

CONTENTS

Preface.	v
1. Elements of Physical Theory	1
1.1. Introduction	1
1.2. Geometrical Theory	2
1.3. The Law of Refraction: Geometrical Theory	5
1.4. Wave Theory and Wave Refraction	6
1.5. The Nature of Light	11
1.6. Classical Mechanics	15
1.7. Wave Mechanics	16
1.8. The Uncertainty Principle	19
1.9. Relativistic Wave Mechanics	20
2. Electrons in Electrostatic Fields	24
2.1. Introduction	24
2.2. The Electrostatic Field	25
2.3. The Laplace Equation	28
2.4. The Classical Electron Radius	30
2.5. Relativity	31
2.6. Determination of Potential Distribution	32
2.7. Ray Tracing	37
3. The Ideal Lens	42
3.1. Geometrical Concepts	42
3.2. Theorems for the Ideal Lens	43
3.3. Lens Equations	47
3.4. Angular Magnification	48
3.5. Virtual Images	49
3.6. Physical Systems	51
4. The Electrostatic Lens	54
4.1. Axially Symmetrical Electrostatic Fields	54
4.2. The Paraxial-ray Equation	55
4.3. General Solution of the Paraxial-ray Equation	57
4.4. Lens Action	57
4.5. Physical Similarity of Light and Electron Lenses	59
4.6. Some Properties of Electrostatic Lenses	60
4.7. The Thin Electrostatic Lens	64
4.8. Types of Electrostatic Lens	66

5. The Magnetic Lens	82
5.1. Magnetic Fields with Axial Symmetry	82
5.2. The Magnetic Circuit	85
5.3. The Paraxial-ray Equation	87
5.4. Qualitative Description of the Magnetic Lens	90
5.5. Some Properties of the Magnetic Lens.	91
5.6. The Thin Magnetic Lens	93
5.7. Thick Lens with Constant Field	94
5.8. The Bell-shaped Field	100
5.9. Aspects of Magnetic-lens Design	102
6. Aberrations and Diffraction	116
6.1. Aberrations	116
6.2. Diffraction	123
6.3. Spherical Aberration: Magnitudes	124
6.4. Chromatic Aberration: Magnitudes	128
6.5. Distortion: Projector Lens	131
7. The Electron Microscope	136
7.1. Simplified Optical System	136
7.2. Resolving Power	138
7.3. Depth of Field	142
7.4. Depth of Focus	144
7.5. The Electron Gun	146
7.6. The Condenser Lens	150
7.7. Coherence of Illumination.	153
7.8. The Objective Lens.	155
7.9. Projector Lenses	159
7.10. Alignment of Magnetic Instruments	162
7.11. Photographic Materials	172
7.12. Electrostatic Microscopes	177
7.13. Other Types of Microscope	181
8. Commercial Electron Microscopes.	201
8.1. Historical Notes	201
8.2. RCA Type EMU	205
8.3. RCA Small Microscopes	209
8.4. Philips Metalix	211
8.5. Metropolitan-Vickers EM3.	215
8.6. Siemens UM 100.	218
8.7. Electrostatic Instruments	220
9. Scattering Phenomena	226
9.1. Classical Collisions	226
9.2. Rutherford Scattering	228
9.3. Theories for Scattering	231
9.4. Image Intensities.	235
9.5. Diffraction by Crystals	247

CONTENTS

ix

9.6. Crystallographic Terminology	252
9.7. Electron Diffraction with the Electron Microscope	254
9.8. Energy Losses	260
10. Image Characteristics	266
10.1. Fresnel Diffraction	266
10.2. Contour Phenomena	268
10.3. Images from Bragg Reflections	275
10.4. Dark Field	279
10.5. Contrast	286
10.6. Alteration of Specimens	291
10.7. Effect of Beam Potential on Contrast	301
10.8. Lens Asymmetry	304
11. Methods in Electron Microscopy	308
11.1. Introduction	308
11.2. Vacuum Evaporation	309
11.3. Specimen Supports	312
11.4. Simple Specimen Preparation	318
11.5. Test Specimens	323
11.6. Shadow Casting	329
11.7. Surface Replicas	338
11.8. Shadow-transfer Techniques	348
11.9. Ultrathin Sectioning	352
11.10. Calibration	362
11.11. Liquid Suspensions	369
11.12. Powdered Materials	373
11.13. Fragmentation	378
11.14. Examination of Unstable Substances	379
11.15. Concluding Remarks	389
12. Examples from Applied Electron Microscopy	394
12.1. Scope of the Applications	394
12.2. Striated Muscle	403
12.3. Fibrous Proteins	407
12.4. Macromolecules	418
12.5. Large Molecules in Crystals	421
Appendix A. Examples of Stereoscopic Pairs	431
Appendix B. Answers to Some of the Problems.	433
Appendix C. Constants and Conversion Factors	434
Name Index	435
Subject Index	439
