

TABLE OF CONTENTS

	Page
I. INTRODUCTION	1
The scope of the manual	1
Planning for better nutrition	3
General factors affecting human nutrition in the Region	4
Geographical and agricultural factors	4
Socio-economic factors	5
Conclusion	7
II. THE PRINCIPAL FOODS USED IN THE REGION	8
Foods which are primarily sources of energy	9
Rice	9
Maize	13
Sorghum and millet; wheat	14
Sweet potato	15
Taro; yam	16
Potato	17
Cassava	17
Banana and plantain	18
Sugar; sago	19
Coconut	20
Breadfruit and jackfruit; oils and fats	21
Alcohol	22
Foods which are primarily protein sources	22
Milk	23
Meat; eggs	30
Fish	31
Other animals; soybean	32
Green gram	33
Peanut; other dried beans and peas	34
Nuts	35

CONTENTS

	Page
Foods which are primarily sources of minerals and vitamins	36
Green leafy vegetables	37
Roots; vegetable fruits	38
Stalk; flowers; seaweeds; fruits	39
Extras	40
III. THE PRINCIPAL NUTRITIONAL DISORDERS IN THE REGION	
Protein-calorie deficiency and growth retardation ..	41
Introduction	41
Clinical features	58
Causes, epidemiology and prevention	61
Treatment	63
Vitamin A deficiency	67
Clinical features	67
Causes, epidemiology and prevention	69
Beriberi	71
Introduction	71
Clinical features and epidemiology	72
Prevention	73
Other vitamin deficiencies	75
Riboflavin	75
Pellagra	75
Scurvy	76
Rickets	77
Vitamin K	78
Anaemia	78
Endemic goitre	82
Dental diseases	84
Nutrition, infection and mortality	86
Obesity	88

	Page
IV. NUTRITION OF VULNERABLE GROUPS	92
Infants and toddlers	92
Nutritional status at birth	92
Normal and retarded development	93
Breastfeeding	99
Artificial feeding	102
Supplementary feeding of infants	103
Special problems	114
Toddlers	114
School age	118
Normal and retarded development	118
Food supply and shortages	119
Nutrition and associated conditions	121
Vulnerable adult groups	121
Pregnant women	121
Lactating women	123
The elderly and destitute	127
V. NUTRITION SURVEYS	128
Orientation	128
Training	130
Ecological factors	131
Food availability and production	131
Food patterns and consumption	131
Environmental hygiene and conditioning infections	135
Socio-economic and cultural influences	135
Health and other services	136
Surveys of nutritional status	137
General organization	137
Clinical examination	138
Anthropometry	142
Laboratory	148
Reporting	151

CONTENTS

	Page
VI. NUTRITION EDUCATION AND SUPPLEMENTARY FEEDING	152
Orientation	152
Health channels	152
Other channels	156
Methods	157
Planning	157
Community education and community development	158
Implementation	159
Techniques	160
Some instructional aids	161
How to make a food demonstration	166
Supplementary feeding	167
Orientation	167
School feeding	168
Nutrition centres for infants and toddlers	170
VII. FOOD HYGIENE AND STANDARDS	179
Food hygiene	179
Orientation	179
Some hygiene hazards of certain foodstuffs	182
Some food handling hazards	184
Hygiene in the home	187
Organization and legislation	188
Personnel	189
Legislation	189
Fieldwork	189
Food standards	192
Expert committees	192
Codex Alimentarius Commission	192
Food enrichment and food technology	194

	Page
VIII. ADMINISTRATION, CO-ORDINATION AND TRAINING	195
Administration	195
Co-ordination	195
Training on food and nutrition	198
Basic training	198
Training for applied nutrition programmes....	199
Higher-level training	200
IX. APPLIED NUTRITION AND INTERNATIONAL AGENCIES	201
Applied nutrition programmes	201
International agencies	202

ANNEXES

I. FOOD COMPOSITION TABLES	206
Introduction	206
Specific nutrients and related items	207
“Edible portion” (E.P.) and “as purchased” (A.P.)	208
Cooking losses and changes	209
II. NUTRITIONAL REQUIREMENTS	221
General comments	221
Energy	222
Protein	227
Vitamin A	240
Vitamin B complex	242

CONTENTS

	Page
Ascorbic acid; iron	244
Calcium	246
III. SAMPLE SURVEY FORMS	249
General infant feeding and weaning practices	249
Special feeding practices of mothers and infants	252
Household survey	256
Community survey	259
School survey	264
Nutrition centre examination form	273
IV. SOME ANTHROPOMETRIC INDICATORS OF NUTRITIONAL STATUS	275
V. MORTALITY DATA IN THE COMPARATIVE ASSESSMENT OF COMMUNITY NUTRITIONAL STATUS	295
VI. FOOD FOR INFANTS — a sample pamphlet	301
VII. RECIPES	309
A. for infants and toddlers	309
B. for schoolchildren	321
C. for leafy greens	338
VIII. SOUTH PACIFIC ISLAND DIETS	342
REFERENCES	356-378

TABLES IN MAIN TEXT

3.1	Principal features of protein-calorie deficiency	42
3.2	Haemoglobin values below which anaemia can be considered to exist, and associated haematological values	79
3.3	Changes in prevalence of dental decay in areas of American Samoa	85
4.1	Mean weights of children in the Western Pacific Region	97
4.2	Normal pattern of eruption of primary dentition	98
4.3	Normal motor, behavioural and mental development	99
4.4	Amounts of foodstuffs required for a balanced diet	116
5.1	Feeding of young children in Sierra Leone village	133
5.2	Compilation of clinical survey data	140
5.3	Biochemical tests applicable to nutrition surveys	149
7.1	Classification of food-borne illnesses	180
7.2	Food-borne diseases	181
8.1	Functions of a nutrition unit	196

TABLES IN ANNEXES

A.1.1	Data used for calculating energy values of foods or food groups	211
A.1.2	Factors used for calculating the protein content from the nitrogen content of the foods	212
A.1.3	Thiamine and ascorbic acid; suggested percentage losses in cooking	212
A.1.4-8	Food composition tables	213-219

CONTENTS

A.1.9	Summary of nutrients supplied by principal foods (per 100 g)	220
A.2.1	Recommended calorie allowances	225
A.2.2	Calorie allowance adjustments for different activity levels	226
A.2.3	Calorie allowance adjustments for age of adults	226
A.2.4	Reference protein requirements of children and adults	228
A.2.5	Comparison of the protein values of some human diets as determined by rat assay and as calculated from food tables	234
A.2.6	Protein values of some simplified diets in the Western Pacific Region	235
A.2.7	Whole egg amino acid pattern	238
A.2.8	Chemical score and N.P.U. of selected proteins	238
A.2.9	Recommended daily intake of vitamin A at various ages	241
A.2.10	Recommended daily intakes of thiamine, riboflavin and niacin for children and reference adults	243
A.2.11	Recommended daily intakes of vitamin B for adults of different body weight	244
A.2.12	Recommended daily intakes of ascorbic acid, vitamin D, vitamin B ₁₂ and folate . . .	245
A.2.13	Recommended daily intakes of iron	246
A.2.14	Practical allowances for calcium	246
A.2.15	Summary of recommended daily intakes	247
A.4.1-2	Weight for Age	278-279
A.4.3	Length for Age	280
A.4.4	Height for Age	281
A.4.5	Skinfold Thickness	282
A.4.6	Arm Circumference	283

A.4.7	Head and Chest Circumference	284
A.4.8	Conversion of pounds to kilograms	293
A.4.9	Conversion of inches to centimeters	294
A.5.1	Age-specific mortality rates among toddlers and one-year-olds, based on registered deaths	295
A.5.2	Deaths among toddlers and one-year-olds as % of all registered deaths	296
A.5.3	Vital statistics indices of nutritional status	296
A.5.4	Percentage of all infant deaths occurring in monthly age groups	297
A.5.5	Deaths among toddlers and one-year-olds as percentage of all deaths (by mother interview)	299

FIGURES IN MAIN TEXT

1.1	Western Pacific Region of the World Health Organization	2
2.1	Proportion of nutrients in lightly milled rice remaining in highly milled rice	11
2.2	Protein content of foods — A. Per 100 g B. Per peso	24 25
2.3	Carotene content of foods	26
4.1	Mild and severe growth retardation	94
4.2	Typical growth curves (body weight) in well nourished and poorly nourished children	95
4.3	Average weights of children in different countries in the Western Pacific Region	96
4.4	Simple equipment for grinding cereals and legumes	106
6.1	Effectiveness of different types of learning experience	162
6.2	Use of flannelboard and chalkboard	163
6.3	Village nutrition station (A,B,C,D)	175

CONTENTS
FIGURES IN ANNEXES

A.2.1	Prediction of N Dp Cal %	232
A.2.2	Protein allowances in terms of N Dp Cal % ..	233
A.4.1	Average weights of infants and toddlers of different socio-economic groups	276
A.4.2	Child's record	285
A.4.3	Weight in kilograms	286
A.4.4	Schoolboy's weight record	287
A.4.5	Schoolboy's height record	288
A.4.6	Schoolchild's record	289

PLATES

Plate 1.	A malnourished family	43
	A. Protein-calorie malnutrition and vitamin A deficiency	
	B. Marasmus, xerosis and Bitôt spot	
	C. Kwashiorkor without dermatosis	
Plate 2.	Kwashiorkor	44
Plate 3.	Nutritional marasmus	44
Plate 4.	A. Depigmented skin, compared with normal child	44
	B. Moonface	
Plate 5.	A. Bitot's spot	45
	B. Keratomalacia (late, with necrosis of cornea)	
	C. Scleral pigmentation	
Plate 6.	A. Pinguecula	46
	B. Pterygium	
Plate 7.	A. Dyssebacea	47
	B. Conjunctival xerosis	
	C. Corneal xerosis and early keratomalacia	

Plate 8.	A. Keratomalacia involving whole cornea . . .	48
	B. Corneal vascularization with angular palpebritis	
	C. Angular stomatitis	
Plate 9.	A. Atrophic papillae	49
	B. Fissures of the tongue	
	C. Early mottling of the teeth	
	D. Late mottling of the upper incisors	
Plate 10.	A. Spongy bleeding gums	50
	B. Pyorrhoea	
	C. Acute pellagrous dermatosis on forearms and hands	
	D. Chronic pellagrous dermatosis on forearms	
Plate 11.	A. Cheilosis	51
	B. Hypertrophic papillae	
Plate 12.	A. Late mottling of teeth	52
	B. Dental attrition	
	C. Enamel hypoplasia	
Plate 13.	A. Profile photographs illustrating thyroid gradings	53
	B. Profile silhouettes illustrating thyroid gradings (from photographs)	
Plate 14.	A. Follicular hyperkeratosis	54
	B. Pellagrous dermatosis	
Plate 15.	A. Flaky-paint rash: forearms	55
	B. " " " : backs of legs	
	C. Bow-legs	
Plate 16.	A. Epiphyseal enlargement	56
	B. Rickety rosary	
Plate 17.	Degrees of protein-calorie deficiency in early childhood: Mild protein-calorie malnutrition	57
