Section I DIAGNOSIS AND MANAGEMENT OF THE HIGH-RISK FETUS AND NEONATE

1 What is a risk perinate? 1

- Definition of perinatal jeopardy, 2
- General factors inimical to pregnancy (which may require special guidance), 2
- Social, cultural, and economic factors that influence perinatal morbidity and mortality, 7

2 Standard prenatal care and identification of specific factors, 11

- Standard prenatal care, 11
- Factors relating to intrauterine jeopardy, 12
- Factors placing the newborn at increased jeopardy, 14
- Noxious habits, 15
- Paternal influences, 16
- Miscellaneous factors, 17
- Method of identification of specific risk factors, 17

3 Genetic and congenital defects, 22

- Early fetal development and growth, 22
- Mutagenesis and teratogenesis, 24
- Genetic and congenital defects, 24
- Chromosomal aberrations and genetic transmissions, 25
- Antenatal diagnosis, 28

4 Longitudinal assessment of fetal health: detection of risk factors, 30

- Fetal growth, 30
- Clinical parameters of pregnancy duration, 30
- Determination of fetal lie, presenting part, and position, 35
- Laboratory parameters of fetal growth, 35
- Laboratory parameters of fetal well-being, 38
- Determination of fetal death, 43

- 5 Fetal heart rate patterns as indicators of fetal well-being, 45**
 - Indications for electronic fetal monitoring, 45
 - Methods of electronic fetal monitoring, 46
 - The normal fetal heart rate, 46
 - Abnormalities of the normal fetal heart rate, 46
 - Periodic heart rate changes, 49
 - Interpretation of fetal heart rate patterns, 51
 - Pitfalls of electronic fetal monitoring, 51
 - Confirmation of fetal compromise (biochemical monitoring by fetal scalp blood sampling), 52
 - Treatment of fetal distress from interpretation of fetal heart rate signs, 54
 - Nonstress and stress testing, 54

- 6 Assessment of fetal health in labor, 58**
 - Clinical parameters, 58
 - Fetal nursing care, 65

- 7 Delivery of the fetus at risk, 67**
 - Which perinates are at risk? 67
 - Team care in the birth room, 67
 - General considerations for management of perinatal jeopardy, 69
 - Analgesia and anesthesia, 69
 - Cesarean section delivery, 75
 - Other operative delivery methods, 76
 - Induction of labor, 77
 - Specific risk situations, 81

- 8 Initial care of the infant in the birth room, 84**
 - Initial care of all infants, 84
 - Cardiovascular and respiratory changes at birth, 87

- 9 Resuscitation and stabilization of the depressed infant, 91**
 - Equipment and drugs needed in the delivery room, 91
 - Ventilation for the nonbreathing infant, 92
 - Continued apnea with assisted ventilation, 93
 - Circulatory and metabolic support, 93
 - Continued respiratory difficulty from birth, 93
 - Increasing cyanosis, 94

- 10 Techniques of resuscitation and stabilization, 95**
 - Laryngoscopy and endotracheal intubation, 95
 - Methods of assisted ventilation, 97
 - Umbilical vessel catheterization, 97
 - Techniques of catheterization, 98

- 11 Classification into risk categories at birth, 101**
 - What are the risk groups? 101
 - Assessment by weight and gestation, 101
 - Use of body measurements in evaluation of risk groups, 104

12 Infants at medium risk and their specific care, 107

- Infants who justify medium-risk care, 107
- Preterm infants (33 to 37 weeks of gestational age—1,500 to 2,750 gm), 109
- The postterm infant (42 weeks or more of gestational age), 109
- Large-for-date infants, 109
- Small-for-gestational-age (SGA) neonates, 110
- Hypoglycemia, 110
- Problems developing that may require transfer to regional center, 110

13 Transport of the high-risk perinate, 113

- Fetal transport, 113
- Neonatal transport, 113
- Training of transport nurses, 118

14 Intensive care of high-risk infants, 119

- Nursery facilities, 119
- Nursery regulations for control of infections, 121
- Temperature control, 121
- Humidification, 124
- Monitoring heart rate and respiration, 124
- Details of care, 127
- Parent-infant relationships, 130
- Criteria for discharge from the intensive care unit, 131
- Responsibilities of the community health nurse, 131
- Responsibilities of the social worker, 132
- Special advice for the mother, 132
- Responsibilities of the neonatal nurse, 133
- Procedures, 134

15 Parenteral administration of fluid and electrolytes, 137

- Glucose, water, electrolytes for short-term needs, 137
- Routes of infusion, 138
- Homeostatic imbalance, 138

16 Nutritional requirements and oral feeding of the low birth weight infant, 140

- Water balance and calories, 140
- Nutritional requirements, 142
- Feeding plans, 144
- Feeding techniques, 146
- Necrotizing enterocolitis, 148

17 Total parenteral nutrition, 151

- Candidates for parenteral nutrition, 151
- Sources of major nutrients, 151
- Techniques of care and use, 153
- Hazards in the use of parenteral nutrition, 154

x *Contents*

18 **Untimely termination of pregnancy, 157**

- Premature labor, 157
- Premature rupture of the membranes (PROM), 161
- Incompetent cervix, 164
- Prolonged pregnancy, 166

19 **Disproportionate fetouterine growth, 169**

- Growth-retarded fetus, 169
- Small-for-dates neonates, 170
- Overgrown, or "large" fetus, 173
- Hydramnios and oligohydramnios, 174

20 **Multiple pregnancy, 177**

- Incidence and association, 177
- Identification by clinical associations and observation, 177
- Diagnosis by laboratory procedures, 178
- Special care during pregnancy, 178
- Special considerations for the infant, 179
- Complications and sequelae, 179
- Placental examination, 181

21 **Hypertensive states in pregnancy, 182**

- Diagnosis, 182
- Laboratory studies, 184
- Treatment, 184
- General charting and laboratory studies, 187
- Complications, 187
- Prognosis, 188
- Prevention, 188
- Neonatal care, 188

22 **Placental bleeding, 190**

- Premature separation of the placenta (abruptio placentae, ablatio placentae, solutio placentae, accidental hemorrhage), 190
- Placenta previa, 194
- Circumvallate or circummarginate placenta (extrachorial placenta), 198

Section II **SERIOUS OBSTETRIC PROBLEMS AND THE PERINATE**

23 **Malpresentation and cord accidents, 199**

- Breech, 199
- Other malpresentations, 203
- Prolapse of the umbilical cord, 203
- Velamentous insertion of the cord and vasa previa, 204

24 **Diabetes mellitus, 206**

- Classification, 206
- The effect of pregnancy on diabetes mellitus, 206

The effects of diabetes on pregnancy, 207
Detection of diabetes, 208
Management, 208

25 Infections of the perinate, 211

Period of exposure, 211
Bacterial septicemia and other severe infections, 212
Minor infections, 214
Infections with group B beta-hemolytic streptococci, 214
Viral and other congenital infections, 215

Section III SPECIFIC PROBLEMS OF THE NEONATE

26 The very low birth weight baby (VLBW) (under 1,501 gm), 224

General considerations, 224
Approaches to prevention, 224
Specific problems of the small neonate, 225

27 Identification and management of respiratory problems, 227

Recognition of respiratory distress, 227
General management of respiratory distress, 228
Methods of ventilatory assistance, 233
General guidelines in mechanical ventilation, 236
Complications arising from oxygen therapy and mechanical ventilation, 238
Causes of respiratory distress in the neonate, 241

28 Neonatal hyperbilirubinemia and prevention of kernicterus, 250

Conditions associated with increased bilirubin levels, 250
When to investigate clinical jaundice, 251
Diagnostic approach to excessive jaundice and hyperbilirubinemia, 251
Erythroblastosis fetalis, 252
Kernicterus, 252
Phototherapy, 253
Exchange transfusion, 254

29 Cardiovascular problems, 257

Cyanosis, 257
Cardiac failure, 258
Shock, 259
Paroxysmal supraventricular tachycardia (PST or PAT), 260
Persistence of fetal circulation (PFC), 261
Patent ductus arteriosus (PDA), 261

30 Serious neurologic disorders, 263

Central nervous system (CNS) disorders, 263
Periventricular and intraventricular hemorrhage (IVH), 264
Hydrocephalus and microcephalus, 265

xii *Contents*

31 Hematologic problems, 268

- Anemia, 268
- Polycythemia and hyperviscosity syndrome, 269
- Bleeding or skin hemorrhage, 270

32 Metabolic problems, 272

- Hypoglycemia of the newborn, 272
- Hyperglycemia, 274
- Hyponatremia, 275
- Hypernatremia, 275
- Hypocalcemia, 276
- Hypomagnesemia, 276
- Hypermagnesemia, 277

33 Major congenital anomalies and development defects, 278

- Anomalies associated with respiratory distress at birth, 278
- Cyanosis and congenital heart disease, 280
- Intestinal obstruction, 281
- Abdominal wall defects, 284
- Multiple congenital defects, 285
- Metabolic, endocrine, and miscellaneous defects, 286
- Summary, 287

34 Perinatal mortality, 289

- Fetal mortality, 289
- Neonatal mortality, 289
- Low birth weight infants and mortality, 290
- Summary, 291

Section IV PERINATAL OUTCOME

35 Growth and development of the low birth weight infant: neurologic deficits, 293

- Neonatal growth and development, 293
- Postnatal growth and development, 294
- Neurologic and intellectual deficits, 296
- Child abuse, 297
- Longitudinal assessments, 298

36 Regionalization and guidelines for perinatal care, 300

- Levels of care, 300
- Small community or rural hospital (primary care), 301
- Larger community hospitals for continuing special care (intermediary care), 302
- Regional care centers (tertiary care), 304

Section V PREVENTION

37 Prevention of high-risk pregnancies, 306

Socioeconomic improvement, 307

Sociomedical measures, 307

Obstetric measures, 307

Prevention of the unwanted—"To be welcome and wellborn," 309

Appendixes

A Definitions and terms, 311

B Equipment for endotracheal intubation and umbilical vessel catheterization, 312

C Neonatal emergency transport equipment, 313

D Newborn transfer record, 315

E Neonatal transfer log, 317

F Respiratory flow sheet for all infants receiving oxygen or assisted ventilation, 318

G Drug dosages, 319

H Screening of all pregnancies, 321
