

# Contents

<b>1. INTRODUCTION . . . . .</b>	<b>1</b>
THE DESCRIPTIVE PERIOD, 2	
THE EXPERIMENTAL PERIOD, 3	
NEWER TOOLS OF CYTOLOGY, 5	
The electron microscope, 6. The x-ray microscope, 7. The phase-contrast microscope, 9. Spectrophotometers, 9.	
NEWER TECHNIQUES OF CYTOLOGY, 12	
THE GOAL OF CYTOLOGICAL INVESTIGATIONS, 12	
<b>2. THE GENERALIZED CELL . . . . .</b>	<b>14</b>
CELL WALLS, 18	
THE CYTOPLASM, 22	
MITOCHONDRIA, 27	
THE NUCLEUS, 33	
PLASTIDS, 35	
GOLGI MATERIAL, 41	
VACUOLES, 42	
THE CENTROSOME, 43	
<b>3. CELL DIVISION AND SYNGAMY . . . . .</b>	<b>46</b>
MITOSIS, 46	
Interphase, 48. Prophase, 49. Metaphase, 52. Anaphase, 56. Telophase, 56. Cytokinesis, 56. Time sequence of mitosis, 59. Significance of mitosis, 59.	
MEIOSIS, 62	
Leptonema, 64. Zygonema, 65. Pachynema, 65. Diplonema, 65. Diakinesis, 71. Metaphase, 71. Anaphase, 72. Telophase, 72. Second meiotic division, 72. Cytokinesis in meiotic cells, 73.	
REPRODUCTION, 73	
Reproduction in animals, 74. Reproduction in plants, 77.	
<b>4. THE FUNCTION OF THE CHROMOSOME . . . . .</b>	<b>82</b>
THE PHYSICAL BASIS OF MENDELIAN GENETICS, 82	
Mendel's first law of inheritance, 82. Mendel's second law of inheritance, 84.	
CYTOLOGICAL BASIS OF MENDELIAN INHERITANCE, 85	
Additional assumptions and proofs, 87.	
SEX LINKAGE, 90	
LINKAGE AND CROSSING OVER, 93	
Complete linkage, 94. Incomplete linkage, 95.	
CYTOLOGICAL BASIS OF CROSSING OVER, 96	

<b>4. THE FUNCTION OF THE CHROMOSOME (<i>Cont.</i>)</b>	
GENETIC MAPS, 98	
Limitation of linkage groups, 98. Linear order of the genes and map distances, 99. Interference, 104.	
CYTOLOGICAL PROOFS OF CROSSING OVER, 105	
Linear differentiation of the chromosome, 105. Cytological basis of complete linkage, 106. Cytological basis of crossing over, 106. Proof that crossing over occurs between two of the four chromatids, 108. Chiasmata and interference, 108.	
<b>5. CHROMOSOME STRUCTURE . . . . .</b>	<b>110</b>
GENERAL MORPHOLOGY OF THE CHROMOSOME, 110	
Chromosome shape, 110. Chromosome size, 113. Chromosome number, 117. Individuality of the chromosomes, 118.	
DETAILED MORPHOLOGY OF THE CHROMOSOME, 118	
The chromonemata, 118. The matrix, 121. The chromomeres, 123. The centromere, 125. Secondary constrictions, 131. The telomere, 134.	
EUCHROMATIN AND HETEROCHROMATIN, 135	
SPECIAL TYPES OF CHROMOSOMES, 138	
Lampbrush chromosomes, 138. Salivary gland chromosomes, 142. Supernumerary chromosomes, 149.	
<b>6. VARIATIONS IN CHROMOSOME STRUCTURE AND NUMBER . . . . .</b>	<b>153</b>
STRUCTURAL CHANGES, 154	
Deficiencies, 154. Duplications, 161. Inversions, 164. Translocations, 171.	
VARIATIONS IN CHROMOSOME NUMBER, 177	
Euploidy, 177. Polyploidy in animals, 187. Aneuploidy, 188.	
<b>7. CHROMOSOME MOVEMENT . . . . .</b>	<b>194</b>
CHROMOSOME REPRODUCTION, 195	
CHROMOSOME CONTRACTION, 196	
Changes in chromosome and chromonema lengths, 198. The coiling of chromosomes, 200.	
SYNAPSIS, 207	
CHIASMA TERMINALIZATION, 214	
OTHER PRE-ANAPHASE MOVEMENTS, 218	
ANAPHASE MOVEMENT, 231	
<b>8. CROSSING OVER AND CHIASMA FORMATION . . . . .</b>	<b>235</b>
ORIGIN OF CROSSOVER CHROMATIDS, 236	
POSITION OF CROSSING OVER, 238	
SISTER CHROMATID CROSSING OVER, 242	
FACTORS AFFECTING CROSSING OVER, 246	
Effect of sex, 247. Effect of age, 248. Effect of temperature, 250. Effect of centromere, 251. Effect of heterochromatin, 252. Interchromosomal effects, 252. Effect of aberrations, 256.	

<b>8. CROSSING OVER AND CHIASMA FORMATION (Cont.)</b>	
CROSSING OVER IN POLYPLOIDS, 264	
In the X-chromosome, 264. In the II and III chromosomes, 265. In $\overline{XX} X$ triploids, 265.	
CROSSING OVER BETWEEN X- AND Y-CHROMOSOMES, 267	
SOMATIC CROSSING OVER, 268	
UNEQUAL CROSSING OVER, 270	
TETRAD ANALYSIS IN NEUROSPORA, 272	
RECOMBINATION IN BACTERIA AND VIRUSES, 274	
THE MECHANISM OF CROSSING OVER, 283	
<b>9. VARIATIONS IN CHROMOSOME BEHAVIOR . . . . .</b>	<b>291</b>
SOMATIC SEGREGATION, 292	
Chimaeras, 292.	
ENDOMITOSIS AND SOMATIC REDUCTION, 295	
GENETIC CONTROL OF CELL DIVISION, 303	
Mitosis, 304. Meiosis, 306.	
MALE STERILITY, 312	
PREFERENTIAL SEGREGATION OF CHROMOSOMES, 313	
Non-random disjunction of sex chromosomes, 314. Segregation of chromosome IV in <i>Drosophila</i> , 318. Non-random disjunction due to chromosomal aberrations, 319. Preferential segregation in maize and rye, 323.	
CHROMOSOME DIMINUTION AND ELIMINATION, 328	
Cytogenetics of <i>Sciara</i> , 331. Cytology of the gall midges, 334.	
CYTOLOGY OF THE COCCIDS (COCCOIDEA-HOMOPTERA), 339	
Somatic mitosis, 339. Polar bodies in development, 347.	
<b>10. SPONTANEOUS AND INDUCED CHROMOSOMAL ABERRATIONS . . . . .</b>	<b>349</b>
SPONTANEOUS ABERRATIONS, 350	
Breakage-fusion-bridge cycle, 356. Behavior of telocentric chromosomes, 360.	
INDUCED CHROMOSOMAL ABERRATIONS, 361	
The effective radiations, 362. General effects of radiation on cells, 363. Structural changes, 367. Distribution of breaks, 373. Differential sensitivity among cells and organisms, 374. Quantitative results, 377. Modifying factors, 382. Breakage of chromosomes by chemicals, 391. Mechanism of induction of aberrations, 395.	
<b>11. THE CHEMISTRY OF NUCLEI AND CHROMOSOMES . . . . .</b>	<b>400</b>
THE TECHNIQUES, 401	
Staining reactions, 401. Photometric procedures, 403. Enzyme digestion, 405. Direct chemical analysis, 406.	
CHEMICAL CONSTITUENTS OF CHROMOSOMES, 406	
Desoxyribose nucleic acid, 407. Ribose nucleic acid, 411. Proteins, 412.	
THE CHROMOSOME IN CELL DIVISION, 414	
In interphase, 414. In mitosis, 415. In development, 417.	

<b>12. CHROMOSOMES AND GENES . . . . .</b>	<b>419</b>
DEFINITION OF A GENE, 419	
SIZE OF THE GENE, 426	
STABILITY OF THE GENE, 427	
GENE MUTATIONS AND CHROMOSOME ABERRATIONS, 434	
Temperature, 434. Aging, 434. Ultraviolet radiation, 435. X-rays, 435.	
Neutrons, 435. Combined radiations, 435. Chemicals, 436. Genic modifiers, 436.	
POSITION EFFECT, 437	
AC-Ds POSITION EFFECTS IN MAIZE, 440	
GENETIC EFFECT OF HETEROCHROMATIN, 445	
EVOLUTION OF THE GENE, 446	
<b>13. EVOLUTION OF THE KARYOTYPE . . . . .</b>	<b>448</b>
CHANGES IN BASIC NUMBER, 450	
CHANGES IN FORM AND RELATIVE SIZE OF CHROMOSOMES, 457	
<b>14. EVOLUTION OF SEX-DETERMINING MECHANISMS . . . . .</b>	<b>464</b>
THE XX-XY MECHANISM, 466	
VARIATIONS IN THE CHROMOSOMAL DETERMINATION OF SEX, 472	
<b>15. ROLE OF ABERRATIONS IN EVOLUTION . . . . .</b>	<b>477</b>
DEFICIENCIES, 479	
DUPLICATIONS, 480	
INVERSIONS, 485	
TRANSLOCATIONS, 493	
<b>16. POLYPLOIDY AND EVOLUTION . . . . .</b>	<b>500</b>
EFFECTS OF POLYPLOIDY ON STRUCTURE AND FUNCTION, 500	
DISTRIBUTION OF POLYPLOIDS, 503	
POLYPLOIDY AND SPECIATION, 510	
POLYPLOIDY IN ANIMALS, 515	
<b>17. APOMIXIS AND PARTHENOGENESIS . . . . .</b>	<b>518</b>
APOMIXIS IN PLANTS, 519	
PARTHENOGENESIS IN ANIMALS, 526	
<b>18. CONCLUDING STATEMENT . . . . .</b>	<b>533</b>
<b>REFERENCES . . . . .</b>	<b>536</b>
<b>INDEX . . . . .</b>	<b>583</b>
