	Preface	xiii
	Acknowledgements	xv
1	Introduction	1
	Some historical perspectives	4
	The classical precipitin reaction	5
	The basis of specificity	7
	The forces binding antigen to antibody, 9; Antibody affinity, 13; Avidity and the bonus effect of multivalent binding, 15; Specificity and cross-reactions, 16; The antibody site and antigen determinants, 17;	
	Summary	19
	Further reading	20
2	The immunoglobulins	23
	The basic structure of the immunoglobulins	23
	Variations in structure of the immunoglobulins	28
	Structural variation in relation to antibody specificity, 30;	
	Variability in structure unrelated to antibody specificity, 33	
	Comparison of immunoglobulin classes	38
	Immunoglobulin subclasses, 44; Other immunoglobulin variants, 45;	
	Summary	47
	Further reading	49
3	The immune response I—Fundamentals	51
	Two types of immune response	51
	Role of the small lymphocyte	51
	Primary response, 51; Secondary response—memory, 52	
	The thymus	53
	The Bursa of Fabricius	56
	Two populations of lymphocytes: T- and B-cells	57
	Identification of B- and T-lymphocytes, 57; Lymphocyte surface phenomena, 67	
	Cellular co-operation in the antibody response	68
	The role of macrophages, 68; Co-operation between T- and B-cells, 69; Relevance to antigenicity, 71	
	The cell-mediated immune response	74
	The two arms of the cell-mediated response, 77	

	The anatomical basis of the immune response	80
	Lymph node, 80; Spleen, 83; Unencapsulated lymphoid tissue, 83	
	Summary	85
	Further reading	86
4	The immune response II—Further aspects	87
	Synthesis of humoral antibody	87
	Detection of antibody-forming cells, 87; Protein synthesis, 89; Abnormal immunoglobulin synthesis, 90; Monoclonal antibodies, 91; Immunoglobulin classes, 92	
	Genetic control of the antibody response	94
	Genes affecting general responsiveness, 94; Immune response linked to immunoglobulin genes, 95; Immune response linked to the major histocompatibility complex, 95	
	Regulation of the immune response	98
	Suppressor T-cells, 100; Idiotypic networks, 102	
	Immunological tolerance	105
	At birth, 105; In the adult, 105; Mechanisms, 108	
	Ontogeny of the immune response	110
	Phylogeny of the immune response	116
	Summary	117
	Further reading	119
5	The immune response III—Theoretical aspects	121
	Instructive theory	121
	Selective theory	121
	Evidence for a selective theory	122
	Absence of antigen from plasma cells, 122; Unfolding experiments, 123; Amino acid sequence of antibodies, 123; Genetic studies, 123	
	Clonal selection model	123
	Evidence for clonal selection model	125
	One cell/one immunoglobulin, 125; Relation of surface antibody to future performance, 125	
	Validity of the clonal selection model	126
	Genetic theories of antibody variability	130
	Genes coding for antibody, 130; The generation of diversity, 133	
	Summary	135
	Further reading	136
6	Interaction of antigen and antibody	137
	Precipitation	137
	Precipitation in gels, 137; Single radial immunodiffusion (SRID), 139; Immunoelectrophoresis, 139; Quantification by nephelometry, 143	

Radioactive binding techniques	144
Measurement of antibody, 144; Measurement of antigen, 146;	
Non-radioactive labels, 147	
Immunohistochemistry	148
Immunofluorescence, 148; Other labelled antibody methods, 151	
Reactions with cell surface antigens	151
Binding of antibody, 151; Agglutination, 152; Opsonic (Fc) adherence, 156; Stimulation, 156; Cytotoxic reactions, 157	
✓ Complement	157
Nature of complement, 157; Activation of complement, 160; The complement sequence, 160; Role in defence, 164; Role in disease, 166; Complement deficiencies, 167; Genetics, 168	
Neutralization of biological activity	168
Summary	169
Further reading	170
7 Immunity to infection	173
Innate immunity	173
Preventing entry, 173; Counter-attack against the invaders, 174; The role of complement, 178	
Acquired immunity	179
Immunity to bacterial infection	180
Role of humoral antibody, 180; Role of cell-mediated immunity (CMI), 185	
Immunity to viral infection	188
Protection by serum antibody, 188; Local factors, 189; Cell-mediated immunity, 190	
Immunity to parasitic infections	193
Protozoa, 193; Helminths, 194	
Prophylaxis	196
Passively acquired immunity, 196; Active immunization, 197	
Primary immunodeficiency,	205
Secondary immunodeficiency	212
Summary	212
Further reading	216
8 Hypersensitivity	217
Type I—anaphylactic sensitivity, 217; Type II—antibody-dependent cytotoxic hypersensitivity, 217; Type III—complex-mediated hypersensitivity, 218; Type IV—cell-mediated (delayed-type) hypersensitivity, 220; Type V—stimulatory hypersensitivity, 220	
Type I—Anaphylactic sensitivity	221
Systemic anaphylaxis, 221; Mechanism of anaphylaxis, 221; Atopic allergy, 224	

Type II—Antibody-dependent cytotoxic hypersensitivity	226
Isoimmune reactions, 228; Autoimmune reactions, 230; Drug reactions, 232	
Type III—Complex-mediated hypersensitivity	232
Locally formed complexes, 234; Circulating complexes (serum sickness), 237; Detection of immune complex formation, 240; Treatment, 240	
Type IV—Cell-mediated (delayed-type) hypersensitivity	241
Cellular basis, 242; <i>In vitro</i> tests for cell-mediated hypersensitivity, 243; Tissue damage, 245	
Type V—Stimulatory hypersensitivity	246
Summary	248
Further reading	252

9	Transplantation	253
	Evidence that rejection is immunological	253
	Transplantation antigens	255
	Genetics, 255; The major histocompatibility complex in mice, 257; The major histocompatibility complex in man, 261	
	Rejection mechanisms	264
	Lymphocyte-mediated rejection, 264; The role of humoral antibody, 266	
	Prevention of graft rejection	269
	Tissue matching, 269; General immunosuppression, 270; Antigen-specific depression of allograft reactivity, 272	
	Clinical experience in grafting	275
	Biological significance of the major histocompatibility complex	277
	Polymorphism, 277; Immunological relationship of mother and fetus, 277; Recognition systems, 279; The cancer cell and the allograft reaction, 282; Relation of MHC to the complement system, 287; Association with disease, 287	
	Summary	289
	Further reading	292

10	Autoimmunity	293
	The spectrum of autoimmune diseases	293
	Autoantibodies in human disease	294
	Overlap of autoimmune disorders	300
	Genetic factors in autoimmune disease	301
	Aetiology of autoimmune response	304
	Provision of new carrier determinant, 306; Polyclonal activation, 309; Failure of immune regulation, 309	

Pathogenic mechanisms in autoimmune disease	311
Effects of humoral antibody, 311; Effects of complexes, 316; Cellular hypersensitivity, 321; Experimental models of auto- immune disease, 322	
Diagnostic value of autoantibody tests	326
Treatment of autoimmune disorders	326
Summary: comparison of organ-specific and non-organ-specific diseases	330
Further reading	331
Appendix	333
