

CONTENTS

I. CYTOLOGICAL TECHNIQUES

A. PREPARATION OF TISSUES FOR MICROSCOPICAL EXAMINATION AND HISTOCHEMISTRY. <i>By J. R. BAKER</i>	1
i. INTRODUCTION	1
ii. METHODS REVEALING STRUCTURE	2
<i>a. Fresh material. b. Fixation. c. Embedding. d. Staining. e. Mounting. f. Demonstration of mitochondria and the Golgi apparatus.</i>	
iii. METHODS REVEALING CHEMICAL COMPOSITION	12
<i>a. Introduction. b. A proposed classification of histochemical methods. c. Validity of histochemical tests. d. Modern tendencies.</i>	
B. SPECIAL METHODS. <i>By F. K. SANDERS</i>	20
i. INTRODUCTION	20
ii. THE FROZEN-DEHYDRATION METHOD OF TISSUE PREPARATION	20
<i>a. Basic principles. b. Freezing. c. Dehydration. d. Applications.</i>	
iii. CENTRIFUGAL FRACTIONATION METHODS	24
<i>a. Basic principles. b. Nuclei. c. Mitochondria. d. Microsomes. e. Chromosomes. f. Other cell particulates.</i>	
iv. THE HISTOLOGICAL LOCALIZATION OF ENZYME ACTIVITY	29
<i>a. General. b. Alkaline phosphatase. c. Acid phosphatase. d. Specificity.</i>	
v. THE USE OF ENZYMES AS HISTOCHEMICAL REAGENTS	32
<i>a. General. b. Ribonuclease. c. Specificity.</i>	
vi. MICRO-DISSECTION	35
C. MICROSCOPY. <i>By R. BARER</i>	39
i. INTRODUCTION	39
ii. SOME GENERAL PRINCIPLES OF MICROSCOPY	39
<i>a. Numerical aperture and resolution. b. Lens aberrations. c. Chromatic aberration. d. Spherical aberration. e. Correction of aberrations. f. The condenser. g. Methods of illumination.</i>	
iii. METHODS OF MICROSCOPY	44
<i>a. Conventional microscopy. b. Phase-contrast microscopy. c. Interference microscopy. d. Fluorescence microscopy. e. The polarizing microscope. f. The reflecting microscope. g. The electron microscope. h. Conclusion. The future of microscopy.</i>	

II. PHYSICAL AND PHYSIOCHEMICAL STUDIES OF CELLS. *By*

J. F. DANIELLI	84
i. INTRODUCTION	84
ii. RADIATIONS	84
<i>a. Uses of radiations. b. Electron microscopy. c. X-rays. d. Radiations from isotopes. e. Mitogenetic radiations. f. Spectroscopy. g. Microfilms.</i>	

iii. MECHANICAL INVESTIGATIONS	95
<i>a.</i> Centrifugal force. <i>b.</i> Micro-dissection and micro-injection.	
<i>c.</i> Pressure. <i>d.</i> The measurement of volume changes.	
iv. HEAT AND ELECTRICAL INVESTIGATIONS	105
<i>a.</i> Measurements of heat production. <i>b.</i> Electrical resistance and capacity (impedance) studies. <i>c.</i> Potential measurements. <i>d.</i> Electrophoresis measurements. <i>e.</i> pH measurements.	
v. MODELS OF BIOLOGICAL SYSTEMS	112
<i>a.</i> Tactoids. <i>b.</i> Films and monolayers.	
III. THE MONOLAYER TECHNIQUE. <i>By</i> J. H. SCHULMAN	119
i. INTRODUCTION	119
ii. METHODS	119
iii. PROPERTIES OF MONOLAYERS	119
<i>a.</i> Electrical properties. <i>b.</i> Surface pressures. <i>c.</i> Surface viscosity. <i>d.</i> Multilayer formation.	
iv. THE STRUCTURE OF PROTEIN AND LIPO-PROTEIN FILMS	127
<i>a.</i> Protein films. <i>b.</i> Lipo-protein films.	
v. INTERACTIONS OF MONOLAYERS WITH SUBSTANCES INJECTED INTO THE UNDERLYING SOLUTION, AND THEIR BIOLOGICAL ANALOGIES	130
<i>a.</i> Penetration of lipid and protein monolayers. <i>b.</i> Polar group specificity. <i>c.</i> Non-polar specificity. <i>d.</i> Penetration of protein films. <i>e.</i> Adsorption on to protein monolayers. <i>f.</i> Cytolysis and agglutination. <i>g.</i> Induced permeability of cells by adsorption of long-chain compounds.	
vi. THE OIL/WATER INTERFACE	137
<i>a.</i> Crystal, micelle, swollen-micelle, emulsion. <i>b.</i> Micelle formation. <i>c.</i> Penetration and swelling of the monolayer lattices by polar and non-polar oils in soap micelles. <i>d.</i> Emulsion droplet formation from soap micelle.	
IV. THE CELL SURFACE AND CELL PHYSIOLOGY. <i>By</i> J. F. DANIELLI	150
i. INTRODUCTION	150
ii. STRUCTURE AND PHYSICAL PROPERTIES OF THE PLASMA MEMBRANE	150
<i>a.</i> Molecular structure. <i>b.</i> Thickness. <i>c.</i> Ionic character. <i>d.</i> Lysis. <i>e.</i> Surface tension and elastic properties. <i>f.</i> Wetting properties. <i>g.</i> Permeability. <i>h.</i> Ectoplasmic layer. <i>i.</i> Physiological response to a stimulus.	
iii. FERTILIZATION, ARTIFICIAL PARTHENOGENESIS, CELL DIVISION, AND PROTOPLASMIC STREAMING	175
V. NUCLEUS, CHROMOSOMES, AND GENES. <i>By</i> M. J. D. WHITE	183
i. INTRODUCTION	183
ii. THE NUCLEUS	184
iii. THE CHROMOSOMES	185
<i>a.</i> The structure of chromosomes as revealed by microscopy. <i>b.</i> The chemical composition of chromosomes. <i>c.</i> Heterochromatin and euchromatin. <i>d.</i> Spiral structure of chromosomes. <i>e.</i> Chromosome reproduction. <i>f.</i> Endopolyploidy. <i>g.</i> Salivary gland	

chromosomes. <i>h.</i> Structural rearrangements of chromosome parts. <i>i.</i> Position effects. <i>j.</i> Meiosis—Synapsis and crossing-over.	
iv. THE NATURE OF THE GENE	225
VI. MITOCHONDRIA AND THE GOLGI COMPLEX. <i>By</i> G. H. BOURNE	232
i. INTRODUCTION	232
ii. MITOCHONDRIA	232
<i>a.</i> General. <i>b.</i> Structure and composition of mitochondria. <i>c.</i> Function of mitochondria. <i>d.</i> Relation of mitochondria to the Golgi complex. <i>e.</i> Summary of mitochondria.	
iii. GOLGI COMPLEX	249
<i>a.</i> General. <i>b.</i> Structure and physical condition of the Golgi com- plex. <i>c.</i> Composition of the Golgi complex. <i>d.</i> Vitamin C and the Golgi complex. <i>e.</i> Alkaline phosphatase and the Golgi complex. <i>f.</i> Function of the Golgi complex.	
VII. MICRO-INCINERATION AND THE INORGANIC CONSTITU- ENTS OF CELLS. <i>By</i> E. S. HORNING	287
i. INTRODUCTION	287
ii. TECHNIQUE OF MICRO-INCINERATION	289
<i>a.</i> Methods of fixation. <i>b.</i> Micro-incineration.	
iii. THE IDENTIFICATION OF HEAT-RESISTANT MINERALS IN MICRO- INCINERATED SECTIONS	294
<i>a.</i> Optical differentiation. <i>b.</i> The electron microscope. <i>c.</i> Spectro- graphic analysis. <i>d.</i> Photo-electric method.	
iv. NORMAL CYTOLOGY	300
<i>a.</i> Blood. <i>b.</i> Cell division. <i>c.</i> Protozoa. <i>d.</i> Multinucleated cells. <i>e.</i> Tissue cultures. <i>f.</i> Nerve cells. <i>g.</i> Smooth and striated muscle. <i>h.</i> Mammary gland. <i>i.</i> The formation of the Avian egg-shell. <i>j.</i> Teeth. <i>k.</i> Embryonic tissues.	
v. PATHOLOGICAL CYTOLOGY	308
<i>a.</i> Arteriosclerosis. <i>b.</i> Anthracosis and silicosis. <i>c.</i> Cerebral lesions. <i>d.</i> Inclusion bodies. <i>e.</i> Neurodermatitis. <i>f.</i> Pemphigus lesions. <i>g.</i> Neoplastic growths.	
VIII. ENZYME SYSTEMS OF CELLS. <i>By</i> H. BLASCHKO and W. JACOB- SON. Revised by H. Blaschko and F. K. Sanders	322
i. GENE CONTROL OF ENZYME FORMATIONS	322
<i>a.</i> Micro-organisms. <i>b.</i> Metazoa.	
ii. NON-GENETIC CONTROL OF ENZYME FORMATION	327
<i>a.</i> Adaptation in micro-organisms. <i>b.</i> Enzyme equipment of somatic cells.	
iii. GENE-ENZYME RELATIONSHIP AND SPECIFICITY	329
iv. LOCATION AND EXTRACTION OF ENZYMES	331
v. ENZYMES WITH LYTIC ACTION	333
vi. RESPIRATION ENZYMES	334
vii. OTHER ENZYMES CONTAINING HEAVY METALS	339
<i>a.</i> Iron: α . Catalase, β . Peroxidase. <i>b.</i> Copper. <i>c.</i> Dopa oxidase. <i>d.</i> Zinc. Carbonic anhydrase.	

viii. HYDROLYSING ENZYMES	343
<i>a.</i> Carbohydrate-splitting enzymes. <i>b.</i> Lipolytic enzymes. <i>c.</i> Proteolytic enzymes. <i>d.</i> Urease. <i>e.</i> Arginase. <i>f.</i> Phosphatases. <i>g.</i> Cholinesterases.	
IX. PATHOLOGICAL ASPECTS OF CYTOLOGY. <i>By</i> R. J. LUDFORD.	373
i. INTRODUCTION	373
ii. REGRESSIVE CHANGES	373
<i>a.</i> The mitochondria. <i>b.</i> The ground cytoplasm. <i>c.</i> The sphere of central body. <i>d.</i> The Golgi apparatus. <i>e.</i> The nucleus.	
iii. CELLULAR HYPERACTIVITY	380
iv. INTERACTION BETWEEN MICRO-ORGANISMS AND CELLS	384
<i>a.</i> The action of bacteria on cells. <i>b.</i> The action of <i>rickettsiae</i> on cells. <i>c.</i> The action of viruses on cells: i. The nature of viruses; ii. Virus bodies; iii. Cytoplasmic inclusions; iv. Intraneuclear inclusions; v. Viruses and nucleic acid metabolism.	
v. CYTOLOGY OF CANCER	431
<i>a.</i> Malignant growth. <i>b.</i> Aetiology of malignant growths: i. Filterable tumours; ii. Tumours in the aetiology of which a virus or virus-like agent is involved; iii. Tumours in the aetiology of which no virus or virus-like agent has yet been discovered. <i>c.</i> Differences between malignant and embryonic cells. <i>d.</i> Variations in structure and functional activity of malignant cells. <i>e.</i> Mitotic abnormalities of malignant cells. <i>f.</i> Differences in the cytoplasm of normal and malignant cells. <i>g.</i> Nucleotides of malignant cells.	
X. HISTOGENESIS IN TISSUE CULTURE. <i>By</i> HONOR B. FELL	419
i. INTRODUCTION	419
ii. METHODS	420
iii. HISTOGENESIS	421
<i>a.</i> Connective tissue fibres. <i>b.</i> Skeletal tissue. <i>c.</i> Teeth. <i>d.</i> Skeletal muscle. <i>e.</i> Heart muscle. <i>f.</i> Smooth muscle. <i>g.</i> Blood. <i>h.</i> Connective tissue pigment cells. <i>i.</i> Skin. <i>j.</i> Hair. <i>k.</i> Thyroid. <i>l.</i> Pituitary. <i>m.</i> Kidney. <i>n.</i> Alimentary and respiratory tracts. <i>o.</i> Ovary. <i>p.</i> Testis. <i>q.</i> Eye. <i>r.</i> Ear. <i>s.</i> Nervous tissue.	
iv. FUTURE APPLICATIONS	439
XI. SOME ASPECTS OF EVOLUTIONARY CYTOLOGY. <i>By</i> E. N. WILLMER	444
i. INTRODUCTION	444
ii. EXAMPLES OF CYTOLOGICAL EVOLUTION	445
<i>a.</i> Cells of the pancreas. <i>b.</i> Cells of the retina. <i>c.</i> Cells of the urinogenital systems.	
iii. CONCLUSIONS	489
INDEX OF NAMES	494
INDEX OF SUBJECTS	500
