|--------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Preface                                                                                                                                          | v   |
| Contributors                                                                                                                                     | vii |
| 1. Biochemistry of Blood Coagulation <i>Robert F. Baugh Cecil Hougie</i>                                                                         | 1   |
| 2. Activation and Interaction of Some Defence Systems<br><i>Helge Stormorken</i>                                                                 | 35  |
| 3. Diagnosis of Bleeding and Coagulation Disorders<br><i>E. J. Walter Bowie Charles A. Owen</i>                                                  | 59  |
| 4. Recent Advances in Fibrinolysis <i>John F. Davidson</i>                                                                                       | 91  |
| 5. The Natural Inhibitors of Coagulation: Antithrombin III,<br>Heparin Cofactor and Anti-Factor Xa <i>Janet L. Lane</i><br><i>Rosemary Biggs</i> | 123 |
| 6. Physiology of Factor VIII <i>A. L. Bloom</i>                                                                                                  | 141 |
| 7. Von Willebrand's Disease <i>Dominique Meyer</i>                                                                                               | 183 |
| 8. Classification of Congenital and Hereditary Disorders of Platelets<br><i>Orhan N. Ulutin</i>                                                  | 219 |
| 9. The Prothrombotic State <i>J. R. O'Brien</i>                                                                                                  | 241 |
| 10. Coagulation Abnormalities in Liver Disease <i>L. Poller</i>                                                                                  | 267 |
| 11. Disseminated Intravascular Coagulation <i>John D. Cash</i>                                                                                   | 293 |
| 12. Congenital and Acquired Dysfibrinogenaemia <i>M. Samama</i><br><i>Jeannette Soria Claudine Soria</i>                                         | 313 |
| 13. Heparin and its Current Therapeutic Role <i>George P. M. Crawford</i><br><i>A. S. Douglas</i>                                                | 337 |
| 14. Acute and Chronic Coagulation Disorders in Pregnancy<br><i>J. Bonnar</i>                                                                     | 363 |
| Index                                                                                                                                            | 379 |
