Preface	vii
Resolution WHA28.72 of the Twenty-eighth World Health Assembly	ix
Chapter 1. Organization of a blood transfusion service	1
Importance of the blood supply	1
Organization of blood transfusion services	2
Functions of national blood transfusion services	5
Financing a blood transfusion service	9
Creating a new blood transfusion service	10
Conclusions	11
Appendix 1. Criteria for successful development of a blood transfusion service	12
Appendix 2. Guidelines for personnel needs	14
Appendix 3. Operating costs of a blood transfusion service	17
Chapter 2. Recruitment of blood donors	19
Preparatory groundwork	19
Costing and budgeting	22
Personnel	22
Donor incentives	24
Special recruitment drives and seasonal campaigns	24
Retention strategies	25
Donor records	27
Monitoring	27
Conclusions	28

Chapter 3: Blood collection	29
Donation facilities	29
Blood donors	30
Collection of blood	37
Adverse donor reactions	39
Conclusions	40
Chapter 4. Screening for transmissible diseases	42
Hepatitis	43
Acquired immunodeficiency syndrome	48
Syphilis and yaws	52
Malaria	53
Chagas disease	54
Cytomegalovirus	54
Other diseases	55
Conclusions	55
Chapter 5. Production of laboratory reagents	57
ABO blood-grouping reagents	58
Anti-D	62
Anti-human globulin	63
Red cell panels	64
Non-immunohaematological reagents used in blood group serology	65
Conclusions	66
Chapter 6. Blood group serology	67
General principles	67
Blood samples	71
ABO-grouping techniques	71
Rh(D)-grouping techniques	74
Compatibility tests	77
Investigation of haemolytic transfusion reactions	83
Haemolytic disease of the newborn	85
Identification of irregular antibodies	87
Chapter 7. Equipment and consumables	89
Blood collection	89
Storage and transport of blood and blood products	89
Basic equipment for the preparation of blood components	92
Basic equipment for laboratory methods associated with blood transfusion	93

Cleaning of glassware	100
Haemoglobin measurement	100
Stock control	101
Infusion of blood and blood products	101
Utilities	102
Waste disposal	103
Conclusions.	109
Chapter 8. Quality assurance and biosafety	110
Principles of quality assurance in blood transfusion	111
Good manufacturing practice	112
Clerical procedures.	112
Standard operating procedures, including documentation	113
Specification and quality control of reagents.	113
Quality control of techniques	124
Quality control of equipment	125
Quality control of performance	126
Quality control of tests for transmissible infectious agents	127
Quality control of blood component preparation	127
Biosafety in the transfusion laboratory.	128
Storage and transportation of blood and blood components	130
Administration of blood at the bedside.	131
Reporting system for errors	131
Educational programmes	131
Automation and computerization.	132
Conclusions.	132
Chapter 9. Clinical uses of blood and blood products	133
Introduction	133
Plasma-volume expanders	133
Indications for the use of blood and blood products.	134
Administration of blood products	142
Hazards of blood transfusion	144
Role of the hospital transfusion committee	147
Conclusions.	147
Selected reading	148
