List of Figures	vii
List of Tables	vii
Acknowledgments	x
Introduction	xi
Chapter 1 Acceptance and Continuation Patterns	1
Sources of Data	1
Patterns of Acceptance	2
Patterns of Continuation	7
Appendix to Chapter 1 Sample Design, Response Rates, Sampling Errors, and Alternative Estimates of Continuation	29
The Sample Design	29
Response Rates	29
Adjustments for Nonresponse (Loss to Follow-Up)	32
Estimates of Sampling Errors	32
Alternative Continuation Rates	32
Chapter 2 Pregnancy and Fertility Rates	36
Introduction	36
Life Table Pregnancy Rates	36
Postacceptance Pregnancy and Fertility Rates	40
Appendix to Chapter 2 A Note Concerning the Number of Pregnancies and Surviving Children	58
Chapter 3 A Statistical Analysis of the Fertility Decline	60
Introduction	60
An Analysis of the Factors Determining Postacceptance Fertility	61
Limitations and Advantages of the Analytic Procedures	71
A Reconstruction of Preacceptance Fertility	71
The Magnitude of Possible Substitution Effects, or Estimates of the Net Effect of the Program	74
Estimation of the Number of Births Averted	76
Concluding Words	76
Appendix to Chapter 3 Equations and Methods Used to Reconstruct Pregnancy Rates	77
Part 1 Monthly Probability of Conception	77
Part 2 Equations and Assumptions	80
Equations Counting Expected Pregnancies	80
The Duration of Gestation and Amenorrhea	82
The Autocorrelation Assumption in the Estimation of Fetal Losses	83
Other Assumptions Used in the Analysis	86
Part 3 Sample Calculations	87
Method of Computation	87
Fertility Potential	87
Sterility	87
The "None Pregnant" Cohort Effect	87
Postpartum Amenorrhea	87
Program-Initiated Contraception	90
The Increase in Fertility Attributable to Method Failure	91
Additional Methods of Contraception	93
The Reduction in Fertility Ascribable to Fetal Loss	94
The Increase in Pregnancy Rates Ascribable to Fetal Loss	95
Final Note	95
References	97

List of Figures

1.1	IUD and pill first-method continuation rates, by months since acceptance	24
2.1	Cumulative percentage of acceptors pregnant, by number of children and months since acceptance	37
2.2	Cumulative percentage of acceptors pregnant, by region and months since acceptance	37
2.3	Pre- and postacceptance pregnancy termination rates, by country	44

List of Tables

Chapter 1

1.1	Obstetric and abortion cases and contraceptive acceptance rates: Total program, for specified years	2
1.2	Obstetric and abortion cases and contraceptive acceptors in 11 countries in the Postpartum Program, March 1966–September 1969	2
1.3	Number and percentage distribution of acceptors by method adopted, by region and country, March 1966–September 1969, survey data	3
1.4	Number of acceptors and percentage distribution by method of contraception, by region and year, survey data	4
1.5	Acceptance rates for total Program by age, by number of living children, July–December 1972	5
1.6	Acceptance rates by country, by number of living children, 1970 and 1971	5
1.7	Number of acceptors and percentage distribution by number of living children, by region and country, March 1966–September 1969	6
1.8	Percentage distribution of acceptors by number of living children, by region and year	
1.9	Median age at acceptance by method, by region and country, March 1966–September 1969	8
1.10	Median age and percentage distribution of acceptors by age, by region and country, March 1966–September 1969, survey data	8
1.11	Rank correlations between obstetric and abortion case-loads and acceptance rates, for four countries, 1972	9
1.12	IUD first-method continuation rates for the total Program, by months, by region and country	11
1.13	IUD first-method continuation rates for the total Program by timing of acceptance, by number of living children	11
1.14	Year-to-year IUD continuation rates by timing of acceptance, by number of living children	12
1.15	IUD first-method continuation rates by age at acceptance, by region and ordinal month	12
1.16	Annual IUD continuation rates, by age at acceptance	12
1.17	Percentage of IUD acceptors continuing use for specified period by age, by number of living children at acceptance	14
1.18	Percentage of delayed IUD acceptors continuing use for specified period by age, by number of living children at acceptance	14
1.19	Raw and standardized IUD continuation rates by timing of acceptance, by number of living children at acceptance	15
1.20	IUD termination rates by reason for termination, by timing of acceptance and ordinal month	16

- 1.21 IUD termination rates 24 months after acceptance by reason for termination, by timing of acceptance and number of living children 17
- 1.22 International comparisons of IUD first-method continuation rates 18
- 1.23 IUD continuation rates for the Postpartum Program and other country programs, for five countries 19
- 1.24 Observed and standardized pill first-method continuation rates by month, by region 19
- 1.25 Pill first-method continuation rates by age at acceptance by ordinal month 21
- 1.26 Pill first-method continuation rates by number of living children at acceptance, by ordinal month 21
- 1.27 Percentage of pill acceptors continuing use for more than one year by age, by number of living children 21
- 1.28 Pill termination rates by reason for termination, by months since acceptance and region 21
- 1.29 Pill termination rates 24 months after acceptance by reason for termination, by number of living children 22
- 1.30 International comparisons of pill first-method continuation rates 23
- 1.31 Twelve-month first-method continuation rates for IUD and pill acceptors by number of living children at acceptance, by country 24
- 1.32 Twelve-month first-method continuation rates for IUD and pill acceptors by age at acceptance, by country 25
- 1.33 Twelve- and 24-month first-method continuation rates for IUD and pill acceptors by number of living children at acceptance, by desire for additional children 25
- 1.34 Observed and standardized 12-month continuation rates for all first methods, by region and country 26
- 1.35 First-method continuation rates by year of acceptance, by method and ordinal month 27
- 1.36 First-method continuation rates by year of acceptance, by region and ordinal month 27
- 1.37 All-contraception continuation rates by first method adopted at 12 and 24 months, by region and country 27

Appendix to Chapter 1

- 1.A Institutions sampled in the worldwide follow-up survey 30
- 1.B Percentage of women interviewed by method, date of acceptance, and number of living children, by region and country 31
- 1.C Percentage of women interviewed or with postacceptance clinic visits by method, date of acceptance, and number of living children, by region and country 33
- 1.D Percentage distribution of interviews completed and not completed by reason for nonresponse, by region and country 33
- 1.E Estimates of sampling errors of continuation rate by region, by ordinal month 34
- 1.F Estimated continuation rates for IUD acceptors using interview data only (I) and using interview plus clinic data (I + C) by months, by region and country 34
- 1.G Estimated continuation rates for pill acceptors using interview data only (I) and using interview plus clinic data (I+C) by month, by region and country 35

Chapter 2

- 2.1 Cumulative percentage of acceptors who became pregnant, by region, month after acceptance, and number of living children at acceptance (life table method) 38
- 2.2 Cumulative percentage of acceptors who became pregnant,

- by region, month after acceptance, and age at acceptance (life table method) 38
- 2.3 Cumulative percentage of acceptors who became pregnant, by region, month after acceptance, and initial method adopted (life table method) 39
- 2.4 Cumulative percentage of acceptors who became pregnant, by region, year of acceptance, and ordinal month after acceptance (life table method) 40
- 2.5 Pre- and postacceptance fertility and pregnancy rates per thousand for women who accepted at least two years before the interview date, by region and country 41
- 2.6 Fertility and pregnancy rates, by time before acceptance 42
- 2.7 Annual average preacceptance fertility and pregnancy rates per thousand for the total Program, regions, and individual countries, and for the total Program, by age at acceptance 43
- 2.8 Preacceptance fertility rates for pill and IUD acceptors, by country 44
- 2.9 Pre- and postacceptance fertility and pregnancy rates per thousand for women who accepted at least two years before the interview date, by region and by age at acceptance 45
- 2.10 Pre- and postacceptance fertility and pregnancy rates per thousand for women who accepted at least two years before the interview date, by region and by number of living children at acceptance 47
- 2.11 Pregnancy termination and fertility rates per thousand before and after the date of termination of the last preacceptance pregnancy, by duration of marriage at acceptance 48
- 2.12 Pre- and postacceptance fertility and pregnancy rates per thousand for women who accepted at least two years before the interview date, by region and by years of marriage at acceptance 49
- 2.13 Pre- and postacceptance pregnancy and fertility rates for prior contraceptive users and nonusers, by years of marriage at acceptance 50
- 2.14 Pregnancy termination and fertility rates per thousand before and after acceptance for women who accepted at least two years before the interview date, by prior use of contraceptives and by age at acceptance 51
- 2.15 Percentage of women who had used contraceptives before acceptance in the program, methods used, and characteristics of users 52
- 2.16 Pre- and postacceptance fertility and pregnancy rates, by region and by method adopted 53
- 2.17 Pre- and postacceptance fertility and pregnancy rates for women who accepted at least two years before the interview date, by age at acceptance and by method adopted 54
- 2.18 Pre- and postacceptance fertility and pregnancy rates for women who accepted at least two years before the interview date, by years of marriage at acceptance and by method adopted 55
- 2.19 Pre- and postacceptance fertility and pregnancy rates for women who accepted at least two years before the interview date, by number of living children at acceptance and by method adopted 56
- 2.20 Preacceptance fertility and pregnancy rates for IUD and pill acceptors, by age at acceptance 57
- 2.21 Preacceptance fertility and pregnancy rates for IUD and pill acceptors, by years of marriage at acceptance 57

Appendix to Chapter 2

- 2.A Mean number of pregnancies, live births, and surviving

children of acceptors as of the interview date, by region and country	59
2.B Percentage of children who died prior to the interview, by year of birth, region, and country	59

Chapter 3

3.1 Reconstructed and observed postacceptance fertility and pregnancy termination rates, by method and age (average annual rates in the three-year period following acceptance)	61
3.2 "Fertility potential" remaining after the effects of specific factors have been taken into account (average annual rates in the three-year period following acceptance)	62
3.3 Reduction in fertility from the preacceptance potential, by specific factors (average annual rates in the three-year period following acceptance)	63
3.4 Percentage of preacceptance fertility remaining after the effects of specific factors have been taken into account	64
3.5 Percentage change in fertility from the preacceptance potential resulting from specific factors	65
3.6 Percentage of women who accepted 24 or more months after their last pregnancy, by age at acceptance	65
3.7 Assumptions concerning sterility, by age at acceptance	66
3.8 Average annual fertility expectations, by proportion amenorrheic at acceptance	68
3.9 Expected residual fertility and fertility reduction, by method and age	68
3.10 Observed and reconstructed preacceptance fertility and pregnancy rates (for women with three years' postacceptance data)	72
3.11 Observed and reconstructed fertility rates, before acceptance and after discontinuation, for women with three years' postacceptance history and two years' postdiscontinuation experience (excludes women who experienced unplanned pregnancies)	73
3.12 Average annual fertility and pregnancy rates for the two-year period following the cessation of program contraception among women who used no other form of contraception	74
3.13 Estimates of fertility with partial or complete substitution of methods	75

Appendix to Chapter 3

3.A Monthly probability of conception from survey data on 1966 acceptors	78
3.B Monthly probability of conception from survey data on 1967 acceptors	79
3.C Expected number of births within three years of acceptance per thousand women discontinuing in a month, by duration of postpartum amenorrhea	81
3.D Expected number of fetal losses within three years of acceptance per thousand women discontinuing in a month	82
3.E Mean duration (in months) of lactation (L) and of amenorrhea (A), by region, age, and method adopted (for women who had a live birth immediately prior to acceptance)	83
3.F Mean duration (in months) of lactation (L) and of amenorrhea (A) by region, age, and method adopted (for women who had a live birth immediately prior to acceptance)	84
3.G Mean duration of amenorrhea (in months) by months of nursing, method, and age	85
3.H Percentage of women who did not nurse following a live birth, by age, region, and method	85
3.I Observed and simulated durations of amenorrhea (in months), by age	86

3.J Percentage of women accepting within three months of delivery, by age at acceptance	86
3.K Monthly percentage of early IUD and pill acceptors discontinuing: first method, by age	88
3.L Monthly percentage of IUD acceptors discontinuing: First method, by age	89
3.M Monthly percentage of pill acceptors discontinuing: First method, by age	91
3.N Monthly percentage of early IUD and pill acceptors discontinuing: All contraception, by age	92
3.O Monthly percentage of IUD acceptors discontinuing: All contraception, by age	93
3.P Monthly percentage of pill acceptors discontinuing: All contraception, by age	94
3.Q Weights used to obtain group totals for analysis, by age	95
