II BLOOD CELLS, IMMUNITY, AND BLOOD CLOTTING

41

<p>4 RED BLOOD CELLS, ANEMIA, AND POLYCYTHEMIA..... 42</p> <p>The Red Blood Cells..... 42</p> <p> Production of Red Blood Cells..... 42</p>	<p>Formation of Hemoglobin..... 46</p> <p>Iron Metabolism 46</p> <p>Destruction of Red Blood Cells..... 48</p> <p>The Anemias 48</p>
--	--

Effects of Anemia on the Circulatory System	49	O-A-B Blood Groups.....	70
Polycythemia.....	49	The A and B Antigens—Called	
Effect of Polycythemia on the Circulatory System.....	49	“Agglutinogens”	70
5 RESISTANCE OF THE BODY TO INFECTION—THE LEUKOCYTES, THE MACROPHAGE SYSTEM, AND INFLAMMATION.....	51	The Agglutinins	71
The Leukocytes (White Blood Cells).....	51	The Agglutination Process in Transfusion Reactions.....	71
General Characteristics of Leukocytes ..	51	Blood Typing	72
Genesis of the Leukocytes	52	The Rh Blood Types.....	72
Life Span of the White Blood Cells.....	52	The Rh Immune Response.....	72
Properties of Neutrophils, Monocytes, and Macrophages	53	Other Blood Factors.....	73
The Tissue Macrophage System (The Reticuloendothelial System).....	54	Transfusion.....	73
Inflammation and Function of Neutrophils and Macrophages	56	Transfusion Reactions Resulting from Mismatched Blood Groups.....	73
The Process of Inflammation	56	Transplantation of Tissues and Organs.....	74
Neutrophilia Caused by Conditions Other Than Inflammation	57	Attempts to Overcome the Antigen-Antibody Reactions in Transplanted Tissue	74
The Eosinophils.....	57	8 HEMOSTASIS AND BLOOD COAGULATION.....	76
The Basophils.....	58	Events in Hemostasis	76
Agranulocytosis.....	58	Vascular Spasm.....	76
The Leukemias	58	Formation of the Platelet Plug.....	76
Effects of Leukemia on the Body	59	Blood Coagulation in the Ruptured Vessel	77
6 IMMUNITY AND ALLERGY.....	60	Fibrous Organization or Dissolution of the Blood Clot.....	77
Innate Immunity	60	Mechanism of Blood Coagulation.....	77
Acquired Immunity	60	Conversion of Prothrombin to Thrombin.....	78
Two Basic Types of Acquired Immunity	60	Conversion of Fibrinogen to Fibrin—Formation of the Clot	78
Antigens.....	60	The Vicious Circle of Clot Formation ...	79
Role of Lymphoid Tissue in Acquired Immunity	61	Block of Clot Growth by Blood Flow	79
Preprocessing of the T and B Lymphocytes	61	Initiation of Coagulation: Formation of Prothrombin Activator.....	79
Specificity of Antibodies and T Lymphocytes—Role of Lymphocyte Clones.....	62	Prevention of Blood Clotting in the Normal Vascular System—The Intravascular Anticoagulants	82
Origin of the Many Clones of Lymphocytes	62	Lysis of Blood Clots—Plasmin	82
Specific Attributes of the B Lymphocyte System—Humoral Immunity and the Antibodies	63	Conditions That Cause Excessive Bleeding in Human Beings	83
Special Attributes of the T Lymphocyte System—Activated Cells and “Cell-Mediated Immunity”	65	Decreased Prothrombin, Factor VII, Factor IX, and Factor X Caused by Vitamin K Deficiency	83
Vaccination.....	67	Hemophilia	83
Passive Immunity	67	Thrombocytopenia	83
Allergy.....	67	Thromboembolic Conditions in the Human Being.....	84
An Allergy That Occurs in Normal People: Delayed-Reaction Allergy	68	Femoral Thrombosis and Massive Pulmonary Embolism	84
Allergies in the “Allergic” Person	68	Disseminated Intravascular Clotting ...	84
7 BLOOD GROUPS; TRANSFUSION; TISSUE AND ORGAN TRANSPLANTATION.....	70	Anticoagulants for Clinical Use	85
Antigenicity and Immune Reactions of Blood	70	Heparin as an Intravenous Anticoagulant.....	85
		Coumarins as Anticoagulants.....	85
		Prevention of Blood Coagulation Outside the Body	85
		Blood Coagulation Tests	85
		Bleeding Time	85
		Clotting Time	85
		Prothrombin Time.....	86

III MEMBRANE PHYSIOLOGY, NERVE, AND MUSCLE

87

9	TRANSPORT THROUGH THE CELL		Physiologic Anatomy of Skeletal Muscle ..	120
	MEMBRANE.....	88	The Skeletal Muscle Fiber	120
	Diffusion.....	89	Molecular Mechanism of Muscle	
	Diffusion Through the Cell Membrane.	89	Contraction	122
	Net Diffusion Through the Protein		Molecular Characteristics of the	
	Channels of the Cell Membrane and		Contractile Filaments	123
	Factors That Affect It.....	93	Degree of Actin and Myosin Filament	
	Osmosis Across Selectively Permeable		Overlap—Effect on Tension	
	Membranes—Net Diffusion of Water...	94	Developed by the Contracting	
	Active Transport.....	97	Muscle	125
	Basic Mechanism of Active Transport..	97	Relation of Velocity of Contraction to	
	Secondary Active Transport: Sodium		Load	126
	“Cotransport” of Glucose and Amino		Initiation of Muscle Contraction:	
	Acids	99	Excitation-Contraction Coupling	126
	Active Transport Through Cellular		The Muscle Action Potential.....	127
	Sheets.....	99	Release of Calcium Ions by the	
10	MEMBRANE POTENTIALS AND		Sarcoplasmic Reticulum.....	127
	ACTION POTENTIALS	101	The Source of Energy for Muscle	
	Basic Physics of Membrane Potentials	101	Contraction	129
	Membrane Potentials Caused by		Characteristics of a Single Muscle	
	Diffusion	101	Twitch	130
	Membrane Potentials Caused by		Mechanics of Skeletal Muscle	
	Active Transport—The Sodium-		Contraction	131
	Potassium “Electrogenic Pump”.....	103	The Motor Unit.....	131
	Measuring the Membrane Potential ..	103	Summation of Muscle Contraction ...	131
	The Cell Membrane as an Electrical		Skeletal Muscle Tone.....	132
	Capacitor	104	Muscle Fatigue	133
	The Resting Membrane Potential of		The Lever Systems of the Body.....	133
	Nerves.....	104	Special Features and Abnormalities of	
	Origin of the Normal Resting		Skeletal Muscle Function	133
	Membrane Potential	105	Muscle Hypertrophy	133
	The Nerve Action Potential.....	106	Muscle Atrophy.....	134
	The Voltage-Gated Sodium and		Prevention of Muscle Atrophy by	
	Potassium Channels	106	Electrical Stimulation	134
	Summary of the Events That Cause		Physical Contracture of Muscle	
	the Action Potential	108	Following Denervation	134
	Roles of Other Ions During the		Rigor Mortis	134
	Action Potential	109	Familial Periodic Paralysis	134
	Initiation of the Action Potential.....	110	The Electromyogram.....	134
	Propagation of the Action Potential	110	12 NEUROMUSCULAR TRANSMISSION;	
	“Recharging” the Fiber Membrane After		FUNCTION OF SMOOTH MUSCLE.....	136
	Action Potentials—Importance of Energy		Transmission of Impulses from Nerves to	
	Metabolism.....	111	Skeletal Muscle Fibers: The	
	The Spike Potential and the After-		Neuromuscular Junction	136
	Potentials	112	Myasthenia Gravis.....	139
	Plateau in Some Action Potentials.....	113	Contraction of Smooth Muscle	139
	Rhythmicity of Certain Excitable		Types of Smooth Muscle.....	139
	Tissues—Repetitive Discharge.....	113	The Contractile Process in Smooth	
	Special Aspects of Signal Transmission in		Muscle	140
	Nerve Trunks.....	114	Membrane Potentials and Action	
	Velocity of Conduction in Nerve		Potentials in Smooth Muscle.....	141
	Fibers.....	115	Excitation-Contraction Coupling—	
	Excitation—The Process of Eliciting the		Role of Calcium Ions	143
	Action Potential	115	Neuromuscular Junctions of Smooth	
	Inhibition of Excitability—		Muscle	144
	“Stabilizers” and Local Anesthetics...	117	Smooth Muscle Contraction Without	
	Recording Membrane Potentials and		Action Potentials—Effect of Local	
	Action Potentials	117	Tissue Factors and Hormones	145
11	CONTRACTION OF SKELETAL		Mechanical Characteristics of Smooth	
	MUSCLE	120	Muscle Contraction	146

IV THE HEART

<p>13 HEART MUSCLE; THE HEART AS A PUMP 150</p> <p> Physiology of Cardiac Muscle..... 150</p> <p> Physiologic Anatomy of Cardiac Muscle 150</p> <p> Action Potentials in Cardiac Muscle.. 151</p> <p> Contraction of Cardiac Muscle..... 152</p> <p> The Cardiac Cycle..... 153</p> <p> Systole and Diastole 153</p> <p> Relationship of the Electrocardiogram to the Cardiac Cycle 154</p> <p> Function of the Ventricles as Pumps 155</p> <p> Function of the Valves 155</p> <p> The Aortic Pressure Curve..... 156</p> <p> Relationship of the Heart Sounds to Heart Pumping 156</p> <p> Work Output of the Heart 157</p> <p> Energy for Cardiac Contraction 157</p> <p> Regulation of Cardiac Function 157</p> <p> Intrinsic Regulation of Cardiac Pumping—The Frank-Starling Law of the Heart..... 157</p> <p> Control of the Heart by Parasympathetic and Sympathetic Nerves 160</p> <p> Effect of Heart Debility on Cardiac Function—The Hypoeffective Heart .. 161</p> <p> Effect of Chronic Increase in Heart Work Load—The Hypereffective Heart 161</p> <p> Effect of Various Ions on Heart Function..... 161</p> <p> Effect of Temperature on the Heart... 162</p> <p> The Heart-Lung Preparation 162</p> <p> Assessment of Contractility..... 163</p> <p>14 RHYTHMIC EXCITATION OF THE HEART..... 165</p> <p> The Special Excitatory and Conductive System of the Heart..... 165</p> <p> The Sinoatrial Node 165</p> <p> Internodal Pathways and Transmission of the Cardiac Impulse Through the Atria 167</p> <p> The Atrioventricular (A-V) Node and the Purkinje System 167</p> <p> Transmission in the Purkinje System..... 168</p> <p> Transmission of the Cardiac Impulse in the Ventricular Muscle..... 168</p> <p> Summary of the Spread of the Cardiac Impulse Through the Heart.. 169</p> <p> Control of Excitation and Conduction in the Heart..... 169</p> <p> The S-A Node as the Pacemaker of the Heart..... 169</p> <p> Role of the Purkinje System in Causing Synchronous Contraction of the Ventricular Muscle..... 170</p>	<p> Control of Heart Rhythmicity and Conduction by the Autonomic Nerves 170</p> <p> Abnormal Rhythms of the Heart..... 171</p> <p> Heart Block 171</p> <p> The Phenomenon of “Re-Entry” and Abnormal Rhythms 172</p> <p> Premature Contraction—Ectopic Foci 175</p> <p> Cardiac Tachycardias..... 175</p> <p> Cardiac Arrest..... 175</p> <p>15 THE NORMAL ELECTROCARDIOGRAM 177</p> <p> Characteristics of the Normal Electrocardiogram..... 177</p> <p> Depolarization Waves Versus Repolarization Waves..... 177</p> <p> Relationship of Atrial and Ventricular Contraction to the Waves of the Electrocardiogram 178</p> <p> Voltage and Time Calibration of the Electrocardiogram..... 178</p> <p> Methods for Recording Electrocardiograms..... 179</p> <p> The Pen Recorder 179</p> <p> Recording Electrocardiograms with the Oscilloscope..... 179</p> <p> Flow of Current Around the Heart During the Cardiac Cycle 179</p> <p> Recording Electrical Potentials from a Partially Depolarized Mass of Syncytial Cardiac Muscle 179</p> <p> Flow of Electrical Currents Around the Heart in the Chest 180</p> <p> Electrocardiographic Leads 180</p> <p> The Three Bipolar Limb Leads 180</p> <p> Chest Leads (Precordial Leads)..... 181</p> <p> Augmented Unipolar Limb Leads... 182</p> <p>16 ELECTROCARDIOGRAPHIC INTERPRETATION IN CARDIAC MUSCLE ABNORMALITIES—VECTORIAL ANALYSIS 183</p> <p> Principles of Vectorial Analysis of Electrocardiograms..... 183</p> <p> Use of Vectors to Represent Electrical Potentials 183</p> <p> Denoting the Direction of a Vector in Terms of Degrees..... 184</p> <p> “Axis” of Each of the Bipolar and Unipolar Limb Leads 184</p> <p> Vectorial Analysis of Potentials Recorded in Different Leads 184</p> <p> Vectorial Analysis of the Normal Electrocardiogram..... 185</p> <p> Vectors Occurring During Depolarization of the Ventricles—the QRS Complex 185</p>
--	---

The Electrocardiogram During Repolarization—The T Wave 187
 Depolarization of the Atria—The P Wave..... 187
 The Vectorcardiogram 188
 The Mean Electrical Axis of the Ventricle 188
 Determining the Electrical Axis from Standard Lead Electrocardiograms ... 188
 Abnormal Ventricular Conditions That Cause Axis Deviation 189
 Conditions that Cause Abnormal Voltages of the QRS Complex 191
 Increased Voltage in the Standard Bipolar Limb Leads 191
 Decreased Voltage of the Electrocardiogram..... 191
 Prolonged and Bizarre Patterns of the QRS Complex 191
 Prolonged QRS Complex as a Result of Cardiac Hypertrophy or Dilatation 191
 Prolonged QRS Complex Resulting from Purkinje System Blocks 192
 Conditions Causing Bizarre QRS Complexes..... 192
 Current of Injury 192
 Effect of Current of Injury on the QRS Complex..... 192
 The J Point—The Zero Reference Potential of the Electrocardiogram.... 193
 Coronary Ischemia as a Cause of Current of Injury 194
 Abnormalities in the T Wave..... 195

Effect of Slow Conduction of the Depolarization Wave on the T Wave..... 195
 Prolonged Depolarization in Portions of the Ventricular Muscle as a Cause of Abnormalities in the T Wave..... 196

17 ELECTROCARDIOGRAPHIC INTERPRETATION OF CARDIAC ARRHYTHMIAS 197
 Abnormal Sinus Rhythms..... 197
 Tachycardia..... 197
 Bradycardia..... 197
 Sinus Arrhythmia..... 197
 Abnormal Rhythms Resulting from Impulse Conduction Block 198
 Sinoatrial Block 198
 Atrioventricular Block..... 198
 Incomplete Intraventricular Block—Electrical Alternans 199
 Premature Contractions 199
 Premature Atrial Contractions 200
 A-V Nodal or A-V Bundle Premature Contractions 200
 Premature Ventricular Contractions (PVCs)..... 200
 Paroxysmal Tachycardia 201
 Atrial Paroxysmal Tachycardia 201
 Ventricular Paroxysmal Tachycardia 202
 Flutter and Fibrillation 202
 Atrial Flutter..... 202
 Atrial Fibrillation..... 202
 Ventricular Fibrillation 203

V THE CIRCULATION

18 PHYSICS OF BLOOD, BLOOD FLOW, AND PRESSURE: HEMODYNAMICS 206
 The Circulatory System as a "Circuit"..... 206
 The Physical Characteristics of Blood 206
 The Hematocrit..... 206
 Plasma..... 208
 Interrelationships Among Pressure, Flow, and Resistance..... 208
 Blood Flow 208
 Blood Pressure..... 210
 Resistance of Blood Flow 211
 Vascular Distensibility 214
 Vascular Compliance (Or Capacitance) 214
 Volume-Pressure Curves of the Arterial and Venous Circulations 214
 "Mean Circulatory Filling Pressure" and Volume-Pressure Curves of the Entire Circulatory System..... 215
 The Mean Circulatory Filling Pressure 215

Volume-Pressure Curves of the Entire Circulation..... 215
 Delayed Compliance (Stress-Relaxation) of Vessels..... 216
 19 THE SYSTEMIC CIRCULATION..... 218
 Physical Characteristics of the Systemic Circulation..... 218
 Function of the Large Arteries 220
 The Small Arteries, Arterioles, and Capillaries 220
 Exchange of Fluid and Nutrients Through the Capillary Membrane 220
 The Veins and Their Functions 221
 Venous Pressures—Right Atrial Pressure (Central Venous Pressure) and Peripheral Pressures..... 221
 Blood Reservoir Function of the Veins 224
 Pressure Pulses in the Arteries 225
 Factors That Affect the Pulse Pressure 225

Abnormal Pressure Pulse Contours ...	226	Hormonal Mechanisms for Rapid Control of Arterial Pressure	253
Transmission of the Pressure Pulse to the Periphery	227	The Norepinephrine-Epinephrine Vasoconstrictor Mechanism	253
The Radial Pulse	228	Role of Vasopressin in Rapid Control of Arterial Pressure	253
Pressure Pulses in the Veins	228	The Renin-Angiotensin Vasoconstriction Mechanism for Control of Arterial Pressure	254
20 LOCAL CONTROL OF BLOOD FLOW BY THE TISSUES, AND NERVOUS AND HUMORAL REGULATION	230	Two Intrinsic Circulatory Mechanisms for Rapid Arterial Pressure Regulation	255
Local Control of Blood Flow in Response to Tissue Need	230	22 ARTERIAL PRESSURE REGULATION: II. LONG-TERM CONTROL BY THE RENAL-BODY FLUID MECHANISM AND THE RENIN-ANGIOTENSIN SYSTEM: MECHANISMS OF HYPERTENSION	257
Mechanisms of Blood Flow Control ...	231	The Renal-Body Fluid System for Arterial Pressure Control	257
Long-Term Blood Flow Regulation	235	Role of the Renin-Angiotensin System and of Aldosterone in Long-Term Arterial Pressure Regulation	262
Nervous Regulation of the Circulation ...	237	Hypertension (High Blood Pressure)	264
The Autonomic Nervous System	237	Volume-loading Hypertension	264
"Patterns" of Circulatory Responses Elicited by Different Central Nervous System Centers	240	Vasoconstrictor Hypertension	266
Reflex Regulation of the Circulation ..	241	Types of Hypertension with Both Volume-Loading and Vasoconstrictor Components	268
Humoral Regulation of the Circulation ...	241	Essential Hypertension	269
21 ARTERIAL PRESSURE REGULATION: I. RAPID PRESSURE CONTROL BY NERVOUS REFLEXES AND OTHER MECHANISMS	244	Effects of Hypertension on the Body ..	270
Normal Arterial Pressures	244	23 CARDIAC OUTPUT, VENOUS RETURN, AND THEIR REGULATION	272
The Mean Arterial Pressure	244	Normal Values for Cardiac Output at Rest and During Activity	272
Relationship of Arterial Pressure to Cardiac Output and Total Peripheral Resistance	246	Regulation of Cardiac Output	272
The Overall System for Arterial Pressure Regulation	246	Role of the Heart in Cardiac Output Regulation—Its "Permissive" Role	272
Rapidly Acting Nervous Mechanisms for Arterial Pressure Control	247	Role of Total Peripheral Resistance in Determining Normal Venous Return and Cardiac Output	274
The Arterial Baroreceptor Control System—Baroreceptor Reflexes	247	Effect of Arteriovenous Fistulae on Cardiac Output	275
Control of Arterial Pressure by the Carotid and Aortic Chemoreceptors—Effect of Oxygen Lack on Arterial Pressure	250	Some Special Problems in Cardiac Output Regulation	275
Atrial and Pulmonary Artery Reflexes That Help Regulate Arterial Pressure and Other Circulatory Factors	250	Role of Blood Volume and the "Mean Systemic Filling Pressure" in Cardiac Output Regulation	276
The CNS Ischemic Response—Control of Arterial Pressure by the Vasomotor Center in Response to Diminished Brain Blood Flow	250	Regulation of Cardiac Output in Heavy Exercise, Which Requires Simultaneous Peripheral and Cardiac Adjustments	276
Special Features of Nervous Control of Arterial Pressure	251	Abnormally Low and Abnormally High Cardiac Outputs	277
Participation of the Veins in Nervous Regulation of Cardiac Output and Arterial Pressure	251	Graphical Analysis of Cardiac Output Regulation	278
Role of the Skeletal Nerves and Skeletal Muscles in Increasing Cardiac Output and Arterial Pressure	252	Cardiac Output Curves	279
Respiratory Waves in the Arterial Pressure	252	Venous Return Curves	280
Arterial Pressure Vasomotor Waves—Oscillation of the Pressure Reflex Control Systems	252	Analysis of Cardiac Output and Right Atrial Pressure, Using Cardiac Output and Venous Return Curves ...	282

Methods of Measuring Cardiac Output	284

Photochemistry of Color Vision by the Cones.....	716	Functional Anatomy of the Cochlea ..	735
Automatic Regulation of Retinal Sensitivity—Dark and Light Adaptation.....	716	Transmission of Sound Waves in the Cochlea—The "Traveling Wave".....	737
Color Vision.....	717	Function of the Organ of Corti.....	738
The Tri-Color Mechanism of Color Perception.....	718	Determination of Sound Frequency—The "Place" Principle.....	739
Color Blindness.....	718	Determination of Loudness.....	739
Neural Function of the Retina.....	720	General Auditory Mechanisms.....	740
Neural Organization of the Retina....	720	The Auditory Pathway.....	740
Stimulation of the Rods and Cones ..	720	Function of the Cerebral Cortex in Hearing.....	741
Stimulation of the Bipolar Cells.....	721	Discrimination of Direction from Which Sound Emanates.....	742
Stimulation and Function of the Horizontal Cells.....	721	Centrifugal Conduction of Impulses from the Central Nervous System....	743
Stimulation and Function of the Amacrine Cells.....	721	Hearing Abnormalities.....	743
Excitation of the Ganglion Cells.....	721		
Different Types of Signals Transmitted by the Ganglion Cells Through the Optic Nerve.....	722		

Types of Deafness	743	Special Attributes of the Taste	
62 THE CHEMICAL SENSES—TASTE AND SMELL	745	Sense	748
The Sense of Taste	745	The Sense of Smell	748
The Primary Sensations of Taste.....	745	The Olfactory Membrane.....	749
The Taste Bud and Its Function.....	746	Stimulation of the Olfactory Cells	749
Transmission of Taste Signals into the Central Nervous System.....	747	Transmission of Smell Signals into the Central Nervous System.....	750

XI THE GASTROINTESTINAL TRACT

753

63 MOVEMENT OF FOOD THROUGH THE ALIMENTARY TRACT.....	754	Secretion of Saliva	772
General Principles of Gastrointestinal Motility.....	754	Esophageal Secretion	774
Characteristics of the Gastrointestinal Wall.....	754	Gastric Secretion.....	774
Innervation of the Gut—The Enteric Nervous System	756	Characteristics of the Gastric Secretions	774
Hormonal Control of Gastrointestinal Motility.....	758	Regulation of Gastric Secretion by Nervous and Hormonal Mechanisms.....	776
Functional Types of Movement in the Gastrointestinal Tract.....	758	Pancreatic Secretion	778
The Mixing Movements	758	Regulation of Pancreatic Secretion....	780
The Propulsive Movements—Peristalsis.....	758	Secretion of Bile and Functions of the Biliary Tree.....	781
Ingestion of Food.....	759	Physiologic Anatomy of Biliary Secretion	781
Mastication (Chewing).....	759	The Bile Salts and Their Function....	782
Swallowing (Deglutition).....	760	Secretion of Cholesterol; Gallstone Formation.....	783
Function of the Lower Esophageal Sphincter (Gastroesophageal Sphincter).....	761	Secretions of the Small Intestine.....	784
Motor Functions of the Stomach.....	762	Secretion of Mucus by Brunner's Glands and by Mucous Cells of the Intestinal Surface	784
Storage Function of the Stomach.....	762	Secretion of the Intestinal Digestive Juices—The Crypts of Lieberkühn....	784
Mixing and Propulsion of Food in the Stomach—The Basic Electrical Rhythm of the Stomach	762	Regulation of Small Intestinal Secretion	785
Emptying of the Stomach	763	Secretions of the Large Intestine.....	785
Movements of the Small Intestine	765	65 DIGESTION AND ABSORPTION IN THE GASTROINTESTINAL TRACT.....	787
Mixing Contractions (Segmentation Contractions)	765	Digestion of the Various Foods	787
Propulsive Movements.....	766	Digestion of Carbohydrates	787
Function of the Ileocecal Valve.....	766	Digestion of Fats	788
Movements of the Colon.....	767	Digestion of Proteins.....	790
Defecation.....	768	Basic Principles of Gastrointestinal Absorption	790
Other Autonomic Reflexes Affecting Bowel Activity.....	769	Anatomical Basis of Absorption	790
64 SECRETORY FUNCTIONS OF THE ALIMENTARY TRACT	770	Basic Mechanisms of Absorption	792
General Principles of Gastrointestinal Secretion	770	Absorption in the Small Intestine.....	792
Anatomical Types of Glands	770	Absorption of Water	792
Basic Mechanisms of Stimulation of the Gastrointestinal Glands.....	770	Absorption of Ions.....	792
Basic Mechanism of Secretion by Glandular Cells.....	771	Absorption of Nutrients	794
Lubricating and Protective Properties of Mucus and Its Importance in the Gastrointestinal Tract	772	Absorption in the Large Intestine: Formation of the Feces	796
		66 PHYSIOLOGY OF GASTROINTESTINAL DISORDERS.....	798
		Disorders of Swallowing and of the Esophagus.....	798
		Disorders of the Stomach.....	798

Peptic Ulcer.....	799	General Disorders of the Gastrointestinal Tract.....	803
Disorders of the Small Intestine.....	801	Vomiting.....	803
Disorders of the Large Intestine.....	802	Nausea.....	804
Constipation.....	802	Gastrointestinal Obstruction.....	804
Diarrhea.....	802	Gases in the Gastrointestinal Tract and Flatus.....	805
Paralysis of Defecation in Spinal Cord Injuries.....	803		

XII METABOLISM AND TEMPERATURE REGULATION

807

67 METABOLISM OF CARBOHYDRATES AND FORMATION OF ADENOSINE TRIPHOSPHATE	808	The Fat Deposits.....	820
Release of Energy from Foods and the Concept of "Free Energy".....	808	Adipose Tissue.....	820
Role of Adenosine Triphosphate (ATP) in Metabolism.....	808	The Liver Lipids.....	820
Central Role of Glucose in Carbohydrate Metabolism.....	809	Use of Triglycerides for Energy, and Formation of Adenosine Triphosphate (ATP).....	820
Transport of Glucose Through the Cell Membrane.....	809	Formation of Acetoacetic Acid in the Liver and Its Transport in the Blood.....	821
Facilitation of Glucose Transport by Insulin.....	810	Synthesis of Triglycerides from Carbohydrates.....	822
Phosphorylation of Glucose.....	810	Synthesis of Triglycerides from Proteins.....	823
Storage of Glycogen in Liver and Muscle.....	810	Regulation of Energy Release from Triglycerides.....	823
Glycogenesis.....	810	Obesity.....	824
Glycogenolysis.....	811	Phospholipids and Cholesterol.....	824
Release of Energy from the Glucose Molecule by the Glycolytic Pathway.....	811	Phospholipids.....	824
Glycolysis and the Formation of Pyruvic Acid.....	811	Cholesterol.....	825
Conversion of Pyruvic Acid to Acetylcoenzyme A.....	812	Cellular Structural Functions of Phospholipids and Cholesterol—Especially for Membranes.....	826
The Citric Acid Cycle.....	812	Atherosclerosis.....	826
Formation of ATP by Oxidative Phosphorylation.....	813	Experimental Production of Atherosclerosis in Animals.....	826
Summary of ATP Formation During the Breakdown of Glucose.....	814	Atherosclerosis in the Human Being.....	827
Control of Glycolysis and Oxidation by ATP and ADP.....	815	Summary of Factors Causing Atherosclerosis.....	827
Anaerobic Release of Energy—"Anaerobic Glycolysis".....	815	69 PROTEIN METABOLISM	829
Release of Energy from Glucose by the Phosphogluconate Pathway.....	816	Basic Properties of Proteins.....	829
Glucose Conversion to Glycogen or Fat.....	816	The Amino Acids.....	829
Formation of Carbohydrates from Proteins and Fats—"Gluconeogenesis".....	816	Transport and Storage of Amino Acids.....	829
Blood Glucose.....	817	The Blood Amino Acids.....	829
68 LIPID METABOLISM	818	Storage of Amino Acids as Proteins in the Cells.....	831
Transport of Lipids in The Blood.....	818	Metabolic Roles of the Plasma Proteins... Essential and Nonessential Amino Acids.....	832
Transport from the Gastrointestinal Tract—The Chylomicrons.....	818	Use of Proteins for Energy.....	832
Transport of Fatty Acids in Combination with Albumin—"Free Fatty Acid".....	819	Obligatory Degradation of Proteins... Hormonal Regulation of Protein Metabolism.....	833
The Lipoproteins.....	819	70 THE LIVER AS AN ORGAN	835
		Physiologic Anatomy of the Liver.....	835
		Function of the Hepatic Vascular System.....	836

Metabolic Functions of the Liver.....	836	The Concept of a "Set-Point" for	
Carbohydrate Metabolism.....	837	Temperature Control	856
Fat Metabolism.....	837	Behavioral Control of Body	
Protein Metabolism	837	Temperature	857
Miscellaneous Metabolic Functions of		Local Skin Temperature Reflexes	857
the Liver	838	Abnormalities of Body Temperature	
Excretion of Bilirubin in the Bile	838	Regulation	858
71 ENERGETICS AND METABOLIC		Fever	858
RATE	841	Exposure of the Body to Extreme	
Importance of Adenosine Triphosphate		Cold	859
(ATP) in Metabolism.....	841	73 DIETARY BALANCES; REGULATION	
Phosphocreatine as a Storage Depot		OF FEEDING; OBESITY AND	
for Energy and for Buffering the		STARVATION; VITAMINS AND	
Concentration of ATP.....	842	MINERALS	861
Anaerobic Versus Aerobic Energy ...	842	Dietary Balances	861
Summary of Energy Utilization by		Energy Available in Foods.....	861
the Cells.....	843	Regulation of Food Intake.....	863
Control of Energy Release in the Cell	843	Neural Centers for Regulation of	
The Metabolic Rate	844	Food Intake	863
Measurement of the Metabolic Rate ..	845	Factors That Regulate Food Intake ...	863
Factors That Affect the Metabolic		Obesity	865
Rate.....	845	Treatment of Obesity	866
The Basal Metabolic Rate	847	Inanition	866
72 BODY TEMPERATURE,		Starvation.....	866
TEMPERATURE REGULATION,		Vitamins	867
AND FEVER	849	Vitamin A.....	867
The Insulator System of the Body.....	849	Thiamine (Vitamin B ₁)	867
Flow of Blood to the Skin and Heat		Niacin	868
Transfer from the Body Core	850	Riboflavin (Vitamin B ₂).....	868
Balance Between Heat Production and		Vitamin B ₁₂	869
Heat Loss	850	Folic Acid (Pteroylglutamic Acid).....	869
Heat Loss	850	Pyridoxine (Vitamin B ₆).....	869
Sweating and Its Regulation by the		Pantothenic Acid	870
Autonomic Nervous System.....	852	Ascorbic Acid (Vitamin C)	870
Regulation of Body Temperature—The		Vitamin D.....	870
"Hypothalamic Thermostat"	853	Vitamin E.....	871
Neuronal Effector Mechanisms That		Vitamin K.....	871
Decrease or Increase Body		Mineral Metabolism	871
Temperature	854		

XIII ENDOCRINOLOGY AND REPRODUCTION

74 INTRODUCTION TO		Action of the Thyroid Hormones in	
ENDOCRINOLOGY	876	the Cell Nucleus.....	881
Nature of a Hormone	876	Measurement of Hormone Concentrations	
An Overview of the Important		in the Blood.....	882
Endocrine Glands and Their		75 THE PITUITARY HORMONES AND	
Hormones	876	THEIR CONTROL BY THE	
Chemistry of the Hormones.....	878	HYPOTHALAMUS	884
Hormone Receptors and Their		The Pituitary Gland and Its Relation to	
Activation.....	879	the Hypothalamus	884
Mechanisms of Hormonal Action.....	879	Cell Types in the Anterior Pituitary	
The Cyclic AMP Mechanism for		Gland	885
Controlling Cell Function—A "Second		Control of Pituitary Secretion by the	
Messenger" for Hormone Mediation ..	880	Hypothalamus	885
Action of Steroid Hormones on the			
Genes to Cause Protein Synthesis....	881		

The Hypothalamic-Hypophysial Portal System.....	885	Effects of Cortisol on Carbohydrate Metabolism.....	914
Physiological Functions of Growth Hormone	887	Effects of Cortisol on Protein Metabolism.....	915
Metabolic Effects of Growth Hormone	887	Effects of Cortisol on Fat Metabolism.....	915
Stimulation of Cartilage and Bone Growth—Role of the Somatomedins ..	889	Other Effects of Cortisol.....	916
Regulation of Growth Hormone Secretion	889	Regulation of Cortisol Secretion—Adrenocorticotrophic Hormone (ACTH).....	917
Abnormalities of Growth Hormone Secretion	891	The Adrenal Androgens	919
The Posterior Pituitary Gland and Its Relation to the Hypothalamus.....	893	Abnormalities of Adrenocortical Secretion	920
Chemical Nature of Antidiuretic Hormone (Vasopressin) and Oxytocin.....	893	Hypoadrenalism—Addison's Disease	920
Physiological Functions of Antidiuretic Hormone (Vasopressin)..	893	Hyperadrenalism—Cushing's Syndrome	920
Oxytocic Hormone.....	895	Primary Aldosteronism.....	921
76 THE THYROID METABOLIC HORMONES.....	897	Adrenogenital Syndrome.....	922
Formation and Secretion of the Thyroid Hormones	897	78 INSULIN, GLUCAGON, AND DIABETES MELLITUS	923
Iodine Requirements for Formation of Thyroxine	897	Insulin and Its Metabolic Effects.....	923
The Iodide Pump (Iodide Trapping) ...	898	Effect of Insulin on Carbohydrate Metabolism.....	924
Thyroglobulin and Chemistry of Thyroxine and Triiodothyronine Formation.....	898	Effect of Insulin on Fat Metabolism ..	926
Release of Thyroxine and Triiodothyronine from Thyroglobulin.....	899	Effect of Insulin on Protein Metabolism and Growth.....	928
Transport of Thyroxine and Triiodothyronine to the Tissues	899	Control of Insulin Secretion.....	929
Functions of the Thyroid Hormones in the Tissues.....	900	Role of Insulin in "Switching" Between Carbohydrate and Lipid Metabolism.....	930
General Increase in Metabolic Rate... ..	900	Glucagon and Its Functions.....	930
Effect of Thyroid Hormone on Growth	901	Effects on Glucose Metabolism	931
Effects of Thyroid Hormone on Specific Bodily Mechanisms.....	901	Regulation of Glucagon Secretion....	931
Regulation of Thyroid Hormone Secretion	903	Somatostatin—Its Effect on Inhibition of Glucagon and Insulin Secretion	932
Antithyroid Substances.....	904	Pancreatic Polypeptide	932
Diseases of the Thyroid.....	905	Summary of Blood Glucose Regulation ...	932
Hyperthyroidism	905	Diabetes Mellitus	933
Hypothyroidism	906	Pathological Physiology of Diabetes Mellitus	933
77 THE ADRENOCORTICAL HORMONES.....	909	Physiology of Diagnosis	934
Chemistry of Adrenocortical Secretion	909	Treatment of Diabetes.....	935
Functions of the Mineralocorticoids—Aldosterone	911	Diabetic Coma	935
Renal Effects of Aldosterone	911	Hyperinsulinism.....	936
Effects of Aldosterone on Sweat Glands, Salivary Glands, and Intestinal Absorption	912	79 PARATHYROID HORMONE, CALCITONIN, CALCIUM AND PHOSPHATE METABOLISM, VITAMIN D, BONE, AND TEETH.....	937
Cellular Mechanism of Aldosterone Action.....	912	Calcium and Phosphate in the Extracellular Fluid and Plasma—Function of Vitamin D	937
Regulation of Aldosterone Secretion ..	913	Absorption and Excretion of Calcium and Phosphate	937
Functions of the Glucocorticoids.....	914	Vitamin D and Its Role in Calcium and Phosphate Absorption	937
		The Calcium in the Plasma and Interstitial Fluid	939
		The Inorganic Phosphate in the Extracellular Fluids	940

Effects of Altered Calcium and Phosphate Concentrations in the Body Fluids	940	Hypogonadism in the Male	965
Bone and Its Relationship to Extracellular Calcium and Phosphates ...	941	Testicular Tumors and Hypergonadism in the Male	965
Precipitation and Absorption of Calcium and Phosphate in Bone—Equilibrium with the Extracellular Fluids	941	The Pineal Gland—Its Function in Controlling Seasonal Fertility	966
Exchangeable Calcium	942	81 FEMALE PHYSIOLOGY BEFORE PREGNANCY, AND THE FEMALE HORMONES.....	968
Deposition and Absorption of Bone—Remodeling of Bone	942	Physiologic Anatomy of the Female Sexual Organs	968
Parathyroid Hormone.....	943	The Female Hormonal System	968
Effect of Parathyroid Hormone on Calcium and Phosphate Concentrations in the Extracellular Fluid	944	The Monthly Ovarian Cycle and Function of the Gonadotropic Hormones.....	969
Control of Parathyroid Secretion by the Calcium Ion Concentration	946	The Corpus Luteum—The “Luteal” Phase of the Ovarian Cycle	971
Calcitonin	946	Functions of the Ovarian Hormones—Estradiol and Progesterone ...	972
Overall Control of Calcium Ion Concentration.....	948	Chemistry of the Sex Hormones.....	972
Physiology of Parathyroid and Bone Diseases	948	Functions of the Estrogens—Effects on the Primary and Secondary Sexual Characteristics.....	974
Hypoparathyroidism	948	Functions of Progesterone.....	975
Hyperparathyroidism	949	The Endometrial Cycle and Menstruation	975
Rickets.....	950	Regulation of the Female Monthly Rhythm—Interplay Between the Ovarian and Hypothalamic-Pituitary Hormones ...	977
Osteoporosis.....	950	Feedback Oscillation of the Hypothalamic-Pituitary-Ovarian System.....	978
Physiology of the Teeth.....	950	Puberty and Menarche	978
Function of the Different Parts of the Teeth	951	The Menopause	979
Dentition	951	Abnormalities of Secretion by the Ovaries	979
Mineral Exchange in Teeth.....	952	The Female Sexual Act.....	980
Dental Abnormalities.....	952	Female Fertility.....	981
80 REPRODUCTIVE AND HORMONAL FUNCTIONS OF THE MALE.....	954	82 PREGNANCY AND LACTATION.....	983
Spermatogenesis.....	954	Maturation of the Ovum	983
The Steps of Spermatogenesis	954	Transport, Fertilization, and Implantation of the Developing Ovum	983
Function of the Seminal Vesicles.....	957	Early Intrauterine Nutrition of the Embryo.....	985
Function of the Prostate Gland.....	957	Function of the Placenta	985
Semen	957	Developmental and Physiologic Anatomy of the Placenta	985
Abnormal Spermatogenesis and Male Fertility	957	Permeability of the Placental Membrane.....	986
The Male Sexual Act	958	Hormonal Factors in Pregnancy.....	987
Neuronal Stimulus for Performance of the Male Sexual Act	958	Human Chorionic Gonadotropin and Its Effect in Causing Persistence of the Corpus Luteum and in Preventing Menstruation	987
Stages of the Male Sexual Act.....	959	Secretion of Estrogens by the Placenta	988
Testosterone and Other Male Sex Hormones	960	Secretion of Progesterone by the Placenta	988
Secretion, Metabolism, and Chemistry of the Male Sex Hormone	960	Human Chorionic Somatomammotropin	989
Functions of Testosterone	961	Other Hormonal Factors in Pregnancy.....	989
Basic Intracellular Mechanism of Action of Testosterone	963		
Control of Male Sexual Functions by the Gonadotropic Hormones—FSH and LH	963		
Abnormalities of Male Sexual Function ...	964		
The Prostate Gland and Its Abnormalities	964		

Response of the Mother's Body to Pregnancy.....	990	83 SPECIAL FEATURES OF FETAL AND NEONATAL PHYSIOLOGY.....	997
Preeclampsia and Eclampsia.....	991	Growth and Functional Development of the Fetus.....	997
Parturition.....	991	Development of the Organ Systems.....	997
Increased Uterine Excitability Near Term.....	991	Adjustments of the Infant to Extrauterine Life.....	999
Onset of Labor—A Positive Feedback Theory for Its Initiation.....	992	Onset of Breathing.....	999
Abdominal Muscle Contractions During Labor.....	993	Circulatory Readjustments at Birth.....	1000
Mechanisms of Parturition.....	993	Nutrition of the Newborn Infant....	1001
Separation and Delivery of the Placenta.....	993	Special Functional Problems in the Neonatal Infant.....	1001
Labor Pains.....	993	Special Problems of Prematurity.....	1004
Involution of the Uterus.....	994	Immature Development of the Premature Infant.....	1004
Lactation.....	994	Instability of the Control Systems in the Premature Infant.....	1004
Development of the Breasts.....	994	Danger of Blindness Caused by Oxygen Therapy in the Premature Infant.....	1004
Initiation of Lactation—Function of Prolactin.....	994	Growth and Development of the Child ..	1005
The Ejection or “Let-Down” Process in Milk Secretion—Function of Oxytocin.....	995	Behavioral Growth.....	1005
Milk and the Metabolic Drain on the Mother Caused by Lactation.....	995		

XIV SPORTS PHYSIOLOGY 1007
