

Contents

SECTION ONE/LABORATORY TECHNIQUES

1 Basic laboratory principles and calculations, 3

PART I

Basic laboratory principles, 4

Roy L. Alexander

John D. Bauer

Units of measurements, 4

Measurement of mass, 6

Laboratory supplies, 12

Volumetric measurements, 16

Thermometry, 23

Centrifuges and heating baths, 24

Laboratory water, 26

Safety in the clinical laboratory, 28

PART II

Calculations in clinical chemistry, 33

Elizabeth Ann Byrne

Dilution, 33

Weights and concentrations, 34

Calculations based on photometric measurements
(Beer's law), 36

Buffers, 37

Enzyme calculations, 38

Standard curves, 39

Additional exercises, 40

Appendix: answers to problems, 41

2 Collection and handling of patient specimens, 43

Nathan A. Pickard

Types of specimens, 44

Collection vessels, 44

Collection variables, 46

Transportation, 47

Laboratory criteria for unacceptable samples, 47

Sample processing, 48

Specimen stability and storage, 49

3 Spectral techniques, 51

Christopher S. Frings

Jack Gauldie

Light and matter, 53

Absorption spectroscopy, 55

Atomic absorption, 62

Flame photometry, 64

Fluorometry, 65

Nephelometry and turbidity, 67

Refractivity, 72

4 Chromatography: theory and practice, 74

M. Wilson Tabor

Branches of chromatography, 76

General principles, 77

Resolution, 79

Polarity, 86

Mechanisms of chromatography, 90

Sample preparation for chromatography, 94

5 Liquid chromatography, 100

Larry D. Bowers

Resolution, efficiency, and speed of analysis, 102

Quantitation, 105

Selection of a chromatographic mode, 107

Bonded reversed-phase chromatography, 109

Instrumentation, 112

Summary, 114

6 Gas chromatography, 117

Alphonse Poklis

Molecules that can be separated by gas
chromatography, 119

Theory of gas chromatographic separation, 120

Mobile-phase considerations, 123

Stationary-phase considerations, 124

Derivatization, 127

Selection of a separation system, 128

Components of gas chromatograph, 130

7 Isotopes in clinical chemistry, 136

I-Wen Chen

Basic structure of atom, 138

Principles of radiation and radioactivity, 139

- Isotope detection, 145
Radiation health safety, 150
- 8 Electrophoresis, 152**
John M. Brewer
Definitions, 153
Application of electrical field to solution containing a charged particle, 154
Factors affecting mobilities of macromolecules, 155
Support media, 157
Enhanced-resolution techniques, 158
Methods involving separation based on molecular size, 159
Selection of methods and conditions, 160
Locating the analyte, 161
Clinical applications, 164
- 9 Immunological reactions, 166**
Susan Bassion
Antigens, 167
Antibodies, 169
Antigen-antibody reactions, 171
Antigen-antibody precipitation reactions, 174
- 10 Immunochemical techniques, 179**
Paul E. Hurtubise
Susan Bassion
Jack Gauldie
Peter Horsewood
Reagents, 181
Antibody-antigen reaction, 184
Immunodiffusion (Ouchterlony), 184
Immunoelectrophoresis, 187
Counterimmunoelectrophoresis, 189
Two-dimensional immunoelectrophoresis, 191
Radial immunodiffusion, 192
Laurell "rocket" immunoelectrophoresis, 192
Immunonephelometry, 194
Agglutination assays, 196
Complement-fixation assays, 200
Indicator-labeled immunoassays, 202
Fluoroimmunoassay, 203
Enzyme immunoassay, 204
Summary, 209
- 11 Competitive-binding assays, 21**
Stephan G. Thompson
Definition of competitive-binding assays, 212
Quantitation of antigen-antibody reactions: law of mass action, 213
Competitive binding, 214
Separation techniques, 215
Labeled ligand, 215
Affinity of protein-ligand interactions, 216
Cross-reactivity, 218
Data reduction, 218
Examples of specific competitive-binding assays, 221
Advantages and disadvantages of different approaches to competitive protein-binding assays, 228
- 12 Measurement of colligative properties, 232**
James E. Davis
Colligative properties, 233
Clinical use of osmometry, 235
Principles of measurement, 236
Colloid osmotic pressure, 238
Nonclinical use of osmometry, 239
- 13 Electrochemistry, 240**
Stephen G. Weber
Units, conventions, and definitions, 241
Potentiometry, 246
Amperometry and coulometry, 249
- 14 Electrode-based measurements, 252**
Stephen G. Weber
Activity, 253
Potentiometric sensors, 254
Current-measuring sensors, 257
- 15 Automation, 261**
James E. Davis
Definitions, 262
Automation of chemical analyses, 263
Concepts of automation: definitions, 266
Common automated instruments, 267
Trends in automation, 271
Economic justification, 271
- 16 Laboratory computers, 273**
David G. Rhoads
Background, 276
Objectives, 276
How computers function, 276
Applications, 281
- 17 Laboratory statistics, 287**
Carl C. Garber
R. Neill Carey
Statistical descriptions of a population, 289
Statistical comparisons of populations, 293
Nonparametric statistics, 296
Linear regression and correlation, 296
- 18 Reference values, 301**
Charles Ralph Buncher
Dan Weiner
Definition of normal, 302
Are data normally distributed? 302
Number of samples needed for reference range, 305
Proper sampling of populations for reference range, 305
Sensitivity and specificity, 306
Example calculation of Kolmogorov-Smirnov test, 309
- 19 Quality control, 310**
Bradley E. Copeland
Purpose, 312
Quality control pool, 312

- Daily decisions, 315
 Weekly review of day-to-day values, 318
 Monthly review of day-to-day values, 321
 Long-term decisions on methodology related to accuracy and precision, 325
 Accuracy control with definitive methods, reference methods, primary standards, and reference materials, 332
 Yearly healthy human value study, 334
 Record keeping and software form development, 335
 Preventive maintenance, 336
- 20 Evaluation of methods, 338**
R. Neill Carey
Carl C. Garber
- Purpose of method evaluation, 340
 Selection of methods, 342
 Laboratory evaluation of a method, 345
 Experiments to estimate magnitude of specific errors, 346
 Final-evaluation experiments, 348
 Estimation of total error, 351
 Confidence-interval criteria for judging analytical performance, 352
 Other evaluation protocols, 354
 Discussion, 355
 Example calculations and decision making for a performance evaluation study for glucose, 355
- SECTION TWO/PATHOPHYSIOLOGY**
- 21 Physiology and pathophysiology of body water and electrolytes, 363**
Leonard I. Kleinman
John M. Lorenz
- Body water compartments, 366
 Regulation of body fluid compartment osmolarity and volume, 370
 Water metabolism, 375
 Sodium metabolism, 378
 Potassium metabolism, 382
 Chloride metabolism, 384
- 22 Acid-base control and acid-base disorders, 387**
John E. Sherwin
Berndt B. Bruegger
- Acid-base control, 388
 Acid-base disorders, 395
- 23 Renal function, 403**
M. Roy First
- Anatomy of kidney, 405
 Renal physiology, 405
 Pathological conditions of kidney, 411
 Renal function tests, 414
 Change of analyte in disease, 416
- 24 Liver function, 420**
John E. Sherwin
- Anatomy of liver, 421
- Normal function of liver, 423
 Liver-function alterations during disease, 429
 Liver-function tests, 433
 Change of analyte in disease, 434
- 25 Bone disease, 439**
Reginald Tsang
Harold Marder
- Bone structure and function, 440
 Biochemistry and physiology, 442
 Bone disorders, 446
 Change of analyte in disease, 450
- 26 Pancreatic function, 460**
Michael D.D. McNeely
- Anatomy, 461
 Endocrine functions, 461
 Exocrine functions, 462
 Pathological conditions, 463
 Pancreatic function tests, 465
 Change of analyte in disease, 465
- 27 Gastrointestinal digestive disease, 468**
Michael D.D. McNeely
- Anatomy and general functions, 469
 Digestion, 470
 Absorption, 474
 Pathological conditions, 475
 Gastrointestinal function tests, 478
 Change of analyte in disease, 482
- 28 Cardiac disease and hypertension, 488**
W. Fraser Bremner
- PART I**
Cardiac disease, 490
- Anatomy of heart, 490
 Cardiac function, 491
 Myocardial metabolism, 492
 Pathological conditions, 494
 Function tests, 498
 Drug therapy, 499
 Change of analyte in disease, 500
- PART II**
Hypertension, 503
- Arterial anatomy and function, 503
 Regulation of arterial function, 504
 Role of catecholamines in arterial tension, 505
 Pathological conditions, 505
 Function test: blood pressure, 506
 Drug therapy, 506
 Change of analyte in disease, 507
- 29 Muscle disease, 509**
Béla Nagy
- Anatomy of muscle, 510
 Function, 511
 Normal biochemistry, 513

- Pathological conditions of muscle, 516
Change of analyte in disease, 519
- 30 Diabetes mellitus, 520**
Thomas Skillman
Normal biochemistry: glucose homeostasis, 522
Concepts of pathogenesis of diabetes syndromes, 528
Biochemical manifestations of diabetes, 533
Pathological conditions: acute complications of diabetes mellitus, 534
Chronic complications of diabetes, 540
Treatment of diabetes syndromes, 541
Function test: oral glucose tolerance test, 544
Change of analyte in disease, 546
- 31 Disorders of lipid metabolism, 550**
Herbert K. Naito
- PART I**
Lipids, 552
Normal physiology of lipids, 552
Bioenergetics, 559
Cholesterol metabolism, 560
Triglyceride metabolism, 566
Phospholipid metabolism, 569
Sphingolipid metabolism, 572
- PART II**
Lipoproteins, 574
Classification of lipoproteins, 574
Lipoprotein metabolism, 577
Recapitulation of lipid and lipoprotein metabolism, 580
Hyperlipidemia, 580
Hyperlipoproteinemia, 580
Classification of hyperlipoproteinemias, 581
Transformation of hyperlipidemia to hyperlipoproteinemia, 586
Clinical implications of hyperlipidemia, 589
Treatment, 592
- 32 Alcoholism, 594**
Charles L. Mendenhall
Robert E. Weesner
Diagnosis of alcoholism, 595
Biochemical and metabolic alterations, 596
Nutritional alterations associated with alcoholism and alcoholic liver disease, 597
Pathology: systemic diseases of the alcoholic, 600
Change of analyte in disease, 604
Tests of liver function, 606
- 33 Hemoglobin, porphyrin, and iron metabolism, 611**
John D. Bauer
- PART I**
Hemoglobin, 613
Structure and function of hemoglobin, 613
Normal biochemistry, 618
Pathology, 624
Change of analyte in disease, 631
- PART II**
Iron metabolism, 633
Physiological function of iron, 633
Iron metabolism, 633
Pathology, 635
Function test, 637
Change of analyte in disease, 637
- PART III**
Heme biosynthesis and the porphyrias, 639
Normal biochemistry, 639
Pathology: the porphyrias, 641
Change of analyte in disease, 645
- PART IV**
Hemoglobin destruction (catabolism), 646
Destruction of red blood cells, 646
Formation and catabolism of bilirubin, 648
Change of analyte in disease, 650
- 34 Vitamins, 656**
Marge A. Brewster
Fat-soluble vitamins, 659
Water-soluble vitamins, 666
- 35 Pregnancy and fetal function, 686**
Paul T. Russell
Anatomical and physiological interaction of mother and fetus, 687
Biochemistry of amniotic fluid, 689
Maternal biochemical changes during pregnancy, 690
Fetal biochemical changes during prenatal development, 694
Pathological conditions associated with pregnancy and perinatal period, 698
Change of analyte in disease, 701
- 36 Extravascular biological fluids, 710**
Lewis Glasser
Serous fluids, 711
Synovial fluid, 715
- 37 Central nervous system, 718**
Gerald Moriarty
Basic neuroanatomy, 719
Physiology and biochemistry, 720
Pathological conditions, 723
Change of analyte in disease, 728
- 38 Endocrine function, 732**
- PART I**
General aspects of hormone physiology, 733
Bidy Kulkarni
Introduction and description of an endocrine function, 733
Hormone transport, 735
Mechanisms of regulatory control of hormonal levels, 735
Mechanisms of hormone action, 736

PART II

The hypothalamopituitary system, 739*Boleslaw H. Liwnicz**Regina G. Liwnicz*

Anatomy and histology, 739

Function of hypothalamopituitary system, 741

Pathological conditions, 744

Function tests, 746

39 Thyroid, 748*Mariano Fernandez-Ulloa**Harry R. Mazon*

Embryology, 750

Anatomy and histology, 750

Thyroid physiology, 750

Pathological conditions, 760

Tests of thyroid function, 764

Change of analyte in disease, 765

40 Gastrointestinal hormones, 773*Stephen N. Joffe*

Anatomy, 775

Physiology, 778

Characteristics of gastroenteropancreatic (GEP) hormones and polypeptides, 778

41 The gonads, 789*Elizabeth J. Kicklighter**Bidy Kulkarni*

Sex differentiation and anatomy of reproductive system, 790

Physiology of sex steroid hormones, 792

Biosynthesis of steroid hormones, 795

Transport and metabolism, 798

Pathological conditions, 801

Function tests, 803

Change of analyte in disease, 804

42 Parathyroid gland, 806*Richard J. Kozera*

Anatomy, 807

Physiology, 807

Pathological conditions, 809

Change of analyte in disease, 813

43 Adrenal hormones, 816*Robert Hoff*

Anatomy, 817

Physiology of adrenal hormones, 817

Biosynthesis, 820

Transport and catabolism, 822

Control and regulation, 822

Pathological conditions, 824

Function tests, 827

Change of analyte in disease, 829

44 Diseases of genetic origin, 832*Thaddeus E. Kelly*

Genetic basis of inheritance, 833

Pathological disorders associated with abnormal chromosomes, 836

Pathological disorders associated with biochemical changes, 841

Genetic screening, 857

Comment, 861

Change of analyte in disease, 861

45 Psychiatric disorders, 864*David L. Garver*

Central nervous system: anatomy, biochemistry, and physiology, 866

Psychiatric disorders, 869

Function tests, 874

Treatment, 876

Change of analyte in disease, 880

46 Neoplasia, 882*Bernard E. Statland**Per Winkel*

Scope of problem, 883

Cancer: nature of the disease, 884

Overview of roles of laboratory tests, 885

Definition of ideal tumor marker, 886

Types of analytes, 887

Summary, 894

47 Toxicology, 897*Alphonse Poklis**Amadeo J. Pesce*

Definitions, 898

Dosage relationships, 898

Mechanisms of toxicity, 899

Factors that influence toxicity, 900

Drugs and nontherapeutic agents encountered in clinical laboratory, 903

Antidotes and treatment, 906

Drug interactions, 907

SECTION THREE/METHODS OF ANALYSIS**48 Classifications and description of proteins, lipids, and carbohydrates, 911**

PART I

Proteins, 912*Lawrence A. Kaplan*

Definition and classification, 912

Chemical properties, 916

Physical properties, 916

Biological properties, 917

PART II

Lipids, 918*Herbert K. Naito*

Definition and classification, 918

Chemical and physical properties, 923

Biological properties, 923

- PART III**
Carbohydrates, 924
Lawrence A. Kaplan
 Definition and classification, 924
 Chemical properties, 925
 Physical properties, 926
 Biological properties, 926
- 49 Enzymes, 927**
David C. Hohnadel
 Biochemical nature of enzymes, 929
 Enzyme nomenclature and classification, 934
 Measurement of enzymes, 938
 Clinical rationale for enzyme measurements, 949
 Significant factors affecting enzyme-reference values, 950
- 50 Isoenzymes, 953**
Lawrence M. Silverman
Vicki N. Daasch
John F. Chapman
 Definitions, 954
 Origin, 954
 Purpose or function, 954
 Tissue distribution of major isoenzyme families, 955
 Change in isoenzyme patterns secondary to pathological processes, 956
 Clinical significance of specific isoenzymes, 957
 Modes of isoenzyme analysis, 960
- 51 Therapeutic drug monitoring (TDM), 962**
Wolfgang Ritschel
 Fate of drug and need for therapeutic drug monitoring, 964
 Dosage regimens used in achieving therapeutic target concentration, 970
 Pharmacokinetics, 973
 Application of pharmacokinetics to TDM, 977
- 52 Interferences in spectral analysis, 983**
Lawrence A. Kaplan
Amadeo J. Pesce
 Limitations of detectors, 984
 In vitro interferences, 986
 In vivo interferences, 992
Nathan Pickard
 Sample processing errors, 993
 Source-reference material, 994
- 53 Examination of urine, 996**
G. Berry Schumann
 Introduction and clinical utility of urinalysis, 998
 Specimen collection, 998
 Physical examination of urine, 1000
 Chemical examination of urine, 1003
 Microscopic examination of urine, 1008
 Urine cytology, 1027
 Calculi (lithiasis), 1027
 Urine findings in common renal and lower urinary tract diseases, 1028
- Quality control, 1028
 Coordinated approach to urinalysis, 1030
- 54 Carbohydrates and metabolites, 1032**
 Glucose, 1032
Lawrence A. Kaplan
 Ketones (ketone bodies), 1037
Lawrence A. Kaplan
 Lactic acid, 1040
Nancy Gau
- 55 Electrolytes, 1044**
 Anion gap, 1044
W. Gregory Miller
 Blood gases, 1045
John E. Sherwin
Berndt B. Bruegger
 Calcium, 1051
E. Christis Farrell
 Carbon dioxide, 1056
W. Gregory Miller
 Chloride, 1059
W. Gregory Miller
 Iron and iron-binding capacity, 1063
Gerardo Perrotta
 Magnesium, 1065
E. Christis Farrell
 Osmolality, 1070
Lawrence A. Kaplan
 Phosphorus, 1072
E. Christis Farrell
 Sodium and potassium, 1075
W. Gregory Miller
- 56 Enzymes, 1079**
 Acid phosphatase, 1079
Lenox B. Abbott
William C. Wenger
John A. Lott
 Acid phosphatase isoenzymes, 1084
John F. Chapman
Linda L. Woodard
Lawrence M. Silverman
 Alanine aminotransferase, 1088
Robert L. Murray
 Aldolase, 1090
Stephen Gendler
 Alkaline phosphatase, 1094
William C. Wenger
John A. Lott
 Alkaline phosphatase isoenzymes, 1098
John F. Chapman
Linda L. Woodard
Lawrence M. Silverman

- Amylase, 1101
Michael D.D. McNeely
- Aspartate aminotransferase, 1105
Robert L. Murray
- Cholinesterase, 1108
Mary Ellen King
- Creatine kinase, 1112
Lenox B. Abbott
John A. Lott
- Creatine kinase isoenzymes, 1116
John F. Chapman
Linda L. Woodard
Lawrence M. Silverman
- Gamma-glutamyl transferase, 1120
Stephen Gendler
- Lactate dehydrogenase, 1124
Amadeo J. Pesce
- Lactate dehydrogenase isoenzymes, 1127
John F. Chapman
Linda L. Woodard
Lawrence M. Silverman
- Lipase, 1130
Michael D.D. McNeely
- 57** Hormones and their metabolites, 1135
- Cortisol, 1135
Suman Patel
John A. Lott
- Estriol, 1140
Lawrence A. Kaplan
- Human chorionic gonadotropin, 1147
Lawrence A. Kaplan
- 5-Hydroxyindoleacetic acid, 1153
Arnold L. Schultz
- Insulin, 1157
Michael D.D. McNeely
- Thyroid-stimulating hormone, 1160
I-Wen Chen
Linda A. Heminger
- Thyroxine, 1165
I-Wen Chen
Matthew I. Sperling
- T₃ uptake, 1170
I-Wen Chen
Matthew I. Sperling
- Vanillylmandelic acid, 1173
Steven J. Soldin
- 58** Lipids, 1182
- Amniotic fluid phospholipids, 1182
Paul T. Russell
- Cholesterol, 1194
Herbert K. Naito
- High-density lipoprotein (HDL) cholesterol, 1207
Herbert K. Naito
- Lipoprotein electrophoresis, 1213
Herbert K. Naito
- Triglycerides, 1221
Herbert K. Naito
- 59** Nonprotein nitrogenous compounds, 1230
- Ammonia, 1230
Nancy Gau
- Bilirubin, 1234
John E. Sherwin
Ronald Overholte
- Bilirubin amniotic fluid, 1242
Paul T. Russell
- Creatinine, 1247
Robert L. Murray
- Phenylalanine, 1253
Helen K. Berry
- Urea, 1257
Lawrence A. Kaplan
- Uric acid, 1261
Arnold L. Schultz
- 60** Proteins, 1268
- Albumin, 1268
Stephen Gendler
- Bence Jones protein, 1273
Gayle Birkbeck
- Cerebrospinal fluid protein, 1276
Gayle Birkbeck
- Ferritin, 1279
Robert S. Franco
- Glycohemoglobin, 1281
Mary Ellen King
- Haptoglobin, 1284
Robert S. Franco
- Hemoglobin analysis, 1286
Gerardo Perrotta
- Hemoglobin F, 1294
Robert S. Franco
- Immunoelectrophoresis, 1297
Gayle Birkbeck
- Immunoglobulins, 1304
Gayle Birkbeck
- Serum protein electrophoresis, 1309
Suman Patel
John A. Lott
- Total serum protein, 1316
Anthony Koller
- Total urine protein, 1319
Anthony Koller
- Transferrin, 1325
Robert S. Franco

- 61 Toxicology and therapeutic drug monitoring (TDM), 1327
- Acetaminophen, 1327
Joseph Svirbely
 - Alcohol screen, 1332
Timothy J. Schroeder
 - Anticonvulsant drugs, 1336
Steven J. Soldin
 - Barbiturates, 1343
Amadeo J. Pesce
 - Bromides, 1349
Joseph Svirbely
 - Digoxin, 1352
I-Wen Chen
Linda A. Heminger
 - Drug screen, 1355
F. Michael Hassan
 - Gentamicin, 1365
Joseph R. DiPersio
 - Lead (plumbum), 1369
M. Wilson Tabor
 - Lithium, 1377
Robert L. Murray
 - Quinidine, 1380
Amadeo J. Pesce
 - Salicylate, 1382
Joseph Svirbely
 - Theophylline, 1387
Gordon L. Bills

- 62 Urine analysis, 1391
- Melanins, 1391
Arnold L. Schultz
 - Porphobilinogen, 1393
Michael D.D. McNeely
- 63 Vitamins, 1396
- B₁₂, 1396
I-Wen Chen
Matthew I. Sperling
Linda A. Heminger
 - Carotenes, 1400
Lawrence A. Kaplan
 - Folate assay, 1402
Michael D.D. McNeely

APPENDIXES

- A Buffer solutions, 1407
- B Preparation of buffer solutions, 1409
- C Concentrations of common acids and bases, 1412
- D Gases in common laboratory use—technical information, 1413
- E Major plasma proteins, 1416
- F Conversions between conventional and SI units, 1417
- G Conversions between conventional and SI units for specific analytes, 1418
- H Body surface area of adults—nomogram, 1420
- I Body surface area of children—nomogram, 1421
