Foreword to First Edition xii

Acknowledgements to Second Edition xiii

Acknowledgements to First Edition xiv

Introduction and Additional Reading xv

1	Initial preparations	1
1.1	Introduction to practical immunology	1
1.2	Antigens	1
1.2.1	Erythrocytes	1
1.2.2	Soluble antigens (ammonium sulphate precipitation)	1
	a Fowl gamma globulin (F ₇ G)	1
	b Keyhole limpet haemocyanin (KLH)	3
	c Mouse gamma globulin ^{1,2,3}	3
	d Rabbit gamma globulin and human serum albumin (HSA)	3
1.2.3	Rapid 'dialysis' of proteins (desalting)	3
1.3	Hapten-carrier conjugates	5
1.3.1	Dinitrophenyl-F ₇ G or KLH	5
1.3.2	Para-aminobenzyl HSA and F ₇ G	7
1.4	Antisera	8
1.4.1	Freund's adjuvant	8
1.4.2	Rabbit anti-mouse γ globulin	8
1.4.3	Interfacial ring test	9
1.4.4	Alum precipitation of antigens	9
1.4.5	Rabbit anti-F ₇ G	10
1.4.6	Rabbit anti-human whole serum and serum albumin	10
1.4.7	Goat or sheep anti-rabbit γ globulin	10
1.5	Hapten-carrier primed mice	10
1.6	Preparation of fluorochrome conjugated antisera	11
1.6.1	Conjugation technique	11
1.6.2	Calculation of fluorochrome: protein ratio	12
1.6.3	Fractionation of fluorochrome conjugated antisera	12
1.6.4	Indirect v. direct immunofluorescence	13
1.6.5	Standardization of fluorochrome conjugated antisera	14
1.6.6	Specificity of immunofluorescent staining	14
1.7	Basic cell techniques	17
1.7.1	Preparation of lymphocytes from blood	17
1.7.2	Defibrination of blood	18
1.7.3	Preparation of lymphocytes from solid lymphoid organs	19
1.7.4	Removal of phagocytic cells	19

1.7.5	Peritoneal exudate cells	21
1.8	Animals	22
1.8.1	Rabbits	22
1.8.2	Mice	22
1.8.3	X-irradiation of mice	23
2	The lymphocyte: its rôle and function	24
2.1	What is a lymphocyte?	24
2.2	Lymphoid organs of the mouse	24
2.3	The small lymphocyte	26
2.3.1	Morphology of thymus and blood leucocytes	26
	a Blood film	26
	b Smears of cell suspensions	27
2.3.2	May-Grünwald/Giemsa staining	28
2.4	Viable lymphocyte count	29
2.4.1	Dye exclusion test	30
2.4.2	Cell counts with a haemocytometer	31
2.5	Lymphocyte surface membrane	31
2.5.1	Immunofluorescent staining of lymphocyte membranes	33
2.6	Antigen-binding lymphocytes	37
2.6.1	Sheep red blood cell rosettes	37
2.7	T and B lymphocyte receptors	40
2.7.1	Range of receptors	40
	a Antigen receptors	40
	b Fc and complement receptors (binding sites)	41
2.7.2	Lymphocyte receptors for antigen	41
2.7.3	Demonstration of Fc receptors on lymphocytes	41
2.8	Mobility of the lymphocyte surface membrane	43
2.8.1	Capping of lymphocyte receptors	43
2.8.2	Experiments with 'capped' lymphocytes	46
2.8.3	Resynthesis of surface receptors	46
2.9	Differential mobility of membrane components	49
2.9.1	Capping of unrelated membrane components	49
2.10	Summary and conclusions	50
3	Lymphocytes and effector cells	52
3.1	B-effector cells	53
3.1.1	Plasma cells and antibody production (Anti-F ₇ G)	53
	a Frozen sections	53
	b Isolated cells	54
	c Staining for antibody-producing cells	54
	d Staining technique	55
	e Antigen binding	56
3.1.2	Enumeration of antibody secreting cells <i>in vitro</i>	57
3.1.3	Reverse plaque assay using protein A coated erythrocytes	60
3.1.4	Effect of antibody <i>in vivo</i>	63
3.2	T effector cells	64
3.2.1	Assays of delayed hypersensitivity <i>in vivo</i>	65

- 3.2.2 Graft rejection 66
 - a Skin graft rejection 66
 - b Immunological nature 67
- 3.2.3 Host rejection (graft versus host reaction) 68
- 3.3 Summary and conclusions 72

4 Cellular dynamics *in vivo* 73

- 4.1 Innate immunity 73
- 4.1.1 Particle clearance by the reticuloendothelial system 73
- 4.1.2 Data presentation 74
 - a Arithmetic mean 75
 - b Standard deviation 75
 - c Additional notes 77
- 4.1.3 Neutrophil function tests 78
- 4.1.4 Reticuloendothelial blockade 81
- 4.2 T-B cooperation 83
- 4.3 Tolerance 85
- 4.3.1 Tolerance v. selective unresponsiveness 86
- 4.4 Autoimmunity 87
- 4.5 Hypersensitivity states 88
- 4.5.1 Anaphylactic hypersensitivity 88
 - a *In vivo* 88
 - b *In vitro* 88
- 4.5.2 Cytotoxic hypersensitivity 90
- 4.5.3 Immune complex-mediated hypersensitivity 90
- 4.6 Summary and conclusions 91

5 Antibody interaction with antigen 93

- 5.1 Antibody specificity 93
- 5.2 Primary binding reactions 94
- 5.2.1 Ammonium sulphate precipitation (Farr) assay 94
- 5.2.2 Modified ammonium sulphate precipitation assay 96
 - a Radiolabelling of antigen 96
 - b Assay 97
- 5.2.3 Determination of antibody affinity 98
- 5.2.4 Equilibrium dialysis 105
- 5.3 Secondary interactions—precipitation 107
- 5.3.1 Quantitative precipitation test 107
- 5.3.2 Demonstration of antibody specificity 112
- 5.3.3 Precipitation in gels 113
 - a Single radial immunodiffusion 114
 - b Double diffusion in two dimensions 117
 - c Relative antigen concentration 121
 - d Estimation of molecular weight and diffusion coefficient 121
 - e Nephelometry 122
- 5.3.4 Immunoelectrophoretic analysis 122
 - a Agar gel electrophoresis 122
 - b Immunoelectrophoresis 124
 - c Cross-over electrophoresis 128
 - d Electrophoresis in antibody-containing media 129

5.4	Secondary interactions—agglutination	131
5.4.1	Haemagglutination	131
	a Primary versus secondary antibody response	134
	b Change in antibody titre with repeated antigenic challenge	134
5.4.2	Agglutination of antigen-coated erythrocytes	135
	a Tanned erythrocytes	135
	b Assay procedure	136
5.4.3	Latex agglutination	137
5.4.4	Blood grouping	139
5.4.5	Rhesus incompatibility	139
5.5	Summary and conclusions	140
6	Antibody effector systems	142
6.1	Complement	142
6.1.1	Total haemolytic complement	142
6.1.2	Standardization of erythrocytes	143
6.1.3	Complement assay—estimation of CH ₅₀	144
6.2	Classical and alternative pathway of complement fixation	145
6.2.1	Assay for C3	145
6.2.2	Anti-C3 serum	146
6.2.3	Single radial immunodiffusion assay for C3	146
6.2.4	Analysis of C3 activation	147
6.2.5	Two-dimensional immunoelectrophoresis	147
6.3	Detection of antibody or antigen by complement fixation	149
6.3.1	Quantitative complement fixation assay	149
6.4	Detection of antigen-antibody complexes by anti-C3 immunofluorescence	152
6.5	Opsonic and immune adherence to phagocytic cells	153
6.6	Summary and conclusions	155
7	Isolation and structure of immunoglobulins	156
7.1	Salt fractionation	156
7.1.1	Rapid concentration of light chains	157
7.1.2	Effect of protein concentration on salt-induced precipitation	158
7.2	Size fractionation	158
7.2.1	Principles of molecular sieving	158
7.2.2	Applications of gel chromatography	160
7.2.3	Basic column technique	161
7.2.4	Fractionation of serum on G-200 Sephadex	162
7.2.5	Ultracentrifugation	165
7.2.6	Polyacrylamide gel electrophoresis in SDS	166
7.3	Ion exchange chromatography	169
7.3.1	Batch preparation of rabbit IgG with DEAE cellulose	169
7.3.2	Examination of IgG preparation	171
7.3.3	Column preparation of IgG with an ionic strength gradient	171
7.3.4	Class experiments with ion exchangers	175
7.3.5	QAE-Sephadex isolation of IgG	177
7.4	Preparative electrophoresis	179
7.4.1	Pevikon block electrophoresis	179
7.4.2	Elution of protein bands	180
7.4.3	Estimation of protein yield	181

- 7.5 Isoelectric focusing 182
- 7.5.1 pH gradient 182
- 7.5.2 Preparative isoelectric focusing 182
- 7.5.3 Analytical isoelectric focusing 184
- 7.6 Structure of immunoglobulin molecules 188
- 7.6.1 Reduction of IgG to heavy and light chains 188
- 7.6.2 Detection of light- and heavy-chain determinants 191
- 7.7 Cleavage of IgG by proteolytic enzymes 192
- 7.7.1 Papain digestion 192
- 7.7.2 Pepsin digestion 196
- 7.8 Summary and conclusions 199
- 7.8.1 Isolation of immunoglobulins 199
- 7.8.2 Structure of IgG 199
- 7.8.3 Structure of IgM 199
- 7.8.4 Structure of IgA 200

8 Affinity chromatography 203

- 8.1 Purification of antibodies 203
- 8.1.1 Preparation of immunoadsorbent 204
- 8.1.2 Use of immunoadsorbent for antibody purification 205
- 8.1.3 Calculation of recovery from immunoadsorbent 207
- 8.1.4 Elution conditions 209
- 8.1.5 Practical applications of immunoadsorbents 210
- 8.2 Affinity chromatography of lymphoid cells 210
- 8.2.1 B cell depletion for T cell enrichment 210
 - a Anti-immunoglobulin columns 210
 - b Nylon wool columns 212
- 8.2.2 Antigen-specific cell depletion and enrichment 213
- 8.2.3 Preparation of antigen immunoadsorbent 214
- 8.2.4 Determination of antigen reactive cells in depleted and enriched populations 215
- 8.3 General technique for specific cell fractionation 217
- 8.4 Fluorescence activated cell sorter 218
- 8.5 Isolation of IgG and IgM 220
- 8.5.1 Preparation of IgM on protamine—Sephacrose 220
- 8.5.2 Preparation of IgG on protein A—Sephacrose 222
- 8.5.3 Isolation of IgG subclasses using protein A—Sephacrose 223
 - a Mouse 223
 - b Human 224
- 8.6 Summary and conclusions 225

9 Immunochemical methods 226

- 9.1 Quantitation of immune complexes 226
- 9.1.1 Precipitation of immune complexes by polyethylene glycol 227
- 9.1.2 Clq solid phase assay for immune complexes 228
 - a Preparation of human Clq 228
 - b Immune complex assay 229
- 9.2 Avidity determination 231
- 9.3 Radioimmunoassay 233
- 9.3.1 Radioimmunoassay of human IgG 234

- 9.4 Enzyme linked immunosorbent assays 237
- 9.4.1 Conjugation of horseradish peroxidase to immunoglobulin 237
- 9.4.2 Immunosorbent assay 238
- 9.5 Radiolabelling techniques 239
- 9.5.1 Iodination of proteins: chloramine T method 240
- 9.5.2 Iodination of proteins: iodogen method 241
- 9.5.3 Biosynthetic labelling of hybridoma-derived antibody 242
- 9.5.4 Cell surface iodination: lactoperoxidase technique 243
- 10 Techniques in cellular immunology 245**
- 10.1 T-B cooperation with hapten-carrier conjugates 245
- 10.1.1 Assay for DNP plaque-forming cells 245
- 10.1.2 Trinitrophenylation of erythrocytes 246
- 10.1.3 DNP Fab', anti-sheep erythrocyte sensitization 247
 - a Sensitization of indicator cells 248
 - b Preparation of assay chambers 250
- 10.1.4 Anti-DNP assay 250
- 10.2 Hapten-carrier cooperation with a heterologous carrier 253
- 10.3 Lymphocyte circulation 254
- 10.3.1 Ontogenic migration patterns 255
- 10.3.2 Lymphocyte 'homing' 256
- 10.3.3 Intra-organ distribution of cells 257
- 10.4 Manipulation of the immune system 257
- 10.4.1 Suppression of the immune response by X-irradiation 257
- 10.4.2 Radioresistance 258
- 10.5 Surgical and chemical manipulation of the lymphoid system 260
- 10.5.1 Surgical bursectomy 260
- 10.5.2 Surgical thymectomy 262
 - a Neonatal thymectomy of the mouse 262
 - b Neonatal thymectomy of chickens 263
 - c Adult bursectomy and thymectomy 264
- 10.6 Reconstituted mice 265
- 10.7 Thoracic duct cannulation of mice 266
- 10.8 Cell-specific antigens and antisera 268
- 10.8.1 Anti-lymphocyte serum 269
- 10.8.2 Mode of action of ALS *in vivo* 270
- 10.8.3 *In vivo* immune adherence 270
- 10.8.4 Antibodies to membrane antigens 271
- 10.8.5 Antisera to lymphocyte membrane alloantigens 272
- 10.8.6 Indirect-immunofluorescence with allosantisera 273
- 10.9 Complement-mediated cytolysis 276
- 10.9.1 Dye exclusion test 276
- 10.9.2 ⁵¹Cr-labelled cell lysis 279
- 10.10 Autoradiographic labelling of lymphocytes 280
- 10.11 T lymphocytes *in vitro* 285
- 10.11.1 Mitogenic response 285
- 10.11.2 Microculture technique 289
- 10.11.3 Mixed lymphocyte reaction (MLR) 290
- 10.11.4 Cell-mediated cytotoxicity 291

10.11.5	MLR and cell-mediated cytotoxicity (CMC)	291
10.11.6	CMC with PHA blasts	293
10.12	Soluble factors produced by lymphocytes	294
10.12.1	Macrophage migration inhibition	295
10.12.2	Interferons	296
10.13	Antibody-dependent cell-mediated cytotoxicity	298
10.14	Enumeration of human T and B lymphocytes	301
11	Hybridoma cells and monoclonal antibody	303
11.1	Outline of technique	303
11.2	Maintenance of plasmacytoma lines	306
11.3	Target cells for fusion	307
11.4	Fusion protocol	308
11.4.1	Preparation of stock solutions of HAT medium	311
11.4.2	Use of HAT medium	312
11.4.3	Preparation of macrophage feeder layers	313
11.5	Screening of fusion wells for antibody activity	314
11.5.1	Solid phase radioimmunoassay for cell-surface antigens	314
11.6	Cloning of hybrids	317
11.6.1	Cloning in soft agar	318
11.6.2	Cloning by limiting dilution	319
11.7	Initiation and maintenance of cell lines	320
11.8	Antibody purification	321
11.8.1	Antigen immunoadsorbents	321
11.8.2	Cell surface immunoadsorbents	321
11.8.3	Isolation of immunoglobulin	323
11.9	Practical applications of monospecific antibodies	324
11.10	Summary and conclusions	326

Appendixes

I	Buffers and media	328
II	Equipment and manufacturers' index	341
III	Summary tables of useful immunochemical data	346
