

# CONTENTS

## Chapter One

INTRODUCTION . . . . .	1
History of Cytology . . . . .	6
Discovery of the Cell. Cell Theory . . . . .	6
Protoplasm Theory . . . . .	9
Cytology and Heredity . . . . .	10
References . . . . .	11

## Chapter Two

CHEMICAL AND PHYSICOCHEMICAL ORGANIZATION OF THE CELL . . . . .	12
General Chemical Composition . . . . .	12
Water . . . . .	13
Macromolecules . . . . .	14
Amino Acids and Proteins . . . . .	15
Carbohydrates . . . . .	25
Mucopolysaccharides, Mucoproteins and Glycoproteins . . . . .	27
Nucleic Acids . . . . .	28
Lipids . . . . .	33
Inorganic Components of the Cell . . . . .	37
Physicochemical Organization of the Protoplasm . . . . .	40
Colloids . . . . .	40
References . . . . .	47

ix

**Chapter Three**

MORPHOLOGIC ORGANIZATION OF THE CELL. METHODS OF STUDY . . . . .	49
Optical Methods for the Study of Cells . . . . .	50
Methods for Increasing Contrast. Phase Microscopy . . . . .	52
Interference Microscopy . . . . .	54
Dark Field Microscopy . . . . .	57
Methods of Study of the Living Cell . . . . .	57
Tissue Culture . . . . .	57
Microsurgery . . . . .	59
General Morphology of the Living Cell . . . . .	60
Plasma Membrane and Extraneous Coats . . . . .	60
Cytoplasm . . . . .	61
The Nucleus . . . . .	65
General Morphology of the Fixed Cell . . . . .	66
Fixation . . . . .	67
General Structure of the Fixed Cell . . . . .	70
Shape and Size of the Cell . . . . .	73
References . . . . .	74

**Chapter Four**

CYTOCHEMICAL ORGANIZATION OF THE CELL. METHODS OF STUDY . . . . .	76
Histochemistry and Cytochemistry . . . . .	77
General Cytochemical Methods . . . . .	77
Microchemistry and Ultramicrochemistry . . . . .	80
Cytochemical and Histochemical Methods . . . . .	81
Cytochemistry of Proteins . . . . .	82
Cytochemistry of Enzymes . . . . .	85
Cytophysical Determinations . . . . .	88
X-ray Absorption Methods . . . . .	89
Microincineration (Spodography) . . . . .	90
Fluorescence Microscopy in Histochemistry . . . . .	90
Radioautography in Cytochemistry . . . . .	92
References . . . . .	97

**Chapter Five**

SUBMICROSCOPIC ORGANIZATION OR ULTRASTRUCTURE OF THE CELL. METHODS OF STUDY . . . . .	100
Molecular Biology . . . . .	101
Limits and Dimensions . . . . .	102
Methods of Study of Ultrastructure . . . . .	103
Polarization Microscopy . . . . .	104
X-ray Diffraction . . . . .	107
Electron Microscopy . . . . .	109

*CONTENTS*

**xi**

Methods of Study of Cells and Tissues under the Electron Microscope . . . . .	114
Submicroscopic Structures in Biologic Materials . . . . .	115
Corpuscular Components . . . . .	116
Globular-Fibrous Transformations . . . . .	117
Fibrous Structures in Cells and Tissues . . . . .	118
Membranous Structures in Cells . . . . .	119
References . . . . .	128

**Chapter Six**

GENERAL ORGANIZATION OF THE GROUND CYTOPLASM OF THE CELL AND THE GOLGI COMPLEX . . . . .	131
Ground Cytoplasm of Cultured Cells . . . . .	134
The Structure of the Cytoplasmic Vacuolar System in Thin Sections . . . . .	134
Functions of the Cytoplasmic Vacuolar System . . . . .	138
The Small Particulate Component of the Cytoplasm (RNP Granules; Ribosomes) . . . . .	141
The Basophilic Substance or Ergastoplasm . . . . .	142
The "Microsome Fraction": Biochemical Analysis of the Ground Cytoplasm . . . . .	143
Chemical Composition of Microsomes . . . . .	146
Cytologic Significance of the Microsomes . . . . .	147
Biochemistry and Function of the Microsome Com- ponents . . . . .	149
The Golgi Substance or Golgi Complex . . . . .	151
Vital and Supravital Observation . . . . .	152
Morphology . . . . .	153
Chemical Composition . . . . .	156
Submicroscopic Organization . . . . .	158
Function of the Golgi Substance . . . . .	161
Matrix of the Hyaloplasm; Structural Proteins . . . . .	165
References . . . . .	166

**Chapter Seven**

MORPHOLOGY AND FUNCTION OF MITOCHONDRIA . . . . .	169
Vital and Supravital Examination, Fixation and Staining	170
Morphology (Shape, Size, Distribution, Orientation, Number) . . . . .	171
Chemical Composition of Mitochondria . . . . .	173
Submicroscopic Organization . . . . .	176
Variations in Mitochondrial Fine Structure . . . . .	180
Macromolecular Organization and Function of Mito- chondria . . . . .	182
Biochemical Heterogeneity of Mitochondria. Lysosomes	184
Microbodies . . . . .	185

Origin of Mitochondria . . . . .	185
Physiologic Variations of Mitochondria . . . . .	186
Degeneration of Mitochondria . . . . .	192
Function of Mitochondria . . . . .	193
References . . . . .	196

**Chapter Eight**

GENERAL STRUCTURE OF THE PLANT CELL CHLOROPLASTS . . . . .	198
Cell Wall . . . . .	198
Plasmodesmata: Continuity of Cell Cytoplasm . . . . .	199
Ground Cytoplasm of the Plant Cell. Vacuolar System . . . . .	200
Golgi Complex—Dictiosomes . . . . .	201
Mitochondria . . . . .	204
Plastids: Chloroplasts . . . . .	204
Morphology . . . . .	206
Physicochemical Properties . . . . .	206
Chemical Composition of Chloroplasts . . . . .	207
Structure . . . . .	207
Function of Chloroplasts . . . . .	211
References . . . . .	211

**Chapter Nine**

PLASMA MEMBRANE AND CELL PERMEABILITY . . . . .	213
Plasma Membrane . . . . .	213
Structure of the Plasma Membrane: Theories . . . . .	215
Structure of the Envelope (Stroma) of the Erythrocyte . . . . .	218
Fine Structure of the Plasma Membrane . . . . .	223
Differentiations of the Cell Surface . . . . .	224
Mechanisms of Specific Association of Cells . . . . .	227
Osmotic Pressure and Plasma Membrane . . . . .	229
Cell Permeability . . . . .	231
Methods of Study . . . . .	232
Permeability to Molecules . . . . .	232
Permeability to Ions . . . . .	233
Penetration of Proteins . . . . .	237
Phagocytosis . . . . .	237
Pinocytosis . . . . .	240
References . . . . .	243

**Chapter Ten**

MORPHOLOGIC ORGANIZATION OF NUCLEUS AND CHROMOSOMES . . . . .	245
Morphology of the Nucleus (Constancy, Shape, Size, Number, Position) . . . . .	246

*CONTENTS*

**xiii**

General Structure of the Interphasic Nucleus . . . . .	248
Physicochemical Properties of the Nucleus . . . . .	251
Nuclear Membrane or Envelope . . . . .	252
Structure of the Nucleolus . . . . .	254
Chromosomes . . . . .	256
Morphology of Chromosomes . . . . .	257
Morphology of the Chromosomic Complex, Karyotype . . . . .	261
Chromosome Structure . . . . .	265
Polytene Chromosomes . . . . .	271
Lampbrush Chromosomes . . . . .	277
The Macromolecular Organization of Chromosomes . . . . .	278
Synaptonemal Complex or Meiotic Chromosomal Core . . . . .	282
References . . . . .	284

**Chapter Eleven**

CHEMICAL ORGANIZATION OF THE NUCLEUS . . . . .	286
Biochemical Studies . . . . .	286
<i>Nucleoproteins</i> . . . . .	287
Protamine and Histone . . . . .	288
Nonhistone Proteins . . . . .	289
Nuclear Enzymes . . . . .	290
Nucleic Acids . . . . .	291
Lipid and Other Nuclear Components . . . . .	291
Cytochemical Techniques for Nucleoproteins . . . . .	292
Feulgen Nuclear Reaction . . . . .	293
Cytophotometry Absorption Methods . . . . .	294
Enzyme Tests . . . . .	297
DNA Content of the Nucleus . . . . .	298
DNA Content and Nucleoprotein During the Cell Cycle . . . . .	302
Cellular Mechanism of DNA Synthesis . . . . .	305
Cytochemistry of the Nucleolus and RNA Content of the Nucleus . . . . .	308
Functional Significance of the Interphasic Nucleus . . . . .	310
Nucleus and RNA Synthesis . . . . .	312
References . . . . .	313

**Chapter Twelve**

GROWTH AND CELL DIVISION. MITOSIS AND MITOTIC APPARATUS . . . . .	316
Cell Growth . . . . .	318
Limitation of Cell Growth . . . . .	320
Mitosis . . . . .	321
Morphology of Mitosis . . . . .	321
Anaphasic Movements . . . . .	327
Duration of the Mitotic Cycle . . . . .	329
Cell Center and Mitotic Apparatus . . . . .	329

Centriole and Pericentriolar Structures . . . . .	331
Centrioles and Cilia . . . . .	333
Centrioles and Mitosis . . . . .	334
Mitotic Apparatus . . . . .	334
Isolation of the Mitotic Apparatus . . . . .	336
Biochemical Constitution of the Mitotic Apparatus . . . . .	336
The Mechanism of Cytokinesis . . . . .	339
References . . . . .	340

### Chapter Thirteen

CYTOGENETICS (PART I) . . . . .	341
Meiosis . . . . .	342
Analysis of Meiosis . . . . .	346
The Chromosomes as the Material Basis of Heredity . . . . .	353
Mendel's Laws . . . . .	353
Genotype and Phenotype . . . . .	355
Intermediate Heredity . . . . .	356
Principle or Law of Independent Recombination . . . . .	358
Linkage and Crossing Over . . . . .	359
Crossing Over and Chiasmata . . . . .	362
Cytologic Basis of Crossing Over . . . . .	364
Alteration of the Chromosomes and the Mechanism of Their Reorganization . . . . .	369
Mutation . . . . .	369
Deficiency or Deletion . . . . .	371
Duplication . . . . .	372
Translocation . . . . .	373
Variations in Chromosome Number . . . . .	380
Haploidy . . . . .	381
Polyploidy . . . . .	381
Endoploidy and "Somatic Reduction" . . . . .	387
Somatic Variation in Chromosome Number . . . . .	388
The Chromosome Number in Man . . . . .	389
Evolution of the Mechanism of Sex Determination . . . . .	391
The Equilibrium of the Genes and Sex Determination . . . . .	394
Rupture of Genic Equilibrium and Origin of Sexual Aberrations . . . . .	395
Gynandromorphs . . . . .	397
Sex Linked Inheritance . . . . .	398
Multiple Sex Chromosome Mechanisms . . . . .	399
Sex Chromatin . . . . .	399
References . . . . .	401

### Chapter Fourteen

CYTOGENETICS (PART II) . . . . .	404
Cytogenetics of Microorganisms . . . . .	404
Enzymatic Adaptation . . . . .	404

*CONTENTS*

xv

Hereditary Alterations . . . . .	405
Cytogenetic Effect of Radiation and Chemical Agents . . . . .	411
Radiation Effects . . . . .	411
<i>Action of Chemical Agents</i> . . . . .	419
Stimulating Agents. . . . .	423
Cytogenetics and Evolution . . . . .	423
References . . . . .	427

**Chapter Fifteen**

ENZYMES AND CELL METABOLISM . . . . .	429
Methods of Study . . . . .	432
Warburg's Manometric Method . . . . .	433
Micromanometric Method . . . . .	435
Ultramicroanalytical Methods and Some Results of Their Application . . . . .	437
Localization of Enzymes . . . . .	439
Topography of Enzymes in Tissue . . . . .	439
Intracellular Topography of Enzymes . . . . .	443
Enzymes and Cell Structure . . . . .	445
Cellular Oxidation and Cell Metabolism . . . . .	448
Aerobic and Anaerobic Glycolysis . . . . .	450
Krebs Cycle . . . . .	450
References . . . . .	454

**Chapter Sixteen**

CYTOLOGIC AND CYTOCHEMICAL ASPECTS OF CELLULAR ACTIVITY . . . . .	456
Cellular Motion . . . . .	457
Cyclosis . . . . .	457
Ameboid Motion . . . . .	458
Molecular Mechanisms of Ameboid Motion . . . . .	461
Ciliary Motion . . . . .	464
Cytologic and Cytochemical Changes in Cell Nutrition . . . . .	472
<i>Cellular Inclusions or Paraplasm</i> . . . . .	472
Mucoprotein Inclusions . . . . .	474
Lipid Inclusions. . . . .	475
Glycogen Inclusions . . . . .	477
Pigment . . . . .	481
Cytomorphologic Aspects of Cellular Secretion . . . . .	483
Secretory Cycle. . . . .	483
Significance of the Secretion Granules . . . . .	487
Submicroscopic Morphology of Secretion. . . . .	488
Kinetics and Biochemistry of Cell Secretion . . . . .	491
References . . . . .	493

**Chapter Seventeen**

DIFFERENTIATION AND SENESCENCE OF THE CELL . . . . .	495
Cellular Differentiation . . . . .	495
<i>Cytoplasmic Differentiation: Plasmagenes</i> . . . . .	497
Specific Differentiation of the Cytoplasm. . . . .	498
<i>Differentiations Adapted to Contraction and Conduction</i> <i>in Muscle</i> . . . . .	500
Myofibrils . . . . .	501
Sarcoplasmic Reticulum . . . . .	507
<i>Differentiations of the Nerve Cell</i> . . . . .	507
Fine Structure of the Axoplasm, Neurofibrillar Substance	509
Structure of the Synaptic Junction . . . . .	513
Senescence and Death of the Cell . . . . .	518
Renewal of Cell Populations . . . . .	519
Cytologic Changes in Senescence . . . . .	521
Cell Death . . . . .	525
Postmortem Modification of the Cell . . . . .	526
References . . . . .	528
 <b>Index</b> . . . . .	 531
