

CONTENTS

- ‡ 1 Perinatal mortality and morbidity, 1
 - Low birth weight infants and mortality, 2
 - Perinatal death of full-size and full-term infants, 6
- * 2 The high-risk fetus and associated factors, 9
 - Social, cultural, and economic factors that influence perinatal morbidity and mortality, 12
 - Biologic factors, 13
 - History of reproductive wastage, 16
 - Nutrition and diet: prepregnant weight and gain in pregnancy, 16
 - Maternal smoking during pregnancy, 18
 - Paternal influences, 19
 - Miscellaneous factors, 19
- 3 Specific diseases and drugs affecting the fetus, 22
 - Specific diseases, 22
 - Iatrogenic complications in pregnancy, 33
- 4 Complications of pregnancy associated with early birth—reduction of perinatal casualty by extension of gestation, 39
 - Quelling of labor, 39
 - Multiple pregnancy, 40
 - Placenta previa, 43
 - Incompetent cervix, 48
 - Slight premature placental separation, 51
 - Circumvallate or circummarginate placenta (extrachorial placenta), 51
 - Thyroid dysfunction, 51
- ▷ 5 Complications of pregnancy—reduction of perinatal casualty by judicious, early delivery, 54
 - Premature separation of the placenta (abruptio placentae, ablatio placentae, solutio placentae, accidental hemorrhage), 54
 - Velamentous insertion of the cord (vasa previa), 59
 - Premature rupture of the membranes, 60
 - Toxemia of pregnancy, 63
 - Isoimmunization—erythroblastosis fetalis, 67

- Diabetes complicating pregnancy, 74
- Urinary tract infection, 78
- Hydramnios and oligohydramnios, 82
- “Placental insufficiency,” 83
- The oversized, or “large,” fetus, 85

6 Assessment of fetal growth, maturity, and health and antenatal care, 88

- Fetal growth, 88
- Estimation of fetal age and size, 91
- Assessment of fetal age and health, 96
- Prenatal detection of genetic defects, 102
- Antenatal care, 105

7 Fetal distress and its recognition, 113

- Diagnostic aids, 113
- Fetal heart rate monitoring and electrocardiographic patterns, 115
- Passage of meconium, 120
- Biochemical monitoring (fetal blood sampling), 122
- Overactivity of the fetus, 125
- Treatment of fetal distress from interpretation of FHR signs, 125

8 Labor and delivery in high-risk pregnancy, 129

- Special considerations in high-risk delivery, 129
- Management of labor and delivery of the high-risk fetus, 130
- Induction of labor, 136
- Analgesia and anesthesia, 139
- Fetal nursing, 147

9 Care of the high-risk infant at birth, 149

- Routine measures, 149
- Equipment needed in the delivery room, 151
- Drugs and solutions, 152
- Stage I: severely depressed infant—Apgar score 0 to 3, 152
- Infants with respiratory difficulty and/or continuing cyanosis after intubation, tracheal suction, and insufflation, 154
- Methods of intermittent positive-pressure insufflation, 155
- Additional delivery room care of the infant, 157
- Minimal physical examination for all infants, 158
- Respiratory and cardiovascular adjustments at birth, 159
- Summary of the transitional period, 163
- Transfer from a regional hospital (or home) to a neonatal care center, 165

10 Classification of infants at birth by weight and gestational age, 167

- Classification of infants into risk categories by birth weight and gestational age, 169
- Procedures for infants in the three risk zones, 172
- The growth retarded, or “small-for-dates,” neonate, 174
- Overgrown, or “large-for-dates,” infants, 181

- ✧ 11 Intensive care of the high-risk neonate, 183
 - Physician care, 185
 - Nursing responsibility, 191
 - Feeding, including parenteral techniques and nutritional requirements, 203
 - Laboratory procedures and techniques of obtaining specimens, 212
 - Growth and development of the premature infant during the nursery period, 216
- 12 Infections of the newborn, 221
 - Period of exposure, 221
 - Recognition of viral infection (fetal), 222
 - Diagnosis of viral infections, 222
 - Recognition of bacterial infection, 223
 - General infections, 223
 - Management, 224
 - Treatment of minor infections acquired after birth, 225
 - Prophylactic antibiotics, 225
 - Control of infection in the nursery, 227
- ⑬ System disorders and management, 229
 - Respiratory system, 229
 - Cardiovascular and hematologic system, 247
 - Central nervous system, 254
 - Gastrointestinal system, 261
 - Hepatic system, 268
 - Metabolic and renal systems (selected disorders), 274
 - Retrolental fibroplasia, 281
- 14 Preparation for discharge from the hospital, 282
 - Discharge from the nursery, 282
 - Responsibilities of the physician, 282
 - Responsibilities of the nursery nurse, 283
 - Responsibilities of the public health nurse, 283
 - Responsibilities of the social worker, 284
 - Special advice for the mother, 284
- ◊ 15 Sequelae of prematurity, 287
- ✧ 16 Prevention of prematurity and high-risk pregnancy, 293
 - General measures, 294
 - Social-medical measures, 294
 - Obstetric measures, 295
 - Prevention of the unwanted—"to be welcome and wellborn," 297
