1

THE BEGINNINGS OF MICROBIOLOGY 3

<i>The Discovery of the Microbial World,</i>	4	<i>in Transformations of Organic</i>	
<i>The Controversy over Spontaneous Genera-</i>		<i>Matter,</i>	19
<i>tion,</i>	8	<i>Discovery of the Role of Microorganisms</i>	
<i>Discovery of the Role of Microorganisms</i>		<i>in the Causation of Disease,</i>	23

2

THE PRINCIPLES AND PRACTICE OF PURE CULTURE METHODS 31

<i>Origin of the Belief in Pleomorphism,</i>	31	<i>Microorganisms as Geochemical Agents,</i>
		40

3

THE STRUCTURE AND EVOLUTION OF ORGANISMS 47

<i>The Cell,</i>	48	<i>Position of Microorganisms in the</i>	
<i>Major Divisions of the Living World,</i>	55	<i>Evolutionary Process,</i>	57

4

THE INTERNAL ORGANIZATION OF CELLS 65

<i>The Eucaryotic Cell,</i>	66	<i>The Evolutionary Significance of Eucaryotic</i>	
<i>The Procaryotic Cell,</i>	80	<i>and Procaryotic Cellular Structure,</i>	83

THE HIGHER PROTISTS: ALGAE AND PROTOZOA

95

*Interrelations between Algae, Protozoa,
and Fungi, 96*

The Eucaryotic Algae, 96

*Colorless Algae and the Origin of the
Protozoa, 105*

THE HIGHER PROTISTS: FUNGI AND SLIME MOLDS

113

The Primitive Fungi: Phycomycetes, 115

Ascomycetes and Basidiomycetes, 121

Slime Molds, 130

The Higher Protists: Summing Up, 135

THE LOWER PROTISTS: BLUE-GREEN ALGAE, MYXOBACTERIA, AND SPIROCHETES

139

The Range of Cell Size, 139

*The Nature of the Cell Wall in Lower
Protists, 141*

*Metabolic Patterns among Lower Protists,
142*

The Main Groups of Lower Protists, 144

*Lower Protists which Show Gliding
Motility, 145*

The Myxobacteria, 150

The Spirochetes, 155

THE LOWER PROTISTS: EUBACTERIA

163

*Important Structural Properties of
Eubacteria, 163*

The Stalked Eubacteria, 174

The Budding Eubacteria, 177

The Filamentous Eubacteria, 178

The Mycelial Eubacteria:

Actinomycetes, 178

*The Pleuropneumonia Group and
Bacterial L-Forms, 184*

*The Rickettsia Group and Other
Obligate Intracellular Parasites, 187*

THE VIRUSES

193

Discovery of Filterable Viruses, 193

The Bacteriophages, 195

General Properties of Viruses, 203

*The Differences between Viruses and
Organisms, 209*

The Origin of Viruses, 211

10

MICROBIAL METABOLISM: THE BIOSYNTHESIS OF
MACROMOLECULES 215*The Chemical Organization of Macro-
molecules, 216**The Macromolecular Components of Cells,
219**The Synthesis of Macromolecules:
Energy Requirements, 227**The Synthesis of Macromolecules:
Polymerization and Organization, 231*

11

MICROBIAL METABOLISM: THE GENERATION OF ATP
AND OF THE SUB-UNITS OF MACROMOLECULES 237*Biological Oxidations, 237**The Generation of ATP, 244**The Formation of the Sub-units of Macro-**molecules from Metabolic
Intermediates, 249**The Origin of Some Key Intermediates
in Metabolism, 252*

12

THE PRINCIPAL TYPES OF MICROBIAL METABOLISM 259

*Fermentation, 260**Respiration, 264**Anaerobic Respiration, 271**Photosynthesis, 273**Alternative Metabolic Pathways, 281**Energy Yields in Different Types of
Metabolism, 282*

13

MICROBIAL NUTRITION AND PHYSIOLOGY 285

*Principles of Nutrition, 285**Nutritional Categories and Interrelations,
291**Enzymatic Composition in Relation to
Nutrition, 295**Absorption of Nutrients, 299*

14

PROBLEMS OF BACTERIAL CULTIVATION 307

*Synthetic and Complex Media, 307**Conditions of Cultivation, 308**Selective Media, 315*

THE GROWTH AND DEATH OF BACTERIA

321

Definition and Measurement of Growth and Death, 321

Bacterial Growth, 324

The Growth Curve, 329

The Death of Bacteria, 334

Colony Formation, 338

THE EFFECT OF ENVIRONMENT ON GROWTH AND DEATH

345

The Influence of the Chemical Environment, 345

The Influence of the Physical Environment, 354

The Interplay of Environmental Factors, 362

RELATIONS BETWEEN STRUCTURE AND FUNCTION IN THE EUBACTERIAL CELL

365

General Construction of the Eubacterial Cell, 365

The Cell Wall, 369

The Cytoplasmic Region, 375

Cellular Reserve Materials, 377

The Nucleus, 384

The Machinery and Mechanism of Eubacterial Movement, 387

Capsules and Slime Layers, 392

The Formation of Endospores, 395

IMPORTANT GROUPS OF UNICELLULAR EUBACTERIA

407

Biological Classification: Artificial and Natural Systems, 408

The Photosynthetic Eubacteria, 412

The Chemolithotrophic Bacteria, 416

The Chemoorganotrophic Pseudomonads, 419

Chemoorganotrophic Vibrios and Spirilla, 422

The Acetic Acid Bacteria, 423

The Azotobacter Group, 424

The Coliform Bacteria, 424

The Lactic Acid Bacteria, 432

The Propionic Acid Bacteria and Corynebacteria, 438

The Spore-formers, 442

The Methane-forming Bacteria, 447

ENRICHMENT CULTURES FOR SPECIALIZED GROUPS OF BACTERIA

451

Synthetic Enrichment Media, 452

The Use of Complex Media for Enrichment, 457

20

MICROBIAL GENETICS: MUTATION

463

The Physical Basis of Heredity and Variation, 463

Bacterial Mutation, 467

Genetic Change in Microbial Populations, 479

Adaptation, 488

21

MICROBIAL GENETICS: RECOMBINATION

491

Recombination in Bacteria, 491

Transformation, 492

Conjugation, 495

Transduction by Bacteriophage, 505

Recombination in Bacterial Viruses, 511

22

MICROBIAL GENETICS: GENE STRUCTURE AND FUNCTION

515

The Mechanism of Mutation in Terms of DNA Structure, 515

Gene-enzyme Relationships, 516

Alteration in Protein as a Result of Gene Mutation, 521

Mutation and Recombination within a Functional Locus, 524

23

MICROORGANISMS AS GEOCHEMICAL AGENTS

527

The Biosphere and Its Activities, 527

The Fitness of Microorganisms as Agents of Geochemical Change, 528

The Cycle of Matter, 530

The Cycles of Carbon and Oxygen, 531

The Nitrogen Cycle, 535

The Sulfur Cycle, 540

Integration of the Cycles, 543

The Cycles of Matter through Geological Time, 543

Man and the Cycle of Matter, 545

24

SYMBIOTIC RELATIONS OF MICROORGANISMS TO PLANTS AND ANIMALS

549

The Ruminant Symbiosis, 550

Leguminous Plants and Root Nodule

Bacteria, 552

Parasitic Relationships, 560

25

MECHANISMS OF CONSTITUTIVE HOST RESISTANCE
