductance Changes Cause the Action Potential	57	Contraction of Skeletal Muscle in the Body.....	87
Propagation of the Action Potential	57	The Motor Unit	87
The Spike Potential and the After-Potentials.....	59	Summation of Muscle Contraction.....	88
Plateau in the Action Potential ...	59	Skeletal Muscle Tone	89
Special Aspects of Impulse Transmission in Nerves	60	Muscle Fatigue	90
Velocity of Conduction in Nerve Fibers	61	The Lever Systems of the Body...	90
Excitation—The Process of Eliciting the Action Potential	61	Special Features and Abnormalities of Skeletal Muscle Function.....	91
		Muscular Hypertrophy	91
		Muscular Atrophy.....	91

Rigor Mortis	91	Contraction of Cardiac Muscle	92
Familial Periodic Paralysis	91	Contraction of Smooth Muscle	92
Myotonia Congenita.....	91	The Contractile Process in	
The Electromyogram	92	Smooth Muscle	94

PART II

BLOOD CELLS, IMMUNITY, AND BLOOD CLOTTING

Chapter 8

Red Blood Cells, Anemia, and Polycythemia	98
The Red Blood Cells	98
Production of Red Blood Cells ...	99
Formation of Hemoglobin	102
Iron Metabolism	103
Destruction of Red Blood Cells.....	105
The Anemias.....	105
Effects of Anemia on the Circulatory System	106
Polycythemia	106
Effect of Polycythemia on the Circulatory System	107

Chapter 9

Resistance of the Body to Infection—The Reticuloendothelial System, Leukocytes, and Inflammation	108
The Reticuloendothelial System	108
The Reticular Structures of the Circulatory System	109
The Leukocytes (White Blood Cells) ...	110
General Characteristics of Leukocytes	110
Genesis of the Leukocytes	110
Life Span of the White Blood Cells.....	112
Properties of White Blood Cells... ..	112
Inflammation and the Function of Leukocytes	113
The Process of Inflammation.....	113
The Macrophage Response in Chronic Inflammation.....	114
Neutrophilia Caused by Other Conditions Besides	115
Inflammation.....	115
The Eosinophils.....	115
The Basophils	115
The Lymphocytes.....	116
Agranulocytosis.....	116
The Leukemias	116
Effects of Leukemia on the Body	117

Chapter 10

Immunity and Allergy	118
The Immune Process	118
Humoral Immunity—Antibodies	119
Function of Lymphocytes in Immunity (Cellular or Lymphocyte Immunity)	121
Function of the Thymus Gland in Immunity	122
Immunologic Tolerance of One's Own Proteins.....	122
Autoimmunity	123
Allergy.....	123
Precipitin Allergies	123
The Delayed Reaction Allergies...	124
The Atopic Allergies (Reagens)...	124

Chapter 11

Blood Groups; Transfusion; Tissue and Organ Transplantation	126
Antigenicity and Immune Reactions of Blood	126
The O-A-B Blood Groups	126
The A and B Antigens—The Agglutinogens	126
The Agglutinins	127
The Agglutination Process in Transfusion Reactions.....	128
Blood Typing.....	128
Cross-Matching	129
The Rh-Hr Blood Types.....	129
Rh Positive and Rh Negative Persons	130
The Rh Immune Response.....	130
Other Blood Factors.....	132
Transfusion	132
Transfusion Reactions Resulting from Mismatched Blood Groups.....	132
Transfusion Reactions Occurring When Rh Factors Are Mismatched	133

Other Types of Transfusion Reactions.....	133	Prevention of Blood Clotting in the Normal Vascular System—The Intravascular Anticoagulants	141
Transplantation of Tissues and Organs	134	Lysis of Blood Clots—Plasmin ...	142
Attempts to Overcome the Antigen-Antibody Reactions in Transplanted Tissue.....	135	Conditions that Cause Excessive Bleeding in Human Beings ...	143
		Decreased Prothrombin, Factor VII, Factor IX, and Factor X—Vitamin K Deficiency	143
Chapter 12		Hemophilia.....	143
Hemostasis and Blood Coagulation	136	Thrombocytopenia	143
Events in Hemostasis	136	Thromboembolic Conditions in the Human Being	144
Vascular Spasm.....	136	Femoral Thrombosis and Massive Pulmonary Embolism	144
Formation of the Platelet Plug ...	136	Anticoagulants for Clinical Use.....	144
Clotting in the Ruptured Vessel...	137	Heparin as an Intravenous Anticoagulant.....	144
Fibrous Organization of the Blood Clot	137	Dicumarol as an Anticoagulant...	144
Mechanism of Blood Coagulation.....	137	Prevention of Blood Coagulation Outside the Body	145
Conversion of Prothrombin to Thrombin	138	Blood Coagulation Tests.....	145
Conversion of Fibrinogen to Fibrin—Formation of the Clot	138	Bleeding Time	145
The Vicious Cycle of Clot Formation	139	Clotting Time.....	145
Initiation of Coagulation: Formation of Prothrombin Activator.....	139	Prothrombin Time	145
		Other Tests Relating to Coagulation	146

PART III

THE HEART

Chapter 13

The Heart as a Pump, the Cardiac Cycle, Cardiac Contractility, and Stroke Volume Output	148	Sounds to Heart Pumping	154
Physiology of Cardiac Muscle.....	148	Stroke Volume Output of the Heart	155
Physiologic Anatomy of Cardiac Muscle.....	148	Work Output of the Heart.....	155
Action Potentials in Cardiac Muscle.....	149	Energy for Cardiac Contraction...	155
Contraction of Cardiac Muscle ...	150	Regulation of Cardiac Function.....	155
The Cardiac Cycle	151	Intrinsic Autoregulation of Cardiac Pumping—The Frank-Starling Law of the Heart	156
Systole and Diastole	151	Control of the Heart by Nerves...	157
Relationship of the Electrocardiogram to the Cardiac Cycle	151	Effect of Heart Debility on Cardiac Function—The Hypoeffective Heart.....	158
Function of the Atria as Pumps...	152	Effect of Exercise on the Heart—The Hypereffective Heart	158
Function of the Ventricles as Pumps	152	Effect of Various Ions on Heart Function	159
Function of the Valves.....	153	Effect of Temperature on the Heart	160
The Aortic Pressure Curve.....	154	The Heart-Lung Preparation.....	160
The Ventricular Volume Curve...	154		
Relationship of the Heart			

Chapter 14		Around the Heart in the	
Rhythmic Excitation of the Heart ✓	162	Chest	176
The Special Excitatory and Conductive		Electrocardiographic Leads	176
System of the Heart	162	The Three Standard Limb Leads	176
The Sino-Atrial Node	162	Chest Leads (Precordial Leads)...	178
The Atrioventricular (A-V) Node		Augmented Unipolar Limb	
and the Purkinje System	163	Leads	178
Transmission in the Purkinje			
System	163		
Transmission of the Cardiac		Chapter 16	
Impulse in the Ventricular		Electrocardiographic Interpretation in	
Muscle	164	Cardiac Myopathies – Vectorial	
Summary of the Spread of the		Analysis	180
Cardiac Impulse Through		Principles of Vectorial Analysis of	
the Heart	164	Electrocardiograms	180
Control of Excitation and Conduction		Use of Vectors to Represent	
in the Heart	165	Electrical Potentials	180
The S-A Node as the Pacemaker		Denoting the Direction of a	
of the Heart	165	Vector in Terms of Degrees ...	181
Control of Heart Rhythmicity		“Axis” of Each of the Standard	
and Conduction by the		and Unipolar Leads	181
Autonomic Nerves	166	Vectorial Analysis of Potentials	
Abnormal Rhythms of the Heart	167	Recorded in Different Leads ...	181
Premature Contractions –		Vectorial Analysis of the Normal	
Ectopic Foci	167	Electrocardiogram	183
Heart Block	167	Vectors Occurring During	
Flutter and Fibrillation	168	Depolarization of the	
Cardiac Arrest	171	Ventricles – The QRS Complex	183
		The Electrocardiogram During	
		Repolarization – The T Wave...	184
		Depolarization of the Atria –	
		The P Wave	184
		The Vectorcardiogram	185
Chapter 15		The Mean Electrical Axis of the	
The Normal Electrocardiogram ✓	173	Ventricle	186
Characteristics of the Normal		Determining the Electrical Axis	
Electrocardiogram	173	from Standard Lead	
Depolarization Waves versus		Electrocardiograms	186
Repolarization Waves	173	Ventricular Conditions that	
Relationship of Atrial and		Cause Axis Deviation	186
Ventricular Contraction to		Conditions that Cause Abnormal	
the Waves of the		Voltages of the QRS Complex	188
Electrocardiogram	174	Increased Voltage in the	
Voltage and Time Calibration		Standard Leads	188
of the Electrocardiogram	174	Decreased Voltage in the	
Methods for Recording		Standard Leads	189
Electrocardiograms	175	Prolonged and Bizarre Patterns of the	
The Pen Recorder	175	QRS Complex	189
Recording Electrocardiograms		Prolonged QRS Complex as a	
with the Oscilloscope	175	Result of Cardiac Hypertrophy	
Flow of Current Around the Heart		or Dilatation	189
During the Cardiac Cycle	175	Prolonged QRS Complex	
Recording Electrical Potentials		Resulting from Purkinje	
from a Partially Depolarized		System Blocks	189
Mass of Syncytial Cardiac		Conditions Causing Bizarre QRS	
Muscle	175	Complexes	190
Flow of Electrical Currents			

Current of Injury	190	Abnormal Sinus Rhythms	195
Effect of Current of Injury on the QRS Complex.....	190	Tachycardia	195
The J Point – The Zero Reference Potential of the Electrocardiogram.....	191	Bradycardia	195
Coronary Ischemia as a Cause of Current of Injury.....	191	Sinus Arrhythmia.....	195
Abnormalities in the T Wave.....	193	Abnormal Rhythms Resulting from	
Effect of Slow Conduction of the Depolarization Wave on the T Wave	193	Block in Impulse Conduction...	196
Prolonged Periods of Depolariza- tion in Portions of the Ventricular Muscle as a Cause of Abnormalities in the T Wave	194	Sino-Atrial Block	196
		Atrioventricular Block.....	196
		Incomplete Intraventricular Block—Electrical Alternans.....	197
		Premature Beats	198
		Atrial Premature Beats	198
		A-V Nodal or A-V Bundle Premature Beats	198
		Ventricular Premature Beats.....	198
		Paroxysmal Tachycardia.....	199
		Atrial Paroxysmal Tachycardia ...	199
		Ventricular Paroxysmal Tachycardia	200
		Abnormal Rhythms Resulting from	
		Circus Movements.....	200
		Atrial Flutter	200
		Atrial Fibrillation	200
		Ventricular Fibrillation	201
Chapter 17			
Electrocardiographic Interpretation of Cardiac Arrhythmias	195		

PART IV

THE CIRCULATION

Chapter 18

Physics of Blood, Blood Flow, and Pressure: Hemodynamics	204
The Circulatory System as a “Circuit”	204
The Physical Characteristics of Blood ...	204
The Hematocrit.....	204
Plasma.....	206
Interrelationships Between Pressure, Flow, and Resistance.....	206
Blood Flow.....	207
Blood Pressure	209
Resistance to Blood Flow.....	211
Vascular Distensibility – Pressure-Volume Curves.....	213
Vascular Compliance	214
Pressure-Volume Curves of the Arterial and Venous Circulations.....	214
“Mean Circulatory Pressure” and Pressure-Volume Curves of the Entire Circulatory System	215
The Mean Circulatory Pressure... Pressure-Volume Curves of the Entire Circulation.....	215

Relationship Between Mean Circulatory Pressure, Mean Systemic Pressure, and Mean Pulmonary Pressure	215
Delayed Compliance (Stress-Relaxation) of Vessels.....	216

Chapter 19

The Systemic Circulation	218
Physical Characteristics of the Systemic Circulation.....	218
Pressure Pulses in the Arteries	219
Factors that Affect the Pulse Pressure	220
Abnormal Pressure Pulse Contours.....	221
Transmission of the Pressure Pulse to the Periphery.....	221
The Radial Pulse	223
The Arterioles and Capillaries	223
The Veins and their Functions.....	224
Right Atrial Pressure and its Regulation	224

Venous Resistance and Peripheral Venous Pressure ...	224	Formation of Lymph	242
Effect of Hydrostatic Pressure on Venous Pressure.....	225	Total Rate of Flow Through the Lymphatic Channels.....	242
Venous Valves and the "Venous Pump".....	226	Control of Interstitial Fluid Protein Concentration and Interstitial Fluid Pressure	243
Reference Point for Measuring Venous and Other Circulatory Pressures.....	227	Regulation of Interstitial Fluid Protein by the Lymphatics	243
Pressure Pulses in the Veins	227	Mechanism of Negative Interstitial Fluid Pressure.....	244
Blood Reservoir Function of the Veins	228	Edema.....	245
Assessment of Venous Function by Measurement of Mean Circulatory Pressure.....	228	Pressure-Volume Curve of the Interstitial Fluid Spaces	245
Chapter 20			
Capillary Dynamics, and Exchange of Fluid Between the Blood and Interstitial Fluid.....	230	Positive Interstitial Fluid Pressure as the Physical Basis for Edema	246
Structure of the Capillary System	230	The Concept of a "Safety Factor" Before Edema Develops	247
Flow of Blood in the Capillaries—Vasomotion.....	231	Edema Resulting from Abnormal Capillary Dynamics	247
Average Function of the Capillary System	231	Edema Caused by Kidney Retention of Fluid.....	249
Exchange of Nutrients and Other Substances Between the Blood and Interstitial Fluid.....	231	Pulmonary Edema.....	249
Diffusion Through the Capillary Membrane	231	Total Tissue Pressure and Solid Tissue Pressure	250
Transport Through the Capillary Membrane by Pinocytosis.....	233	The Presence and Importance of Gel in the Interstitial Spaces	251
Transfer of Fluid Volume Between the Plasma and Interstitial Fluids	233	Chapter 22	
Capillary Pressure.....	233	The Special Fluid Systems of the Body—Cerebrospinal, Ocular, Pleural, Pericardial, Peritoneal, and Synovial	252
Interstitial Fluid Pressure	235	The Cerebrospinal Fluid System	252
Plasma Colloid Osmotic Pressure	236	Cushioning Function of the Cerebrospinal Fluid	252
Interstitial Fluid Colloid Osmotic Pressure	237	Formation of Cerebrospinal Fluid	253
Exchange of Fluid Volume Through the Capillary Membrane	237	Absorption of Cerebrospinal Fluid—The Arachnoidal Villi...	254
The Starling Equilibrium of Capillary Exchange	238	Flow of Fluid in the Cerebrospinal Fluid System	254
Fluid Exchange at the Pulmonary Capillary	238	Cerebrospinal Fluid Pressure.....	254
Chapter 21			
The Lymphatic System, Interstitial Fluid Dynamics, and Edema	241	Obstruction to the Flow of Cerebrospinal Fluid	255
The Lymphatic System	241	The Blood-Cerebrospinal Fluid and Blood-Brain Barriers	255
The Lymph Channels of the Body.....	241	The Intraocular Fluid	256
		Formation of Aqueous Humor by the Ciliary Body	256
		Diffusion into Intraocular Fluid from Other Structures of the Eye	257
		Outflow of Aqueous Humor from the Eye	257
		Intraocular Pressure.....	257
		Fluid Circulation in the Potential Spaces of the Body	258

Fluid Exchange Between the Capillaries and the Potential Spaces	258	Phenomenon of Long-Term Local Blood Flow Regulation...	275
The Pleural Cavity	259	Significance of Long-Term Local Regulation—The Metabolic Mass to Tissue Vascularity Proportionality	275
The Pericardial Cavity.....	259	Roles of Local Blood Flow Regulation and of the Heart in Intrinsic Control of Cardiac Output.....	275
The Peritoneal Cavity	259	Intrinsic Effects of Blood and Extracellular Fluid Volumes on Circulatory Control.....	276
The Synovial Cavities	260	System Analysis of the Fluid Volume Feedback Mechanism... ..	276
Chapter 23		Effect of Local Blood Flow Regulation on the Basic Fluid Pressure Control System	280
The Pulmonary Circulation	261	Composite Analysis Showing the Effect of Local Blood Flow Regulation on the Fluid Feedback Control System	281
Physiologic Anatomy of the Pulmonary Circulatory System	261	Summary.....	282
Pressures in the Pulmonary System.....	262	Chapter 25	
The Pressure Pulse Curve in the Right Ventricle	262	Nervous and Humoral Regulation of the Circulation—The Cardiovascular Reflexes	284
Pressures in the Pulmonary Artery	262	Nervous Regulation of the Circulation... ..	284
Left Atrial and Pulmonary Venous Pressure	262	Autonomic Regulation of the Circulation	284
Effect of Pulmonary Arterial Pressure on Pulmonary Resistance	263	“Patterns” of Circulatory Responses Elicited by Different Central Nervous System Centers.....	287
Backward Transmission of Pressure from the Left Atrium to the Pulmonary Artery.....	263	Effect of Carbon Dioxide on the Activity of the Vasomotor Center	288
Effect of Increased Cardiac Output on Pulmonary Arterial Pressure	264	Effect of Ischemia on the Activity of the Vasomotor Center— The CNS Ischemic Response... ..	289
Blood Flow Through the Lungs and its Distribution.....	264	The Arterial Baroreceptor Control System—Baroreceptor Reflexes	290
Pathologic Conditions that Obstruct Blood Flow Through the Lungs	265	Less Important Circulatory Reflexes	292
The Blood Volume of the Lungs	266	Participation of the Veins in Nervous Regulation of the Circulation	293
Capillary Dynamics in the Lungs	267	Role of the Skeletal Nerves and Skeletal Muscles in Circulatory Control.....	293
Pulmonary Capillary Pressure ...	267	Vasomotor Waves—Oscillation of the Pressure Reflex Control Systems.....	294
Length of Time Blood Stays in the Capillaries	267		
Capillary Membrane Dynamics in the Lungs	267		
Chapter 24			
Intrinsic Regulations of the Circulation ...	270		
Acute Local Blood Flow Regulation in Response to Tissue Need for Flow	270		
Special Examples of Acute Local Blood Flow Regulation.....	273		
Special Types of Local Blood Flow Regulation.....	273		
Long-Term Local Blood Flow Regulation	274		
Collateral Circulation as a			

Respiratory Waves in the Arterial Pressure	294	Cardiac Output in Abnormal Conditions	315
Humoral Regulation of the Circulation	294	Graphical Analysis of Cardiac Output Regulation	316
Effect of Aldosterone in Circulatory Regulation.....	294	Cardiac Function Curves.....	316
Other Humoral Factors	295	Systemic Function Curves	317
Effects of Chemical Factors on Vascular Constriction	296	Analysis of Cardiac Output and Right Atrial Pressure Using Cardiac and Systemic Function Curves.....	319
Chapter 26		Right Ventricular Output versus Left Ventricular Output—Balance Between the Ventricles	320
Regulation of Mean Arterial Pressure; and Hypertension	298	Methods for Measuring Cardiac Output Pulsatile Output of the Heart as Measured by an Electromagnetic or Ultrasonic Flowmeter	321
Normal Arterial Pressures	298	Measurement of Cardiac Output by the Oxygen Fick Method ...	321
The Mean Arterial Pressure	298	The Indicator Dilution Method...	322
Clinical Methods for Measuring Systolic and Diastolic Pressures	299	Estimation of Cardiac Output by the Pulse Pressure Method...	323
Regulation of Arterial Pressure—The Overall System: Nervous, Intrinsic, Humoral	300	Chapter 28	
Rapidly Acting Arterial Pressure Regulation—Nervous Regulation	300	Circulatory Shock and Physiology of Its Treatment	325
Intermediately Acting Arterial Pressure Regulations.....	301	Physiological Causes of Shock.....	325
Long-Term Arterial Pressure Regulation—Role of the Kidney	301	Shock Caused by Hypovolemia—Hemorrhagic Shock.....	325
Hypertension.....	304	Relationship of Bleeding Volume to Cardiac Output and Arterial Pressure	325
Hypertension Involving the Kidney.....	305	Nonprogressive and Progressive Hemorrhagic Shock.....	326
Neurogenic Types of Hypertension.....	308	Irreversible Shock.....	329
“Essential” Hypertension.....	308	Other Causes of Hypovolemic Shock	330
Hypertension Resulting from Adrenocortical Hypersecretion—Primary Aldosteronism	309	Neurogenic Shock—Increased Vascular Capacity	331
Effects of Hypertension on the Body.....	309	Other Types of Shock that Result from Increased Vascular Capacity	331
Chapter 27		Anaphylactic Shock	331
Cardiac Output, Venous Return, and Their Regulation.....	311	Septic Shock	332
Normal Values for Cardiac Output.....	311	Traumatic Shock	333
Regulation of Cardiac Output	312	Effects of Shock on the Body.....	333
Primary Role of Peripheral Circulation and Permissive Role of Heart in Cardiac Output Regulation	312	Physiology of Treatment in Shock.....	333
Regulation of Cardiac Output in Important Experimental Conditions	313	Replacement Therapy.....	333
		Treatment of Shock with Sympathomimetic and Sympatholytic Drugs or Other Therapy	334
		Circulatory Arrest.....	335
		Effect of Circulatory Arrest on the Brain.....	335

Chapter 29			
Cardiac Failure	337	Surgery	357
Dynamics of the Circulation in		Hypertrophy of the Heart in Valvular	357
Cardiac Failure	337	and Congenital Heart Disease...	
Dynamics of Moderate Cardiac			
Failure.....	337	Chapter 31	
Summary of the Changes that		The Coronary Circulation	359
Occur Following Acute		Normal Coronary Blood Flow and	
Cardiac Failure—"Compen-		its Variations	359
sated Heart Failure".....	340	Physiologic Anatomy of the	
Dynamics of Severe Cardiac		Coronary Blood Supply	359
Failure—Decompensated		Normal Coronary Blood Flow.....	359
Heart Failure.....	340	Measurement of Coronary Blood	
Edema in Cardiac Failure	342	Flow in Man	360
Cardiac Shock.....	342	Control of Coronary Blood Flow	360
Unilateral Cardiac Failure	343	Local Blood Flow Regulation as	
Unilateral Left Heart Failure ...	343	the Primary Controller of	
Unilateral Right Heart Failure ...	344	Coronary Flow	360
"High Cardiac Output Failure"—		Nervous Control of Coronary	
Overloading of the Heart	345	Blood Flow.....	362
Physiological Classification of Cardiac		Effect of Drugs on Coronary	
Failure.....	345	Blood Flow.....	362
Cardiac Reserve.....	346	Coronary Occlusion	362
		Causes of Death in Severe	
Chapter 30		Coronary Ischemia	364
Heart Sounds; Dynamics of Valvular		The Stages of Recovery from	
and Congenital Heart Defects	348	Acute Coronary Thrombosis ...	365
The Heart Sounds.....	348	Function of the Heart Following	
Normal Heart Sounds	348	Recovery from Coronary	
Areas for Auscultation of		Occlusion.....	365
Normal Heart Sounds.....	350	Pain in Coronary Disease—	
The Phonocardiogram.....	350	Angina Pectoris.....	365
Abnormal Heart Sounds.....	350	Surgical Treatment of Coronary	
Abnormal Circulatory Dynamics in		Disease.....	366
Valvular Heart Disease.....	352		
Dynamics of the Circulation in		Chapter 32	
Aortic Stenosis and Aortic		Blood Flow Through Special Areas	
Regurgitation.....	352	of the Body	367
Dynamics of Mitral Stenosis and		Cerebral Circulation.....	367
Mitral Regurgitation.....	353	Physiologic Anatomy of Blood	
Abnormal Circulatory Dynamics in		Flow Through the Brain.....	367
Congenital Heart Defects.....	354	Normal Rate of Cerebral	
Patent Ductus Arteriosus—A		Blood Flow.....	367
Left-to-Right Shunt	354	Regulation of Cerebral	
Interventricular Septal Defect—		Circulation	367
A Left-to-Right Shunt.....	355	Measurement of Cerebral Blood	
Interatrial Septal Defects—A		Flow in the Human Being	369
Left-to-Right Shunt	356	The Splanchnic Circulation.....	369
Tetralogy of Fallot—A		Blood Flow Through the Liver... ..	369
Right-to-Left Shunt	356	Portal Venous Pressure	371
Pulmonary Stenosis	357	The Splenic Circulation	372
Use of Extracorporeal		Blood Flow Through the Skeletal	
Circulation in Cardiac		Muscles.....	373
		Rate of Blood Flow Through	
		the Muscles.....	373

Control of Blood Flow Through the Skeletal Muscles.....	373	the Skin	375
Effect of Muscular Blood Flow on Cardiac Output.....	374	Color of the Skin in Relation to Skin Temperature.....	376
Circulation in the Skin.....	374	Physiology of Vascular Diseases of the Limbs.....	376
Physiologic Anatomy of the Cutaneous Circulation.....	374	Raynaud's Disease.....	376
Regulation of Blood Flow in		Buerger's Disease	377
		Peripheral Arteriosclerosis	377

PART V

THE BODY FLUIDS AND KIDNEYS

Chapter 33

The Body Fluids: Osmotic Equilibria Between Extracellular and Intracellular Fluids.....	380
Total Body Water.....	380
Body Fluid Compartments.....	380
The Extracellular Fluid	
Compartment.....	380
Blood Volume.....	381
Measurement of Body Fluid Volumes...	382
The Dilution Principle for	
Measuring Fluid Volumes	382
Determination of Blood Volume	383
Measurement of the Extracellular Fluid Volume.....	384
Measurement of Total Body Water	384
Calculation of Interstitial Fluid Volume.....	384
Constituents of Extracellular and Intracellular Fluids	385
Osmotic Equilibria and Fluid Shifts Between the Extracellular and Intracellular Fluids	386
Basic Principles of Osmosis and Osmotic Pressure	386
Osmolality of the Body Fluids ...	387
Maintenance of Osmotic Equilibrium Between Extracellular and Intracellular Fluids	388
Changes in the Volumes and Osmolalities of the Extracellular and Intracellular Fluid Compartments in Abnormal States.....	388
Calculation of Fluid Shifts Between the Extracellular and Intracellular Fluid Compartments	388
Effect of Adding Water to the Extracellular Fluid.....	389

Effect of Dehydration	390
Effect of Adding Saline Solutions to the Extracellular Fluid.....	390
Effect of Infusing Hypertonic Glucose, Mannitol, or Sucrose Solutions	390
Glucose and Other Solutions Administered for Nutritive Purposes	391
Solutions Used for Physiologic and Clinical Replacement Purposes	391

Chapter 34

Formation of Urine by the Kidney: I. Glomerular Filtration and Tubular Function	393
Physiologic Anatomy of the Kidney.....	393
Basic Theory of Nephron Function	394
Renal Blood Flow and Pressures	394
Blood Flow Through the Kidneys	394
Pressures in the Renal Circulation	395
Intrarenal Pressure and Renal Interstitial Fluid Pressure	396
Function of the Peritubular Capillaries	396
Glomerular Filtration and the Glomerular Filtrate	396
The Glomerular Filtration Rate... Dynamics of Glomerular Filtration.....	397
Regulation of Glomerular Filtration Rate	397
Reabsorption and Secretion in the Tubules	398
Basic Mechanisms of Absorption and Secretion in the Tubules...	399
Absorptive Capabilities of Different Tubule Segments.....	400

Reabsorption and Secretion of Individual Substances in Different Segments of the Tubules	401	Concentrations in the Extracellular Fluids	419
Concentration of Different Substances at Different Points in the Tubules	404	Regulation of Body Water	420
		Intake versus Output of Water ...	420
		Regulation of Water Loss from the Body—The Osmoreceptor-Antidiuretic Hormone System	420
		Thirst	422
		Appetite and Craving for Salt ...	423
Chapter 35		Regulation of Extracellular Fluid	
Formation of Urine by the Kidney:		Volume and Blood Volume ...	424
II. Regulation of Urine Concentration;		The Intrinsic Mechanical System for Extracellular Fluid Volume and Blood Volume Regulation	424
Autoregulation of Renal Blood Flow; and the Concept of Clearance.....	406	Hormonal Factors that Affect	
Concentrating and Diluting Mechanism of the Kidney—The Counter-Current Mechanism...	406	Volume Regulation	425
Regulation of Renal Blood Flow and Glomerular Filtration Rate.....	409	Nervous Reflexes that Affect	
Autoregulation	409	Volume Regulation	425
Relationship of Glomerular Filtration Rate to Urine Output—The Overflow Phenomenon	410		
The Concept of “Plasma Clearance”.....	411	Chapter 37	
Inulin Clearance as a Measure of Glomerular Filtration Rate.....	411	Regulation of Acid-Base Balance.....	427
Para-aminohippuric Acid (PAH) Clearance as a Measure of Plasma Flow and Blood Flow Through the Kidneys	412	Defense Against Changes in Hydrogen Ion Concentration...	428
Calculating the Filtration Fraction from Plasma Clearances	412	Function of Acid-Base Buffers	428
Effect of “Tubular Load” and “Transport Maximum” on Urine Constituents	412	The Bicarbonate Buffer System...	428
Determination of the Transport Maximum	413	The Buffer Systems of the Body Fluids	430
		The Isohydic Principle	431
		Respiratory Regulation of Acid-Base Balance.....	431
		Effect of Hydrogen Ion Concentration on Alveolar Ventilation	433
		Renal Regulation of Hydrogen Ion Concentration.....	433
		Tubular Secretion of Hydrogen Ions	433
		Interaction of Bicarbonate Ions with Hydrogen Ions in the Tubules—“Reabsorption” of Bicarbonate Ions	434
		Renal Correction of Alkalosis—Decrease in Bicarbonate Ions in the Extracellular Fluid.....	435
		Renal Correction of Acidosis—Increase in Bicarbonate Ions in the Extracellular Fluid.....	435
		Transport of Excess Hydrogen Ions from the Tubules into the Urine.....	435
		Rapidity of Acid-Base Regulation by the Kidneys	436
		Special Factors that Can Alter Acid-Base Equilibrium.....	437
		Clinical Abnormalities of Acid-Base	
Chapter 36			
Regulation of Extracellular Fluid Composition and Volume, and Regulation of Blood Volume by the Kidneys and by the Thirst Mechanism	415		
Regulation of Ion Concentrations in the Extracellular Fluids	415		
Regulation of Sodium Ion Concentration—The Aldosterone Feedback Mechanism.....	416		
Regulation of Other Positive Ions	418		
Regulation of Negative Ion			

Balance 437

Respiratory Acidosis and Alkalosis 437

Metabolic Acidosis and Alkalosis 438

Effects of Acidosis and Alkalosis on the Body 438

Respiratory Compensation of Metabolic Acidosis or Alkalosis 439

Renal Compensation of Respiratory Acidosis or Alkalosis 439

Physiology of Treatment in Acidosis or Alkalosis 439

Interrelationships of pH, Dissolved CO₂, and HCO₃ Concentration 439

Chapter 38

Micturition, Renal Disease, and Diuresis 442

Micturition 442

Physiologic Anatomy of the Bladder and its Nervous Connections 442

Transport of Urine Through the Ureters 442

Tonus of the Bladder, and the Cystometrogram During Bladder Filling 443

The Micturition Reflex 443

Abnormalities of Micturition 444

Renal Disease 445

Acute Renal Shutdown 445

Chronic Renal Insufficiency—Decreased Numbers of Nephrons 446

The Nephrotic Syndrome—Increased Glomerular Permeability 450

Specific Tubular Disorders 450

Renal Function Tests 451

Diuretics and Mechanisms of their Actions 452

Diuretics that Increase Glomerular Filtration 452

Diuretics that Increase the Tubular Osmotic Load 453

Diuretics that Inhibit the Secretion of Antidiuretic Hormone 453

PART VI

RESPIRATION

Chapter 39

Pulmonary Ventilation 456

Mechanics of Respiration 456

Basic Mechanisms of Lung Expansion and Contraction 456

The Muscles of Inspiration and Expiration 456

Respiratory Pressures 457

Expansibility of the Lungs and Thorax: “Compliance” 458

The “Work” of Breathing 459

The Pulmonary Volumes and Capacities 460

The Pulmonary “Volumes” 460

The Pulmonary “Capacities” 460

Significance of the Pulmonary Volumes and Capacities 461

Measurement of Pulmonary Volumes and Capacities 462

The Minute Respiratory Volume—Respiratory Rate and Tidal Volume 462

Ventilation of the Alveoli 463

The Dead Space 463

Rate of Alveolar Ventilation 464

Functions of the Respiratory Passageways 464

Functions of the Nose 464

The Cough Reflex 465

Action of the Cilia to Clear Respiratory Passageways 466

The Sneeze Reflex 466

Artificial Respiration 467

Manual Methods of Artificial Respiration—The Back-Pressure Arm-Lift Method 467

Mouth-to-Mouth Breathing 467

Mechanical Methods of Artificial Respiration 467

Chapter 40

Physical Principles of Gaseous Exchange; Diffusion of Oxygen and Carbon Dioxide Through the Respiratory Membrane 470

The Physics of Gases 470

The Vapor Pressure of Water ... 470

The Solution of Gases in Water (Henry's Law).....	471	the Blood.....	490
Pressure of Dissolved Gases	472	Chemical Forms in which Carbon Dioxide Is Transported	490
Partial Pressures	472	The Carbon Dioxide Dissociation Curve	491
Diffusion of Gases Through Liquids	473	Mutual Interference Between Oxygen and Carbon Dioxide Transport in the Blood	491
Diffusion of Gases Through Tissues.....	474	Change in Blood Acidity During Carbon Dioxide Transport.....	492
Composition of Alveolar Air	474	Release of Carbon Dioxide in the Lungs	492
Rate at which Alveolar Air Is Renewed by Atmospheric Air...	475	The Respiratory Exchange Ratio	493
Oxygen Concentration in the Alveoli.....	475		
CO ₂ Concentration in the Alveoli	476		
Expired Air.....	476		
Diffusion of Gases Through the Respiratory Membrane.....	476	Chapter 42	
Factors Affecting Gaseous Diffusion Through the Respiratory Membrane.....	478	Regulation of Respiration	494
Diffusing Capacity of the Respiratory Membrane.....	479	The Respiratory Center	494
		Humoral Regulation of Respiration.....	497
Chapter 41		Effects of Carbon Dioxide and Hydrogen Ion Concentrations on Respiratory Center Activity	497
Transport of Oxygen and Carbon Dioxide in the Blood and Body Fluids	481	The Chemoreceptor System for Control of Respiratory Activity—Role of Oxygen in Respiratory Control	498
Pressure Differences of Oxygen and Carbon Dioxide from the Lungs to the Tissues.....	481	Interrelationships Between the Effects of PCO ₂ and PO ₂ on Respiratory Activity	499
Uptake of Oxygen by the Pulmonary Blood	481	Quantitative Aspects of Humoral Control of Alveolar Ventilation	499
Diffusion of Oxygen from the Capillaries to the Cells.....	483	Carbon Dioxide, the Major Chemical Factor Regulating Alveolar Ventilation.....	500
Diffusion of Oxygen from the Interstitial Fluids into the Cells	483	Control of Alveolar Ventilation by the Hydrogen Ion Concentration of the Extracellular Fluids	500
Diffusion of Carbon Dioxide from the Cells to the Tissue Capillaries	483	Control of Alveolar Ventilation by Arterial Oxygen Saturation	501
Removal of Carbon Dioxide from the Pulmonary Blood	484	Regulation of Respiration During Exercise	502
Transport of Oxygen in the Blood	484	Abnormalities of Respiratory Control...	503
The Reversible Combination of Oxygen with Hemoglobin	484	Respiratory Depression	503
Total Rate of Oxygen Transport from the Lungs to the Tissues	486	Periodic Breathing.....	504
The Oxygen Buffer Function of Hemoglobin	486		
Metabolic Use of Oxygen by the Cells.....	487	Chapter 43	
Transport of Oxygen in the Dissolved State	488	Respiratory Insufficiency	507
Combination of Hemoglobin with Carbon Monoxide.....	489	Methods for Studying Respiratory Abnormalities	507
Transport of Carbon Dioxide in		Physiologic Types of Respiratory Insufficiency	508
		Abnormalities that Cause Alveolar Hypoventilation.....	508

Diseases that Decrease Pulmonary Diffusing Capacity	509	Chronic Emphysema.....	512
Abnormalities of Oxygen Transport from the Lungs to the Tissues.....	510	Hypoxia	512
Physiologic Peculiarities of Specific Pulmonary Abnormalities	510	Cyanosis	513
Tuberculosis	510	Dyspnea	513
Pulmonary Edema.....	510	Hypercapnia	514
Pneumonia	510	Effects of Hypercapnia on the Body.....	514
Atelectasis	511	Oxygen Therapy in the Different Types of Hypoxia.....	514
Bronchial Asthma.....	512	Danger of Hypercapnia During Oxygen Therapy	515
		Absorption of Entrapped Air.....	516

PART VII

AVIATION, SPACE, AND DEEP SEA DIVING PHYSIOLOGY

Chapter 44		Perceptions of Equilibrium and Angular Acceleration in Blind Flying		525
Aviation, High Altitude, and Space Physiology.....	518	Problems of Temperature in Aviation and Space Physiology	526	
Effects of Low Oxygen Pressure on the Body.....	518	Radiation at High Altitudes and in Space	526	
Alveolar PO ₂ at Different Elevations.....	518	“Artificial Climate” in the Sealed Spacecraft	527	
Saturation of Hemoglobin with Oxygen at Different Altitudes...	519	Weightlessness in Space	527	
Effect of Breathing Pure Oxygen on the Alveolar PO ₂ at Different Altitudes.....	519			
The “Ceiling” when Breathing Air and when Breathing Oxygen in an Unpressurized Airplane	520	Chapter 45		
Effects of Hypoxia.....	520	Physiology of Deep Sea Diving and Other High Pressure Operations.....	529	
Acclimatization to Low PO ₂	521	Effect of High Partial Pressures of Gases on the Body.....	530	
Decompression Effects at High Altitudes	522	Decompression of the Diver After Exposure to High Pressures.....	531	
Effects of Acceleratory Forces on the Body in Aviation and Space Physiology	522	Some Physical Problems of Diving.....	534	
Angular Acceleratory Forces.....	523	Scuba Diving (Self-Contained Underwater Breathing Apparatus) ...	535	
Effects of Linear Acceleratory Forces on the Body	524	Special Physiological Problems of Submarines.....	536	
		Drowning.....	536	

PART VIII

THE NERVOUS SYSTEM AND SPECIAL SENSES

Chapter 46		The Sensory Division – Sensory Receptors.....		540
Organization of the Nervous System	540	The Motor Division – The Effectors	541	
General Design of the Nervous System...	540			

Processing of Information	541	Judgment of Stimulus Strength...	562
Storage of Information – Memory	542	Physiological Classification of Nerve	
The Three Major Levels of Nervous		Fibers	563
System Function.....	542		
The Spinal Cord Level.....	542		
The Lower Brain Level	543		
The Higher Brain or Cortical		Chapter 49	
Level.....	543	Somatic Sensations: I. The	
Comparison of the Nervous System		Mechanoreceptive Sensations	565
with an Electronic Computer... 544	544	Classification of Somatic	
		Sensations	565
Chapter 47		Detection and Transmission of	
Transmission and Processing of		Tactile Sensations.....	565
Information in the Nervous System.....	546	Detection of Vibration.....	566
Information, Signals, and		Possibility of a “Muscle Sense”.....	566
Impulses	546	Kinesthetic Sensations	567
Transmission of Signals in Nerve		The Dual System for Transmission of	
Tracts	546	Mechanoreceptive Somatic	
Transmission of Signal Strength	546	Sensations in the Central	
Detection of a Signal at the		Nervous System.....	567
Terminus of the Nerve		Transmission in the Dorsal Column	
Pathway	547	System.....	568
Spatial Orientation of Signals		Anatomy of the Dorsal Column	
in Fiber Tracts	548	Pathway	568
Transmission and Processing of		The Somesthetic Cortex	569
Signals in Neuronal Pools	548	Characteristics of Transmission	
Transmission of Signals Through		in the Dorsal Column Pathway	571
Neuronal Pools	549	Processing of Information in the	
Transmission of Spatial Patterns		Dorsal Column System.....	573
Through Successive Neuronal		Transmission in the Spinothalamic	
Pools.....	551	System.....	573
Prolongation of a Signal by a		The Spinothalamic Pathway	573
Neuronal Pool –		Some Special Aspects of Sensory	
“After-Discharge”	553	Function	575
Continuous Signal Output from			
Neuronal Pools	555	Chapter 50	
Rhythmic Signal Output.....	556	Somatic Sensations: II. Pain, Visceral	
		Pain, Headache, and Thermal Sensations	577
Chapter 48		Qualities of Pain.....	577
Sensory Receptors and Their Basic		Methods for Measuring the	
Mechanisms of Action	557	Perception of Pain.....	577
Types of Sensory Receptors and the		The Pain Receptors and their	
Sensory Stimuli They Detect ...	557	Stimulation.....	578
Differential Sensitivity of		Rate of Tissue Damage as the	
Receptors.....	557	Cause of Pain.....	578
Transduction of Sensory Stimuli into		Tickling and Itch	579
Nerve Impulses.....	558	Transmission of Pain Signals into the	
Local Currents at Nerve Endings		Central Nervous System	580
– Generator Potentials and		The Reaction to Pain	581
Receptor Potentials	558	Referred Pain.....	582
Adaptation of Receptors.....	560	Mechanism of Referred Pain.....	582
Psychic Interpretation of Stimulus		Referred Pain Caused by Reflex	
Strength	562	Muscular Spasm.....	582
		Visceral Pain	582

Causes of True Visceral Pain..... 582
 "Parietal" Pain Caused by
 Visceral Damage 583
 Insensitive Viscera..... 583
 Localization of Visceral Pain—
 Referred Visceral Pain..... 583
 Visceral Pain from Various
 Organs..... 584
 Some Clinical Abnormalities of Pain
 and Other Sensations 585
 Paresthesia 585
 Hyperesthesia..... 586
 Herpes Zoster..... 586
 The Brown-Sequard Syndrome... 586
 The Thalamic Syndrome..... 586
 Tic Douloureux..... 587
 Headache..... 587
 Headache of Intracranial Origin 587
 Extracranial Types of Headache 588
 Thermal Sensations 589
 Thermal Receptors and their
 Excitation..... 589
 Transmission of Thermal
 Signals in the Nervous System... 590

 Chapter 51
The Sense of Hearing 592
 The Tympanic Membrane and the
 Ossicular System 592
 Transmission of Sound from the
 Tympanic Membrane to the
 Cochlea..... 592
 Transmission of Sound Through
 the Bone..... 593
 The Cochlea 593
 Functional Anatomy of the
 Cochlea 593
 Transmission of Sound Waves in
 the Cochlea—The "Traveling
 Wave" 595
 Function of the Organ of Corti... 596
 Determination of Pitch—The
 "Place" Principle 597
 Determination of Loudness..... 597
 Central Auditory Mechanisms 598
 The Auditory Pathway..... 598
 Function of the Cerebral Cortex
 in Hearing 600
 Discrimination of Direction from
 which Sound Emanates 601
 Centrifugal Conduction of
 Impulses from the Central
 Nervous System..... 602
 Hearing Abnormalities..... 602
 Types of Deafness..... 602

Chapter 52
The Eye: I. Optics of Vision 604
 Physical Principles of Optics 604
 Refraction of Light 604
 Application of Refractive
 Principles to Lenses 604
 Focusing by Convex Lenses..... 605
 Formation of an Image by a
 Convex Lens 606
 Measurement of the Refractive
 Power of a Lens—the Diopter... 607
 The Optics of the Eye 607
 The Eye as a Camera 607
 The Mechanism of
 Accommodation..... 608
 The Pupillary Aperture 609
 "Normal" Aberrations of Vision... 610
 Errors of Refraction..... 610
 Size of the Image on the Retina
 and Visual Acuity 612
 Determination of Distance of an
 Object from the Eye—Depth
 Perception 613
 Optical Instruments..... 614
 The Ophthalmoscope 614
 The Retinoscope 614

Chapter 53
**The Eye: II. Receptor Functions
 of the Retina 616**
 Anatomy and Function of the Structural
 Elements of the Retina..... 616
 Photochemistry of Vision..... 617
 The Rhodopsin-Retinene Visual
 Cycle, and Excitation of the
 Rods..... 617
 Photochemistry of Color Vision
 by the Cones 617
 Automatic Regulation of Retinal
 Sensitivity—Dark and Light
 Adaptation 617
 Fusion of Flickering Lights by
 the Retina 621
 Color Vision 622
 The Tri-color Theory of Color
 Perception 622
 Color Blindness..... 624

Chapter 54
The Eye: III. Neurophysiology of Vision... 626
 The Visual Pathway 626
 Neural Function of the Retina 626

Neural Organization of the Retina	626	Excitation.....	649
Stimulation of the Rods and Cones—The Receptor Potential	627	The Golgi Tendon Organ and its Excitation	650
Stimulation of the Bipolar and Horizontal Cells.....	627	The Stretch Reflex	650
Stimulation of the Ganglion Cells	627	Control of Muscle Contraction by the Gamma Efferent Motor Fibers—A Servo Control System.....	651
Regulation of Retinal Function by Centrifugal Fibers from the Central Nervous System	629	Clinical Applications of the Stretch Reflex.....	653
Function of the Lateral Geniculate Body.....	629	The Tendon Reflex	654
Function of the Primary Visual Cortex...	629	The Flexor Reflex.....	655
Detection of Lines and Borders by the Primary Visual Cortex.....	630	The Crossed Extensor Reflex.....	656
Neural Analysis of Color.....	630	Reciprocal Innervation.....	657
Perception of Luminosity.....	631	Fatigue of Reflexes; Rebound ...	657
Transmission of Visual Information into Other Regions of the Cerebral Cortex	631	The Reflexes of Posture and Locomotion.....	657
The Fields of Vision; Perimetry.....	632	The Postural and Locomotive Reflexes of the Cord.....	657
Eye Movements and their Control.....	633	The Scratch Reflex	659
Fixation Movements of the Eyes	634	The Spinal Cord Reflexes that Cause Muscle Spasm.....	659
Fusion of the Visual Images	635	The Autonomic Reflexes in the Spinal Cord.....	660
Autonomic Control of Accommodation and Pupillary Aperture	636	Spinal Cord Transection and Spinal Shock	660
Control of Accommodation	636		
Control of the Pupillary Aperture	637		
Chapter 55			
The Chemical Senses—Taste and Smell...	639	Chapter 57	
The Sense of Taste	639	Motor Functions of the Brain Stem and Basal Ganglia—Reticular Formation, Vestibular Apparatus, Equilibrium, and Brain Stem Reflexes	
The Primary Sensations of Taste	639	662	
The Taste Bud and its Function	640	The Reticular Formation, and Support of the Body Against Gravity ...	662
Transmission of Taste Signals into the Central Nervous System.....	642	Excitatory and Inhibitory Regions of the Reticular Formation.....	662
Special Attributes of the Taste Sense.....	642	Support of the Body Against Gravity.....	663
The Sense of Smell	643	Vestibular Sensations and the Maintenance of Equilibrium ...	663
The Olfactory Membrane	643	The Vestibular Apparatus	663
Stimulation of the Olfactory Cells	644	Function of the Utricule in the Maintenance of Static Equilibrium.....	665
Transmission of Smell Sensations into the Central Nervous System.....	645	The Semicircular Canals and their Detection of Angular Acceleration	665
Chapter 56			
The Cord Reflexes	647	Nystagmus Caused by Stimulation of the Semicircular Canals	667
Organization of the Spinal Cord for Reflex Functions.....	647	Clinical Tests for Integrity of Vestibular Function	667
Muscle and Tendon Receptors	648	Other Factors Concerned with Equilibrium.....	668
The Muscle Spindle and its		Functions of the Reticular Formation	

and Specific Brain Stem Nuclei
in Controlling Subconscious,
Stereotyped Movements 669

Motor Functions of the Basal Ganglia... 670

Functions of the Different Basal
Ganglia..... 670

Clinical Syndromes Resulting
from Damage to the Basal
Ganglia..... 672

Functions of the Cerebral Cortex in
Posture and Locomotion—
Purposefulness of Locomotion 673

Summary of the Different Functions of
the Central Nervous System in
Posture and Locomotion..... 674

Function of the Cord and Brain
Stem Reflexes in Man 675

Chapter 58

**Cortical and Cerebellar Control of
Motor Functions..... 677**

Physiologic Anatomy of the Motor
Areas of the Cortex and their
Pathways to the Cord 677

Spatial Organization of the
Motor Cortex..... 678

Skilled Movements, and the
Concept of a “Premotor Area” 680

Motor Functions of the Somatic
Sensory Cortex 680

Effects of Ablating Portions of the
Motor Cortex..... 681

Effects of Pyramidal Transection 681

Function of the Internuncial System
of the Spinal Cord..... 682

Functions of the Internuncial
Cells in the Motor
Transmission System..... 682

Stimulation of the Anterior
Motoneuron and its Output
to the Periphery..... 682

Motor Functions of the Cerebellum..... 683

Function of the Cerebellum in
Voluntary Movements..... 684

Function of the Cerebellum in
Involuntary Movements 687

Function of the Cerebellum in
Equilibrium..... 687

Electrical Activity in the
Cerebellum..... 687

Clinical Abnormalities of the
Cerebellum..... 688

Sensory Feedback Control of Motor
Functions..... 689

The Sensory “Engram” for
Motor Movements..... 689

Establishment of “Skilled”
Motor Patterns in the Motor
Cortex 690

Effect of Different Muscular
Loads on the Performance of
Skilled Motor Activities 691

Chapter 59

**The Autonomic Nervous System;
and Vegetative Functions of the
Hypothalamus 692**

General Organization of the Autonomic
Nervous System 692

Physiologic Anatomy of the
Sympathetic Nervous System... 692

Physiologic Anatomy of the
Parasympathetic Nervous
System 693

Basic Characteristics of Sympathetic
and Parasympathetic Function 694

Cholinergic and Adrenergic
Fibers—Secretion of
Acetylcholine and
Norepinephrine by the
Postganglionic Neurons 694

Excitatory and Inhibitory Actions
of Sympathetic and
Parasympathetic Stimulation ... 695

Effects of Sympathetic and
Parasympathetic Stimulation
on Specific Organs 695

Function of the Adrenal
Medullae..... 697

Relationship of Stimulus Rate
to Degree of Sympathetic and
Parasympathetic Effect 698

Sympathetic and Parasympathetic
“Tone” 698

Denervation Hypersensitivity
of Sympathetic and
Parasympathetic Organs
Following Denervation 699

The Autonomic Reflexes 699

Mass Discharge of Sympathetic
Systems versus Discrete
Characteristics of
Parasympathetic Reflexes 700

“Alarm” or “Stress” Function
of the Sympathetic Nervous
System..... 700

Pharmacology of the Autonomic

Nervous System	701	Chapter 61	
Drugs that Act on Adrenergic Effector Organs—The Sympathomimetic Drugs	701	The Cerebral Cortex and Intellectual Functions of the Brain	716
Drugs that Act on Cholinergic Effector Organs	701	Physiologic Anatomy of the Cerebral Cortex	716
Drugs that Stimulate the Post-Ganglionic Neurons— “Nicotinic Drugs”	702	Functions of Certain Specific Cortical Areas	717
Medullary, Pontine, and Mesencephalic Control of the Autonomic Nervous System ...	702	Specific Functions of the Primary Sensory Areas	718
Vegetative Functions of the Hypothalamus	702	The Secondary Sensory Areas ...	718
		Interpretative Functions of the Angular Gyrus and Temporal Lobe Regions.....	719
		Thoughts, Memory, Learning, and Consciousness	721
		The Basis of Memory	721
		Function of the Corpus Callosum and Anterior Commissure to Transfer Memories to the Opposite Hemisphere	724
		Relationship of Conditioned Reflexes to Learning	724
		Intellectual Operations of the Brain ...	725
		Intellectual Aspects of Motor Control...	726
		Function of the Brain in Communication	727
		Chapter 62	
Chapter 60		Behavioral Functions of the Brain: The Limbic System, and Role of the Hypothalamus	729
The Reticular Activating System: Wakefulness, Sleep, Attention, Brain Waves, and Epilepsy	705	The Limbic System	729
Function of the Reticular Activating System in Wakefulness	705	Behavioral Functions of the Hypothalamus and Related Areas	729
The Arousal Reaction— Sensory Activation of the Reticular Activating System ...	706	Pleasure and Pain; Reward and Punishment	730
Cerebral Activation of the Reticular Activating System ...	707	The Affective-Defensive Pattern —Rage	731
The Feedback Theory of Wakefulness and Sleep	707	Function of the Hypothalamus in Sleep, Wakefulness, Alertness, and Excitement	731
Physiological Effects of Sleep.....	709	Psychosomatic Effects of the Hypothalamus and Reticular Activating System	731
Attention	709	Functions of Other Parts of the Limbic System	732
Coordination of Different Cortical Functions by the Reticular Activating System ...	710	Functions of the Amygdala	732
Possible “Scanning” and “Programming” Functions of the Reticular Activating System	710	Functions of the Hippocampus...	733
Effect of Barbiturate Anesthesia on the Reticular Activating System.....	711	Function of the Hippocampal, Cingulate, and Orbitofrontal Cortex	734
Brain Waves	711		
Origin of the Different Types of Brain Waves	712		
Effect of Varying Degrees of Cerebral Activity on the Basic Rhythm of the Electroencephalogram.....	713		
Clinical Use of the Electroencephalogram.....	713		
Epilepsy	713		
Generalized Epilepsy	713		
Partial Epilepsy	715		

PART IX

THE GASTROINTESTINAL TRACT

Chapter 63 ✓		Secretion of Saliva	755
Movement of Food Through the Alimentary Tract	738	Esophageal Secretion	756
General Principles of Gastrointestinal Motility	738	Gastric Secretion	756
Characteristics of the Intestinal Wall	738	Characteristics of the Gastric Secretions	756
Innervation of the Gut—The Intramural Plexus	739	Regulation of Gastric Secretion by Nervous and Hormonal Mechanisms	758
Functional Types of Movements in the Gastrointestinal Tract	740	Pancreatic Secretion	760
The Mixing Movements	740	Regulation of Pancreatic Secretion	760
The Propulsive Movements—Peristalsis	741	Secretion of Bile by the Liver	762
Ingestion of Food	741	Secretions of the Small Intestine	762
Mastication (Chewing)	742	Secretion of Mucus by Brunner's Glands and by Mucous Cells of the Intestinal Surface	762
Swallowing (Deglutition)	742	Secretion of the Intestinal Digestive Juices—The Crypts of Lieberkühn	762
Function of the Gastroesophageal Constrictor	744	Regulation of Small Intestinal Secretion	763
Motor Functions of the Stomach	744	Secretions of the Large Intestine	763
Storage Function of the Stomach	745		
Mixing in the Stomach	745	Chapter 65 ✓	
Emptying of the Stomach	746	Digestion and Absorption in the Gastrointestinal Tract	765
Movements of the Small Intestine	747	Digestion of the Various Foods.....	765
Mixing Contractions (Segmentation Contractions) ...	747	Digestion of Carbohydrates	765
Propulsive Movements	748	Digestion of Fats	766
Contraction and Emptying of the Gallbladder—Cholecystokinin	749	Digestion of Proteins	767
Function of the Ileocecal Valve ...	749	Basic Principles of Gastrointestinal Absorption	769
Defecation	751	Anatomical Basis of Absorption ...	769
Other Automatic Reflexes Affecting Bowel Activity	751	Basic Mechanisms of Absorption	769
		Absorption in the Small Intestine	770
		Absorption of Nutrients	770
		Absorption of Water and Electrolytes	772
		Absorption in the Large Intestine; Formation of the Feces	773
		Chapter 66 ✓	
Chapter 64 ✓		Gastrointestinal Disorders	775
Secretory Functions of the Alimentary Tract	753	Disorders of Swallowing and of the Esophagus	775
General Principles of Gastrointestinal Secretion	753	Disorders of the Stomach	775
Anatomical Types of Glands	753	Peptic Ulcer	776
Basic Mechanisms of Stimulation of the Gastrointestinal Glands	753	Disorders of the Small Intestine	778
Basic Mechanism of Secretion by Glandular Cells	754		
Lubricating and Protective Properties of Mucus and its Importance in the Gastrointestinal Tract	755		

Disorders of the Large Intestine	779	Gastrointestinal Tract	780
Constipation	779	Vomiting	780
Diarrhea	779	Nausea	781
Paralysis of Defecation in Spinal Cord Injuries	780	Gastrointestinal Obstruction	781
General Disorders of the		Gases in the Gastrointestinal Tract (Flatus)	782

PART X

METABOLISM AND TEMPERATURE REGULATION

Chapter 67 ✓

Metabolism of Carbohydrates and Formation of Adenosine Triphosphate ...	786
Release of Energy from Foods and the Concept of "Free Energy"	786
Role of Adenosine Triphosphate (ATP) in Metabolism	787
Transport of Monosaccharides Through the Cell Membrane ...	787
Facilitation of Glucose Transport by Insulin	788
Phosphorylation of the Monosaccharides	788
Storage of Glycogen in Liver and Muscle	788
Glycogenesis	789
Glycogenolysis	790
Release of Energy from the Glucose Molecule by the Glycolytic Pathway	790
Glycolysis and the Formation of Pyruvic Acid	790
Conversion of Pyruvic Acid to Acetyl Coenzyme A	791
The Citric Acid Cycle	792
Oxidation of Hydrogen Atoms by the Oxidative Enzymes	793
Summary of ATP Formation During the Breakdown of Glucose	794
Control of Glycolysis and Oxidation by Adenosine Diphosphate (ADP)	795
Glucose Conversion to Glycogen or Fat	795
Anaerobic Release of Energy – "Anaerobic Glycolysis"	795
Release of Energy from Glucose by the Phosphogluconate Pathway ...	796
Formation of Carbohydrates from Proteins and Fats – "Gluconeogenesis"	797
Blood Glucose	797

Chapter 68 ✓

Lipid Metabolism	799
Transport of Lipids in the Blood	799
Transport from the Gastrointestinal Tract – The "Chylomicrons"	799
Transport of Fatty Acids in Combination with Albumin – "Free Fatty Acid"	800
The Lipoproteins	801
The Fat Deposits	801
Adipose Tissue	801
The Liver Lipids	802
Use of Triglycerides for Energy, and Formation of Adenosine Triphosphate (ATP)	802
Formation of Acetoacetic Acid in the Liver and its Transport in the Blood	804
Synthesis of Triglycerides from Carbohydrates	804
Synthesis of Triglycerides from Proteins	806
Regulation of Energy Release from Triglycerides	806
Obesity	807
Phospholipids and Cholesterol	808
Phospholipids	808
Cholesterol	808
Structural Functions of Phospholipids and Cholesterol	809
Atherosclerosis	810
Experimental Production of Atherosclerosis in Animals	810
Atherosclerosis in the Human Being	810
Summary of Factors Causing Atherosclerosis	811

Chapter 69 ✓

Protein Metabolism	812
Basic Properties of Proteins	812

The Amino Acids.....	812	Mechanisms of Heat	
Physical Characteristics of Proteins	812	Conservation and Increased	
Globular Proteins	812	Heat Production when the	
Fibrous Proteins	814	Body Becomes Cooled	838
Conjugated Proteins	814	Effect of the Skin Cold and	
Transport and Storage of Amino Acids	814	Warmth Receptors on Body	
The Blood Amino Acids	814	Temperature Regulation	839
Storage of Amino Acids as		Abnormalities of Body Temperature	
Proteins in the Cells	815	Regulation	840
The Plasma Proteins	816	Fever	840
Chemistry of Protein Synthesis	816	Exposure of the Body to	
Use of Proteins for Energy	817	Extreme Cold	842
Obligatory Degradation of			
Proteins	818		
Hormonal Regulation of Protein		Chapter 72 ✓	
Metabolism	819	Dietary Balances, Regulation of	
		Feeding, Obesity, and Starvation	844
		Dietary Balances	844
Chapter 70 ✓		Energy Available in Foods	844
Energetics and Metabolic Rate	821	Average Composition of the Diet	844
Importance of Adenosine Triphosphate		Study of Energy Balances	845
(ATP) in Metabolism	821	Regulation of Food Intake	847
Creatine Phosphate as a Storage		Neural Centers for Regulation	
Depot for Energy	822	of Food Intake	847
Anaerobic versus Aerobic Energy	822	Factors that Regulate Food	
Summary of Energy Utilization		Intake	848
by the Cells	824	Obesity	849
Control of Energy Release in the Cell... ..	824	Abnormal Feeding Regulation	
The Metabolic Rate	825	as a Pathologic Cause of	
Measurement of the Metabolic		Obesity	850
Rate	826	Treatment of Obesity	850
Factors that Affect the Metabolic		Inanition	850
Rate	827	Starvation	851
The Basal Metabolic Rate	828		
		Chapter 73 ✓	
Chapter 71 ✓		Vitamin and Mineral Metabolism	852
Body Temperature, Temperature		Vitamins	852
Regulation, and Fever	831	Vitamin A	852
Balance Between Heat Production and		Thiamine (Vitamin B ₁)	853
Heat Loss	832	Niacin	854
Heat Loss	832	Riboflavin (Vitamin B ₂)	854
Sweating and its Regulation by		Vitamin B ₁₂	855
the Autonomic Nervous System	834	Folic Acid (Pteroylglutamic Acid)	855
The Insulator System of the Body	836	Pyridoxine (Vitamin B ₆)	855
Flow of Blood to the Skin—The		Pantothenic Acid	855
“Radiator” System of the Body	836	Biotin	856
Regulation of Body Temperature—		Inositol	856
Function of the Hypothalamus	837	Choline	856
Thermostatic Center in the		Ascorbic Acid (Vitamin C)	856
Anterior Hypothalamus	837	Vitamin D	857
Mechanisms of Increased Heat		Vitamin E	857
Loss when the Body Becomes		Vitamin K	858
Overheated	838	Mineral Metabolism	858

Chapter 74 ✓			
The Liver and Biliary System	861	The Bile Salts and their Function	863
Physiologic Anatomy of the Liver	861	Excretion of Bilirubin in the Bile	864
Function of the Hepatic Vascular		Secretion of Cholesterol;	
System	861	Gallstone Formation	866
Secretion of Bile and Functions of the		Metabolic Functions of the Liver	867
Biliary Tree	862	Carbohydrate Metabolism	867
Physiologic Anatomy of Biliary		Fat Metabolism	867
Secretion	862	Protein Metabolism	867
		Miscellaneous Metabolic Functions of	
		the Liver	868

PART XI

ENDOCRINOLOGY AND REPRODUCTION

Chapter 75 ✓		Chapter 76	
Introduction to Endocrinology, and Hypophyseal Hormones, and the Pineal Gland	872	The Adrenocortical Hormones	886
Nature of a Hormone	872	Functions of the Mineralo-Corticoids—	
Intracellular Hormonal		Aldosterone	886
Mediators—Cyclic AMP	873	Renal Effects of Aldosterone	887
The Hypophysis and its Relationship		Effects of Aldosterone on Fluid	
to the Hypothalamus	874	Volumes and Cardiovascular	
Control of Hypophyseal Secretion		Dynamics	888
by the Hypothalamus	874	Effects of Aldosterone on Sweat	
The Adenohypophysis and its		Glands, Salivary Glands, and	
Regulation by Hypothalamic		Intestinal Glands	889
Neurosecretory Substances ...	875	Mechanism of Action of	
Cell Types of the		Aldosterone	889
Adenohypophysis	875	Regulation of Aldosterone	
The Hypothalamic-Hypophyseal		Secretion	889
Portal System	875	Functions of the Glucocorticoids	890
Physiologic Functions of the Adeno-		Effect of Cortisol on	
hypophyseal Hormones	876	Carbohydrate Metabolism	890
Growth Hormone	877	Effects of Cortisol on Protein	
Abnormalities of Growth		Metabolism	891
Hormone Secretion	879	Effects of Cortisol on Fat	
Chemistry of the Adeno-		Metabolism	892
hypophyseal Hormones	880	Regulation of Cortisol Secretion	
Melanocyte-Stimulating		—Corticotropin (ACTH)	892
Hormone	880	Chemistry of Adrenocortical Secretion	895
The Neurohypophysis and its Relation		The Adrenal Androgens	896
to the Hypothalamus	881	Abnormalities of Adrenocortical	
Physiologic Functions of		Secretion	897
Antidiuretic Hormone		Hypoadrenalism — Addison's	
(Vasopressin)	882	Disease	897
Oxytocic Hormone	883	Hyperadrenalism — Cushing's	
Chemical Nature of Antidiuretic		Disease	898
Hormone (ADH) and Oxytocin	884	Hypersecretion of Individual	
The Pineal Gland	884	Hormones	899

Chapter 77		Pathologic Physiology of Diabetes	923
The Thyroid Hormones	902	Diagnosis of Diabetes	924
Formation and Secretion of the		Treatment of Diabetes	925
Thyroid Hormone	902	Diabetic Coma	926
Requirements of Iodine for		Hyperinsulinism	926
Formation of Thyroxine	902	Functions of Glucagon	927
The Iodide Pump (Iodide			
Trapping)	902	Chapter 79	
Chemistry of Thyroxine and		Parathyroid Hormone, Calcitonin,	
Triiodothyronine Formation ...	903	Calcium and Phosphate Metabolism,	
Release of Thyroxine from the		Vitamin D, Bone and Teeth	929
Follicles	903	Calcium and Phosphate in the	
Transport of Thyroxine and		Extracellular Fluid and Plasma	929
Triiodothyronine to the Tissues	904	Gastrointestinal Absorption of	
Functions of Thyroxine in the Tissues ...	904	Calcium and Phosphate	929
General Increase in Metabolic		Excretion of Calcium and	
Rate	904	Phosphate	930
Effects of Thyroxine on		The Calcium in the Plasma and	
Metabolism of Specific		Interstitial Fluid	930
Dietary Substances	905	The Inorganic Phosphate in the	
Physiologic Effects of Thyroxine		Extracellular Fluids	931
on Different Bodily		Effects of Altered Calcium and	
Mechanisms	906	Phosphate Concentrations in	
Regulation of Thyroid Secretion	907	the Body Fluids	931
Antithyroid Substances	909	Bone and its Relationships with	
Interrelationships of the Thyroid		Extracellular Calcium and	
Gland and Other Endocrine		Phosphates	932
Glands	910	Precipitation and Absorption of	
Diseases of the Thyroid	910	Calcium and Phosphate in	
Hyperthyroidism	910	Bone – Equilibrium with the	
Hypothyroidism	912	Extracellular Fluids	932
		Exchangeable Calcium	933
Chapter 78		Deposition and Absorption of	
Insulin, Glucagon, and Diabetes Mellitus	915	Bone	934
Effect of Insulin on Carbohydrate		Parathyroid Hormone	935
Metabolism	915	Effect of Parathyroid Hormone	
Facilitation of Glucose Transport		on Calcium and Phosphate	
Through the Cell Membrane ...	915	Concentrations in the	
Effect of Insulin on Glucose		Extracellular Fluid	936
Utilization and Glycogen		Regulation of Extracellular	
Storage in Extrahepatic Tissues	917	Calcium Ion Concentration	
Action of Insulin on		by the Parathyroid Glands	937
Carbohydrate Metabolism in		Calcitonin	938
the Liver	917	Physiology of Parathyroid and Bone	
Regulation of Blood Glucose		Diseases	939
Concentration and Control of		Hypoparathyroidism	939
Insulin Secretion	918	Hyperparathyroidism	939
Other Metabolic Effects of Insulin	920	Rickets	940
Effects on Fat Metabolism	920	Osteoporosis	941
Effect of Insulin on Protein		Physiology of the Teeth	941
Metabolism and on Growth ...	921	Function of the Different	
Relation of Other Endocrine Glands		Parts of the Teeth	942
to Insulin Secretion	922	Dentition	942
Diabetes Mellitus	923	Mineral Exchange in Teeth	943
		Dental Abnormalities	943

Chapter 80 /			
Reproductive Functions of the Male, and the Male Sex Hormones	945		
Spermatogenesis	945		
The Steps of Spermatogenesis ...	945		
The Sperm	947		
Function of the Seminal Vesicles	947		
Function of the Prostate Gland ...	947		
Semen and the Phenomenon of Capacitation	948		
Male Fertility	948		
The Male Sexual Act	949		
Neuronal Stimulus for Performance of the Male Sexual Act	949		
Stages of the Male Sexual Act ...	950		
Testosterone and Other Male Sex Hormones	950		
Secretion, Metabolism, and Chemistry of the Male Sex Hormone	950		
Functions of Testosterone	951		
Basic Mechanism of Action of Testosterone	953		
Control of Male Sexual Functions by the Gonadotropic Hormones – FSH, LH, and LTH	954		
Abnormalities of Male Sexual Function	956		
The Prostate Gland and its Abnormalities	956		
Hypogonadism in the Male	956		
Testicular Tumors and Hypergonadism in the Male ...	957		
Chapter 81 /			
Sexual Functions in the Female, and the Female Sex Hormones	958		
Physiologic Anatomy of the Female Sexual Organs	958		
The Monthly Ovarian Cycle and Function of the Gonadotropic Hormones	958		
Follicular Growth—Function of Follicle-Stimulating Hormone (FSH)	959		
Ovulation	960		
The Corpus Luteum	960		
Summary	961		
Female Sex Hormones	961		
Chemistry of the Sex Hormones	961		
Functions of the Estrogens—Effects on the Primary and Secondary Sexual Characteristics	963		
Functions of Progesterone	964		
Regulation of the Female Rhythm—Interplay Between the Ovarian Hormones and the Pituitary Gonadotropic Hormones	965		
Effect of the Ovarian Hormones on Pituitary Secretion of Gonadotropic Hormones	965		
Feedback Oscillation of the Hypothalamic-Pituitary-Ovarian System	966		
Puberty	967		
The Menopause	967		
The Endometrial Cycle and Menstruation	968		
Interrelationships of the Ovaries with Other Glands	969		
Abnormalities of Secretion by the Ovaries	970		
The Female Sexual Act	971		
Female Fertility	972		
Chapter 82 /			
Pregnancy and Lactation	974		
Maturation of the Ovum and Oogenesis	974		
Fertilization of the Ovum	974		
Transport and Implantation of the Developing Ovum	975		
Early Intra-uterine Nutrition of the Embryo	976		
Function of the Placenta	976		
Developmental and Physiologic Anatomy of the Placenta	976		
Permeability of the Placental Membrane	977		
Storage Function of the Placenta	979		
Hormonal Factors in Pregnancy	979		
Chorionic Gonadotropin and its Effect To Cause Persistence of the Corpus Luteum and To Prevent Menstruation	979		
Human Placental Lactogen	980		
Secretion of Estrogens by the Placenta	980		
Secretion of Progesterone by the Placenta	981		
Other Hormonal Factors in Pregnancy	981		
Response of the Mother to Pregnancy ...	981		
Changes in the Maternal Circulatory System During Pregnancy	982		
Weight Gain in the Mother	982		

Metabolism in the Mother During Pregnancy	982	Milk and the Metabolic Drain on the Mother Caused by Lactation	989
Respiration in the Mother During Pregnancy	983		
Function of the Maternal Urinary System During Pregnancy	983	Chapter 83	
The Amniotic Fluid and its Formation	983	Special Features of Fetal and Neonatal Physiology	991
Abnormal Responses of the Mother to Pregnancy	984	Growth and Functional Development of the Fetus	991
Hyperemesis Gravidarum	984	Development of the Organ Systems	991
Toxemia of Pregnancy	984	Function of the Nervous System	992
Parturition	984	Function of the Gastrointestinal Tract	992
Increased Uterine Irritability Near Term	984	Function of the Kidneys	992
Onset of Labor—A Positive Feedback Theory for its Initiation	985	Metabolism in the Fetus	992
Abdominal Contraction During Labor	986	Adjustments of the Infant to Extra-uterine Life	993
Mechanics of Parturition	986	Onset of Breathing	993
Separation and Delivery of the Placenta	987	Circulatory Readjustments at Birth	994
Labor Pains	987	Nutrition of the Newborn Infant	996
Involution of the Uterus	987	Special Functional Problems in the Neonatal Infant	996
Lactation	987	Special Problems of Prematurity	999
Development of the Breasts	987	Immature Development	1000
Initiation of Lactation— Prolactin	988	Instability of the Control Systems in the Premature Infant	1000
The Ejection or “Let-down” Process in Milk Secretion— Function of Oxytocin	988	Danger of Oxygen Therapy in the Premature Infant	1000
Continued Secretion of Milk for Many Months Following Pregnancy	989	Growth and Development of the Child	1000
Effect of Lactation on the Uterus and on the Sexual Cycle	989	Behavioral Growth	1001
		Index	1003
