

CONTENTS

Preface	xiii
Acknowledgments – First Edition	xv
Acknowledgments – Second Edition	xvii
Abbreviations	xix

1 CLASSIFICATION OF BIOLOGICAL STRUCTURES

Overview	1
Basic Chemistry	1
Macromolecules	10
Solubility	25
Cell Structure	31
Genetic Material	32
Summary	53
References	54
Bibliography	56

2 DIGESTION AND ABSORPTION

Overview	57
Digestive Tract	57
Secretion of Digestive Materials	60
Stimulation of the Digestive System	66
Molecules Important to Digestion and Absorption	69
Digestion and Absorption of Proteins	88
Digestion and Absorption of Lipids	91
Digestion and Absorption of Carbohydrates	103
Absorption Physiology	117
Biochemical Mechanisms	121
Summary	128
References	128
Bibliography	131

3 NUTRIENTS THAT RESIST OR ESCAPE DIGESTION

Overview	133
Resistance of Proteins to Digestion	134
Carbohydrates that Escape Digestion	136
Dietary Fibers	140
Microorganisms and Digestion	147
Malabsorption Syndromes	151
Summary	152
References	153
Bibliography	154

4 REGULATION OF ENERGY METABOLISM

Overview	157
The Brain and Energy Metabolism	160
Glucagon and Insulin	161
Different Types of Energy Metabolism	180
Exercise Nutrition	195
Creatine Phosphate	201
Creatinine	202
Glycogen	206
Gluconeogenesis	207
Fructose	211
Fatty Acids	212
The Krebs Cycle	228
Fermentative and Aerobic Energy Metabolism	233
Starvation	243
Alcohol	245
Metabolic Zoning in the Liver	252
Thiol Esters	253
Summary	255
References	258
Bibliography	262

5 ENERGY REQUIREMENT

Overview	273
Units of Energy	274
Calculating the Respiratory Quotient from Chemistry	276
Electron Transport and ATP Production	278
Tally of the ATPs Produced	282
The Respiratory Quotient during Rest and Exercise	287
Fatty Acid Biosynthesis	288
Respiratory Quotient Data from Human Studies	293
Protein Oxidation and the Respiratory Quotient	295
Calculating Energy Expenditures	297

Direct Calorimetry	300
Metabolic Rate	301
Doubly Labeled Water Technique for Determining Energy Expenditure	303
Issues in Energy Nutrition	305
References	307
Bibliography	308

6 LIPIDS

Overview	311
Phospholipids	312
Choline and Ethanolamine	316
Influence of Dietary Fats on Phospholipids in the Body	320
Sphingosine-Based Lipids	322
Covalent Binding of Lipids to Proteins	325
Cholesterol	326
Lipoproteins	332
Studies on the Behavior of Lipoproteins	345
Cardiovascular Disease	357
Effects of Diet and Drugs on Atherosclerosis	361
References	371
Bibliography	376

7 OBESITY

Overview	379
Types of Fat	383
Techniques for Measuring Fat	388
Signaling Pathways for Regulating Adipocyte Formation	399
Genetic Factors in Obesity	401
Summary	411
References	412
Bibliography	414

8 PROTEIN

Overview	421
Milk Protein	424
Amino Acid Catabolism and Aminotransferases	425
Biosynthesis of Dispensable Amino Acids	435
Waste Nitrogen	436
Regulation of Protein Catabolism	444
Nutritional Aspects of Protein Catabolism	447
Protein Quality	469
Clinical Issues in Protein Nutrition	475
References	482
Bibliography	487

9 VITAMINS

Overview	491
Folate	493
Vitamin B ₁₂	516
Vitamin K	524
Biotin	539
Vitamin B ₆	541
Vitamin A	554
Vitamin D	565
Vitamin A, Vitamin D, and Thyroid Hormone at the Genome	585
Niacin	593
Thiamin	603
Riboflavin	609
Pantothenic Acid	613
Ascorbic Acid (Vitamin C)	617
Vitamin E	628
Essential Fatty Acids	638
References	657
Bibliography	668

10 INORGANIC NUTRIENTS

Overview	693
Tables of Inorganic Nutrients	694
Sodium, Potassium, Chloride, and Water	697
Iodine	731
Iron	739
Calcium and Phosphate	761
Magnesium	794
Manganese	802
Zinc and Copper	803
Molybdenum, Sulfite, and Sulfate	819
Selenium and Glutathione	825
Other Inorganic Nutrients	840
References	841
Bibliography	852

11 DIET AND CANCER

Overview	879
Cancer of the Large Bowel	882
Genetic Changes that Result in Cancer	885
RAS and the MAP Kinase Signaling Pathway	898
Mutations in the RAS Gene and Cancer	902
Cadherin Protein	905
Epidemiology of Diet and Colon Cancer	907
Summary	917
References	917
Bibliography	921

APPENDIX A: NUTRITION METHODOLOGY

References/Bibliography	933
-------------------------	-----

**APPENDIX B: DOT BLOTS, MOLECULAR CLONING,
AND DNA SEQUENCING**

Assessing Metabolic Regulation by Measuring Changes in Enzyme Activity	935
Assessing Metabolic Regulation by Measuring Levels of Messenger RNA (Dot Blots)	936
Using Drug Resistance as a Selection Technique	946
Restriction Sites and Restriction Enzymes	947
Phages, Phagemids, and Plasmids Are Used to Acquire DNA for Sequencing	949
Phages, Plasmids, and Phagemids	950
Properties of Phage Lambda and of Filamentous Phage	954
Sequencing of DNA	956
Summary	960
References/Bibliography	962

APPENDIX C: METHODS AND TERMS IN EPIDEMIOLOGY

Algebra Used for Calculating Risk Ratio and Odds Ratio	965
Acquiring Data on Food and Nutrient Intake	968
References/Bibliography	969

Index	975
-------	-----
