

CONTENTS

THE GENERAL BIOLOGY OF BACTERIA AND THE GENERAL METHODS OF BACTERIOLOGY

CHAPTER	PAGE
I. OUTLINE OF THE HISTORY AND SCOPE OF BACTERIOLOGY	1
II. GENERAL MORPHOLOGY AND REPRODUCTION OF BACTERIA	21
Morphology of the Bacterial Cell	22
Organs of Locomotion	25
Cell Nucleus and Cytoplasmic Inclusions	28
Bacterial Spores	28
Reproduction of Bacteria	31
Morphology of Colonies of Bacteria	34
III. NUTRITION OF BACTERIA	39
Thermodynamic Basis of Nutrition	40
Chemical Basis of Nutrition	41
Nutrition of E. Coli	42
Types of Bacterial Nutrition	43
Inorganic Requirements	45
Media Making	46
IV. METABOLISM OF BACTERIA	49
Respiration	49
Warburg-Keilin System	52
Nitrogen Metabolism	53
V. GROWTH OF BACTERIA	56
The Growth Curve	56
Variables Affecting Growth	58
Variation and Heredity	58
Applications: Microbiological Assay	60
VI. THE EFFECTS OF PHYSICAL AGENTS ON BACTERIA	63
Temperature	63
Sterilization by Heating	66
Desiccation	71
Radiant Energy	71
Electric Current	73
Pressure	74
Agitation and Trituration	74

CHAPTER	PAGE
VII. CHEMICAL AGENTS, SULFONAMIDES, ANTIBIOTICS	77
Chemical Agents	77
General Effects of Chemical Environment	77
Theoretical Considerations of Disinfection	78
Data on Antiseptics and Disinfectants	83
The Varying Responses of Gram-Positive and Gram-Negative Bacteria	90
Sulfonamides	91
Antibiotics: Penicillin and Streptomycin	94
Resistance to Chemotherapeutic Agents	99
VIII. BACTERIAL ECOLOGY AND FLORA OF THE NORMAL BODY	111
Bacterial Ecology	111
Habitat	111
Synergism	113
Commensalism	113
Symbiosis	114
Parasitism	114
Bacterial Flora of the Normal Human Body	115
On the Normal Skin	116
In the Normal Mouth and Pharynx	116
In the Nose and Accessory Sinuses	118
Bacteria in the Tissues	119
Bacteriology of the Intestinal Tract	119
IX. VARIABILITY OF BACTERIA	125
Types of Dissociation	126
Methods for Forcing Dissociation	128
Nature of Dissociation	129
Transmutation of Bacteria	132
X. CLASSIFICATION OF BACTERIA	135

INFECTION AND IMMUNITY

XI. PATHOGENICITY AND VIRULENCE	139
Toxin Production	140
Capsules	141
Leucocidin	141
Spreading Factor or Hyaluronidase	142
Fibrinolysin	143
Coagulase	143
Portal of Entry	143
Dosage	144
Innate or Natural Immunity	145
General Factors in Innate Immunity	145

CONTENTS

xiii

CHAPTER	PAGE
XI. PATHOGENICITY AND VIRULENCE (<i>Continued</i>)	
Species Immunity	146
Racial Immunity	146
Individual Immunity	147
XII. DEFENSIVE FACTORS OF THE ANIMAL BODY	148
Classification of Immunity	150
XIII. ANTIGENS AND ANTIBODIES	153
Antigens	153
Molecular Weight	154
Chemical Structure	154
Route of Inoculation	155
Antigens of Importance to Man	156
Other Antigens	157
Antibodies	157
Mechanism of Antibody Formation	159
Site of Antibody Formation	160
Extent and Rate of Antibody Production	161
Disappearance of Antibody	163
Types of Antibodies	164
XIV. TOXINS AND ANTITOXINS	166
Diphtheria Toxin and Antitoxin	167
Diphtheria Toxin	167
Diphtheria Antitoxin	168
The Diphtheria Toxin-Antitoxin Reaction	169
Minimum Requirements of Diphtheria Biologicals	173
Tetanus Toxin and Antitoxin	175
Units of Tetanus Toxin and Antitoxin	176
The Flocculation Test	177
Minimum Requirements of Tetanus Biologicals	177
Combined Toxoids	177
Other Toxins and Antitoxins	177
XV. SENSITIZING ANTIBODIES	179
Antibacterial Antibodies	180
The Precipitin Reaction	181
Factors Affecting the Formation of the Precipitate	183
Titration of Precipitins	183
The Agglutination Reaction	189
Factors Affecting the Agglutination Reaction	191
Antigenic Analysis by Agglutination	192
Agglutinin Absorption	195
Normal Agglutinins	196
Complement-Fixation	197
Complement	197

CHAPTER	PAGE
XV. SENSITIZING ANTIBODIES (<i>Continued</i>)	
Complement-Fixation	198
The Hemolytic System	199
Titration of Complement	200
The Complement-Fixation Test	201
Bacteriolysins and Bacteriocidins	204
Phagocytosis	204
Opsonins and Bacteriotropins	205
Serologic Tests for Syphilis	208
Isoagglutinins	209
XVI. HYPERSENSITIVENESS	213
Hypersensitivity in Animals	214
Anaphylaxis	214
Anaphylactoid Reactions	218
Anaphylaxis and Immunity	218
Bacterial Hypersensitivity	219
Bacterial Allergy and Immunity	219
The Shwartzman Phenomenon	221
Hypersensitivity in Man	222
Serum Sickness	222
Arthus Phenomenon	224
Clinical Allergies	224
Other Allergies	226
Bacterial Hypersensitivity	226
PATHOGENIC MICROORGANISMS	
XVII. AN INTRODUCTION TO THE STUDY OF INFECTIOUS DISEASE	229
Mass Infection	232
Experimental Epidemiology	237
Morbidity and Mortality	240
XVIII. THE MICROCOCCI (STAPHYLOCOCCI)	242
Staphylococcus Aureus	242
Morphology and Staining	242
Cultural Characteristics	243
Pigment Production	244
Resistance	244
Variability	245
Bacterial Metabolites	245
Antigenic Structure	247
Experimental Disease in Laboratory Animals	248
Clinical Types of Infection in Man	249
Transmission	250

CONTENTS

XV

CHAPTER	PAGE
XVIII. THE MICROCOCCI (STAPHYLOCOCCI) (<i>Continued</i>)	
Biological Products	250
Treatment	250
Prevention	251
Staphylococcus Albus	251
Staphylococcus Epidermidis Albus	251
Staphylococcus Citreus	251
Micrococcus Tetragenus	252
Cultivation	252
Variability	252
Pathogenicity	252
Sarcina Lutea	252
XIX. THE STREPTOCOCCI	255
Morphology and Staining	256
Cultural Characteristics	256
Resistance	258
Bacterial Metabolites	258
Variability	262
Antigenic Structure	262
Infections of Lower Animals	267
Clinical Types of Infection in Man	269
Transmission	272
Biological Products	273
Treatment	274
Prevention	274
XX. STREPTOCOCCAL DISEASES	278
Scarlet Fever	278
Treatment	279
Prevention	280
Erysipelas	281
Recurrent Erysipelas	282
Epidemic Sore Throat Due to Milk Infection	282
Rheumatic Fever	283
Treatment	285
Prevention	285
Puerperal Sepsis	285
Treatment	285
Prevention	285
Subacute Bacterial Endocarditis	285
Treatment	286
Prevention	286
Focal Infections	286
Rheumatoid Arthritis	286
Micro-aerophilic and Anaerobic Streptococcal Infections	287

CHAPTER	PAGE
XXI. THE PNEUMOCOCCUS AND PNEUMONIA	290
Morphology and Staining	291
Cultural Characteristics	292
Resistance	293
Variability	294
Bacterial Metabolites	296
Antigenic Structure	297
Phagocytosis	299
Spontaneous Pneumonia in Animals	299
Experimental Pneumococcal Infections	300
Clinical Types of Infection in Man	300
Recurrent Pneumonia	303
Blood Cultures in Pneumonia	303
Mortality	304
Transmission	304
Biological Products	305
Treatment	305
Prevention	306
XXII. INFECTIONS CAUSED BY HEMOPHILUS INFLUENZAE AND OTHER OR- GANISMS OF THE HEMOPHILIC GROUP	309
Hemophilus Influenzae Infections	310
Morphology and Staining	310
Cultural Characteristics	311
Resistance	312
Variability	312
Bacterial Metabolites	312
Antigenic Structure	313
Experimental Disease in Laboratory Animals	314
Clinical Infections in Man	314
Transmission	315
Biological Products	315
Treatment	315
Prevention	317
The Koch-Weeks Bacillus and Contagious Conjunctivitis	317
Hemophilus Suis and Influenza in Swine	317
Hemophilus Canis	318
Hemophilus Parainfluenzae and Clinical Infections	318
XXIII. HEMOPHILUS PERTUSSIS AND WHOOPING COUGH, HEMOPHILUS DUCREYI AND CHANCROID	320
Hemophilus Pertussis	320
Morphology and Staining	321
Cultural Characteristics	321
Resistance	322
Variability	322

CONTENTS

xvii

CHAPTER

PAGE

XXIII. HEMOPHILUS PERTUSSIS (*Continued*)

Bacterial Metabolites	323
Antigenic Structure	323
Experimental Disease in Laboratory Animals	324
Clinical Infections in Man	325
Transmission	325
Biological Products	326
Treatment	326
Prevention	326
Hemophilus Para-Pertussis	326
Hemophilus Bronchisepticus	327
Moraxella Lacunata	327
Morphology and Staining	327
Cultural Characteristics	328
Pathogenicity	328
Hemophilus Ducreyi	328
Morphology and Staining	328
Cultural Characteristics	328
Resistance	329
Antigenic Structure	329
Experimental Disease in Laboratory Animals	329
Clinical Disease in Man	329
Transmission	330
Biological Products	330
Treatment	330
Prevention	330

XXIV. THE NEISSERIA GROUP OF ORGANISMS AND EPIDEMIC CEREBRAL

MENINGITIS	332
Neisseria Meningitidis	333
Morphology and Staining	333
Cultural Characteristics	334
Resistance	334
Variability	335
Bacterial Metabolites	335
Antigenic Structure	336
Experimental Disease in Laboratory Animals	337
Clinical Types of Disease in Man	337
Biological Products	339
Treatment	339
Transmission	339
Prevention	340
Other Gram-Negative Micrococci	340
Neisseria Catarrhalis	340
Neisseria Flava	341

CHAPTER	PAGE
XXIV. THE NEISSERIA GROUP (<i>Continued</i>)	
Neisseria Sicca	342
Neisseria Mucosa	342
Neisseria Flavescens	342
XXV. NEISSERIA GONORRHOEAE AND GONOCOCCAL INFECTIONS	344
Morphology and Staining	344
Cultural Characteristics	345
Resistance	347
Variability	347
Bacterial Metabolites	347
Antigenic Structure	348
Experimental Disease in Laboratory Animals	348
Clinical Types of Infection in Man	349
Transmission	350
Biological Products	350
Treatment	351
Prevention	351
XXVI. CORYNEBACTERIUM DIPHTHERIAE AND DIPHTHERIA	353
Corynebacterium Diphtheriae	353
Morphology and Staining	354
Cultural Characteristics	356
Pigment Production	357
Resistance	357
Variability	358
Bacterial Metabolites	359
Antigenic Structure	361
Experimental Disease in Laboratory Animals	362
Clinical Types of Infection in Man	363
Transmission	365
Biological Products	368
Treatment	368
Prevention	370
Corynebacterium Pseudodiphtheriticum (Pseudodiphtheria Bacillus)	370
Morphology and Staining	371
Cultural Characteristics	371
Corynebacterium Xerose	371
Morphology	371
Cultural Characteristics	372
Differentiation	372
The Diphtheroid Bacilli	372
XXVII. MYCOBACTERIUM TUBERCULOSIS AND TUBERCULOSIS	375
Morphology and Staining	378
Cultural Characteristics	381

CONTENTS

XXVII.	MYCOBACTERIUM TUBERCULOSIS AND TUBERCULOSIS (<i>Continued</i>)	383
	Resistance	383
	Pigmentation	384
	Odor	384
	Variability	384
	Bacterial Metabolites	386
	Tuberculin	386
	Antigenic Structure	390
	Experimental Disease in Laboratory Animals	390
	Clinical Types of Infection in Man	392
	Transmission	394
	Biological Products	397
	Treatment	398
	Prevention	398
XXVIII.	MYCOBACTERIUM LEPRAE AND LEPROSY	404
	Mycobacterium Leprae.	404
	Morphology and Staining	406
	Cultivation	406
	Bacterial Metabolites	406
	Antigenic Structure	408
	Experimental Disease in Laboratory Animals	408
	Clinical Types of Infection in Man	409
	Transmission	410
	Treatment	411
	Prevention	411
	Diseases of Lower Animals	411
	Rat Leprosy	412
	Johne's Disease	412
	Vole Tuberculosis	413
XXIX.	MALLEOMYCES MALLEI AND GLANDERS, MALLEOMYCES PSEUDOMALLEI AND MELIOIDOSIS	416
	Malleomyces Mallei and Glanders	416
	Morphology and Staining	416
	Cultural Characteristics	416
	Resistance	417
	Bacterial Metabolites	417
	Antigenic Structure	417
	Disease in Animals	418
	Clinical Types of Infection in Man	419
	Transmission	420
	Biological Products	420
	Treatment	420
	Prevention	421
	Malleomyces Pseudomallei and Melioidosis	421

CHAPTER	PAGE
XXX. <i>KLEBSIELLA PNEUMONIAE</i> AND RELATED ORGANISMS	423
<i>Klebsiella Pneumoniae</i>	424
Morphology and Staining	424
Cultural Characteristics	425
Resistance	425
Variability	425
Bacterial Metabolites	425
Antigenic Structure	425
Experimental Disease in Laboratory Animals	426
Clinical Types of Infection in Man	426
Treatment	427
<i>Klebsiella Rhinoscleromatis</i> and <i>Rhinoscleroma</i>	427
<i>Klebsiella Ozaenae</i> and <i>Ozena</i>	428
The <i>Perez Bacillus</i> and <i>Ozena</i>	428
<i>Donovani Granulomatis</i> and <i>Granuloma Inguinale</i>	428
XXXI. THE COLON-AEROGENES-PROTEUS GROUP	431
The Colon Group	433
Morphology and Staining	433
Cultural Characteristics	433
Resistance	434
Variability	435
Bacterial Metabolites	435
Antigenic Structure	435
Experimental Disease in Laboratory Animals	436
Clinical Types of Infection in Man	436
Transmission	437
Treatment	437
Prevention	437
<i>Escherichia Freundii</i>	437
Paracolon Bacilli	438
The Aerogenes Group	438
<i>Aerobacter Aerogenes</i>	438
<i>Aerobacter Cloacae</i>	438
Special Differential Tests Used in the Examination of Organisms from Water	439
The Proteus Group	440
<i>Proteus Morganii</i>	440
XXXII. <i>SALMONELLA</i> AND <i>SALMONELLOSIS</i>	443
Morphology and Staining	444
Cultural Characteristics	444
Resistance	447
Variability	448
Bacterial Metabolites	448
Antigenic Structure	448

The Colony	827
Spores	827
Methods of Studying Fungi	828

LXV. ACTINOMYCETES AND ACTINOMYCOSIS, NOCARDIOSIS, ERYTHRASMA AND TRICHOMYCOSIS

Actinomycosis	831
Morphology	831
Cultural Characteristics	833
Resistance	833
Fungus Metabolites	833
Antigenic Structure	833
Experimental Infection in Laboratory Animals	835
Clinical Types of Infection in Man	835
Method of Transmission	835
Treatment	836
Nocardiosis	836
Morphology	837
Cultural Characteristics	837
Resistance	838
Fungus Metabolites	838
Antigenic Structure	839
Pathogenicity	839
Clinical Types of Infection in Man	839
Method of Transmission	839
Biological Products	839
Treatment	840
Erythrasma	840
Trichomycosis	840

LXVI. FUNGUS DISEASES INVOLVING THE INTERNAL ORGANS

Cryptococcosis	843
Morphology	843
Cultural Characteristics	844
Resistance	844
Fungus Metabolites	844
Antigenic Structure	845
Spontaneous Infection in Animals	845
Experimental Infections in Laboratory Animals	845
Clinical Types of Infection in Man	845
Transmission	846
Treatment	846
Moniliasis	846
Morphology	847
Cultural Characteristics	847

LXVI. FUNGUS DISEASES INVOLVING THE INTERNAL ORGANS (*Continued*)

Fungus Metabolites	848
Antigenic Structure	848
Experimental Infection in Laboratory Animals	850
Clinical Types of Infection in Man	850
Transmission	850
Biological Products	851
Treatment	851
Prevention	851
Blastomycosis (North American)	851
Morphology	852
Cultural Characteristics	852
Resistance	853
Fungus Metabolites	853
Antigenic Structure	853
Spontaneous Disease in Animals	853
Experimental Infection in Laboratory Animals	853
Clinical Types of Infection in Man	853
Transmission	854
Biological Products	854
Treatment	854
Blastomycosis (South American)	855
Morphology	855
Cultural Characteristics	855
Resistance	856
Fungus Metabolites	856
Antigenic Structure	856
Experimental Infection in Laboratory Animals	857
Clinical Types of Infection in Man	857
Transmission	857
Treatment	857
Coccidioidomycosis	858
Morphology	858
Cultural Characteristics	859
Resistance	860
Fungus Metabolites	860
Antigenic Structure	860
Spontaneous Infection in Animals	860
Experimental Infection in Laboratory Animals	860
Clinical Types of Infection in Man	860
Transmission	861
Treatment	861
Prevention	861
Histoplasmosis	861
Morphology	862
Cultural Characteristics	862

LXVI. FUNGUS DISEASES INVOLVING THE INTERNAL ORGANS (<i>Continued</i>)	
Resistance	863
Fungus Metabolites	863
Antigenic Structure	863
Spontaneous Infection in Animals	864
Experimental Infection in Laboratory Animals	864
Clinical Types of Infection in Man	865
Transmission	865
Treatment	866
Geotrichosis	866
Morphology	866
Cultural Characteristics	866
Resistance	867
Fungus Metabolites	867
Clinical Types of Infection in Man	867
Transmission	867
Treatment	867
LXVII. FUNGUS DISEASES INVOLVING SKIN AND SUBCUTANEOUS TISSUES	872
Sporotrichosis	872
Morphology	872
Cultural Characteristics	872
Resistance	873
Fungus Metabolites	873
Antigenic Structure	873
Spontaneous Infections in Animals	874
Experimental Infection in Laboratory Animals	874
Clinical Types of Infection in Man	874
Transmission	874
Biological Products	874
Treatment	874
Chromoblastomycosis	875
Morphology	875
Cultural Characteristics	875
Resistance	877
Fungus Metabolites	877
Antigenic Structure	877
Spontaneous Infections in Animals	878
Experimental Infection in Laboratory Animals	878
Clinical Types of Infection in Man	878
Transmission	878
Treatment	878
Maduromycosis	879
Morphology	879
Cultural Characteristics	879
Resistance	880

LXVII. FUNGUS DISEASES INVOLVING SKIN AND SUBCUTANEOUS TISSUES

CHAPTER

PAGE

LXIX. MISCELLANEOUS MYCOSES (<i>Continued</i>)	
Clinical Types of Infection in Man	901
Transmission	901
Treatment	902
Mucormycosis	902
Penicilliosis	902
TECHNICAL METHODS OF BACTERIOLOGY, IMMUNOLOGY AND SEROLOGY	
LXX. MICROSCOPIC STUDY AND STAINING OF BACTERIA	904
In the Living State	904
Darkfield Illumination	904
In Fixed Preparations	904
Staining	905
Solubilities of Dyes	905
Staining Methods	905
Gram's Stain	905
Stains for Acid-fast Bacteria	906
Stains for Corynebacteria	907
Stains for Fungi	908
Stains for Negri Bodies	908
Stains for Rickettsiae	908
Stains for Spirochetes	909
Stains for Bacteria in Tissues	910
Stains for Capsules	910
Stains for Flagella	910
Stains for Spores	911
LXXI. THE PREPARATION OF CULTURE MEDIA	912
General Technique	912
Indicators Used in Culture Media	915
Composition and Preparation of Culture Media	915
The Embryonated Hen's Egg as a Culture Medium	921
LXXII. METHODS USED IN THE CULTIVATION OF BACTERIA	924
Inoculation of Media	924
Isolation of Bacteria in Pure Culture	924
Methods for Reduction of Oxygen Tension	926
Anaerobic Methods	927
Incubation of Cultures	927
LXXIII. METHODS OF DETERMINING BIOLOGICAL ACTIVITIES OF BACTERIA;	
ANIMAL EXPERIMENTATION	929
Gas Formation	929
Acid and Alkali Formation by Bacteria	929
Indol Production by Bacteria	929

CHAPTER	PAGE
LXXIII. METHODS OF DETERMINING BIOLOGICAL ACTIVITIES OF BACTERIA; ANIMAL EXPERIMENTATION (<i>Continued</i>)	
Cholera Red Reaction	930
Phenol Production	930
Reducing Powers of Bacteria	930
Enzyme Action	930
Animal Experimentation	930
Bleeding of Animals	931
LXXIV. FILTRATION AND MISCELLANEOUS METHODS	932
Cleaning of Filters	933
Tests of Retentive Properties of Filters	933
Preparation of Material for Filtration	933
Ultrafiltration	933
Elford's Ultrafilters	933
Graded Ultrafilters of Krueger and Ritter	933
LXXV. METHODS OF SEROLOGY AND IMMUNOLOGY	934
Determination of the L.D. ₅₀	934
Serological Methods	935
Neutralizing Antibodies	935
Agglutination	936
Agglutinin Absorption	938
Precipitin Test	938
Opsonins	939
Hirst-Agglutination-Inhibition Test	939
Complement-fixation	940
LXXVI. COLLECTION AND EXAMINATION OF MATERIAL FROM PATIENTS AND CADAVERS	945
Examination of Specimens	945
Blood Cultures	945
Examination of Feces	946
Examination of Genital Lesions	946
Pericardial, Peritoneal, or Pleural Exudates	946
Pus	946
Spinal Fluid	946
Examination of Sputum	947
Throat Smears and Throat Examinations	947
Examination of Urine	947
Necropsy Bacteriology	947
LXXVII. IN VITRO TESTING OF SULFONAMIDES AND ANTIBIOTICS	949
Tests for Sulfonamide Sensitivity	949
Tests for Penicillin Sensitivity	949
Tests for Streptomycin Sensitivity	950
INDEX	953
