

# Contents

## **1. MONITORING PHILOSOPHY, DISPLAYS, AND RECORDERS / 1**

*Monitor Display*

*Recorders*

*Integrated Monitoring*

## **2. CENTRAL VENOUS PRESSURE, LEFT ATRIAL PRESSURE / 15**

*Cardiac Cycle Definitions*

*Central Venous Pressure*

*Right vs. Left Atrial Pressure*

## **3. PULMONARY ARTERY PRESSURE / 27**

*Floating the Pulmonary Artery Catheter:*

*Waveform Morphologies*

*Guidelines for Catheter Placement*

*Temporal Relations: Pulmonary Artery Pressure*

## **4. PULMONARY ARTERY WEDGE PRESSURE / 39**

*What is Wedge Pressure?*

*Wedge Pressure vs. Left Atrial Pressure*

*Wedge Pressure vs. Right Atrial Pressure*

*Reporting Wedge Pressure*

*Wedge Pressure, Occlusion Pressure, and Capillary Pressure*

*Identifying Wedge Pressure in the Unwedged Pulmonary Artery Pressure Trace*

## **5. PULMONARY ARTERY AND WEDGE PRESSURE ARTIFACTS / 49**

## **6. PREDICTING LEFT VENTRICULAR END-DIASTOLIC PRESSURE / 59**

*On the Distinction Between Mean and Phasic Pressure*

## **UNDERESTIMATION OF LEFT VENTRICULAR END-DIASTOLIC PRESSURE**

*Decreased Left Ventricular Compliance*

*Aortic Valve Regurgitation*

*Pulmonic Valve Regurgitation*

*Right Bundle Branch Block*

*Reduced Pulmonary Vascular Bed*

## **OVERESTIMATION OF LEFT VENTRICULAR END-DIASTOLIC PRESSURE**

*Positive End-Expiratory Pressure*

*Pulmonary Arterial Hypertension*

*Pulmonary Veno-Occlusive Disease*

*Mitral Valve Stenosis*

*Mitral Valve Regurgitation*

*Tachycardia*

*Ventricular Septal Defect*

*Summary: Predicting Left Ventricular End-Diastolic Pressure*

## **7. ARTERIAL BLOOD PRESSURE: DIRECT VS. INDIRECT MEASUREMENT / 81**

*Why Measure Blood Pressure Directly?*

*Direct vs. Indirect Arterial Blood Pressure*

*Systolic, Diastolic, or Mean Arterial Pressure: Which to Measure? Real or Artifact?*

## **8. DIRECT ARTERIAL BLOOD PRESSURE MONITORING: NORMAL WAVEFORMS / 91**

*Waveform Components*

*Evolution of the Arterial Waveform*

## **9. TECHNICAL REQUIREMENTS FOR DIRECT BLOOD PRESSURE MEASUREMENT / 99**

*Frequency Content of the Arterial Pressure Waveform*

*Natural Frequency*  
*Damping Coefficient*  
*Adequate Dynamic Response*  
*Measuring Natural Frequency and*  
*Damping Coefficient*  
*Regarding Air Bubbles*  
*Clinical Importance of Dynamic Response*  
*Transducer Setup: Zeroing, Calibrating,*  
*and Leveling*

**10. BASIC ELECTROCARDIOGRAPHY / 127**

*Standard Lead Placement*  
*Alternative Lead Systems*  
*Invasive ECG Leads*  
*Lead Selection and Display*  
*Filter Selection*  
*Gain Adjustment*

**11. MYOCARDIAL ISCHEMIA:  
ECG DETECTION / 145**

*Patterns of Ischemia: ST-Segment Changes*  
*Patterns of Ischemia: Ancillary ECG Clues*  
*Limitations of Individual Lead Monitoring*  
*Confounding Influences During the*  
*Perioperative Period*  
*Computer-Aided ST-Segment Monitoring*

**12. MYOCARDIAL ISCHEMIA: HEMODYNAMIC  
DETECTION / 181**

*Pulmonary Artery Catheter Detection of*  
*Ischemia: Background*  
*Diastolic Dysfunction: Elevated Wedge Pressure,*  
*Prominent a Wave*  
*Systolic Dysfunction: Prominent v Wave*  
*Utility of the Wedge Pressure for Detecting*  
*Ischemia: Cause or Effect?*  
*Hemodynamic Patterns of Ischemia: Is There an*  
*Ischemic Cascade?*  
*Right Ventricular Ischemia*

**13. MONITORING HEART RATE / 205**

*Pulse Rate or Heart Rate?*

**14. ARRHYTHMIAS: AN INTEGRATED  
ECG AND HEMODYNAMIC  
APPROACH / 219**

*Atrial Fibrillation and Flutter*  
*Atrioventricular Dissociation*  
*Artifact Recognition*  
*Pacing and Atrioventricular Synchrony*  
*Atrioventricular Dysynchrony During*  
*Cardiopulmonary Bypass*

**15. PRESSURE-VOLUME RELATIONS,  
TRANSMURAL PRESSURE, AND  
PRELOAD / 247**

*Diastolic Pressure-Volume Relations*  
*Central Venous Pressure as a Measure of Left*  
*Ventricular Preload*  
*Transmural Pressure*  
*Is Preload Optimal? Use of the Fluid Challenge*

**16. RESPIRATORY-CIRCULATORY  
INTERACTIONS / 261**

*Interpreting Central Vascular Pressures*  
*During the Respiratory Cycle: Average or*  
*End-Expiratory Pressure?*  
*Detecting Pressures at End-Expiration*  
*End-Expiratory Pressure Values: Caveats*  
*Automated Measurement of Wedge Pressure*  
*Positive Pressure Ventilation: A Closer Look at*  
*Preload Effects*  
*Positive Pressure Ventilation: A Closer Look at*  
*Afterload Effects*  
*Systolic Pressure Variation: A Clinical*  
*Application of Respiratory-Circulatory*  
*Interaction*

**17. PATTERNS OF VALVULAR HEART  
DISEASE / 287**

*The Prominent v Wave: Hallmark of Tricuspid*  
*and Mitral Regurgitation*  
*v Wave Height as a Predictor of Mitral*  
*Regurgitation Severity*  
*Tricuspid Stenosis and Mitral Stenosis*  
*Aortic Stenosis and Regurgitation*

**18. PERICARDIAL CONSTRICTION AND  
CARDIAC TAMPONADE / 313**

*The Venous Waveform in Constriction  
and Tamponade*  
*Pulsus Paradoxus*

**19. HEMODYNAMIC OBSERVATIONS  
DURING CARDIOPULMONARY  
BYPASS / 327**

*Hypothermia: Osborne Waves and Other ECG  
Manifestations*

*Recognizing Left Ventricular Distention*  
*Blood Pressure Waves*

**20. INTRAAORTIC BALLOON  
COUNTERPULSATION / 343**

*IABP Timing*  
*IABP Timing Problems*  
*IABP Timing: Influences of Pressure*  
*Monitoring Site*

**INDEX / 357**
